There was, therefore, nearly three times as much imported as exported. The list of articles exported, with their prices, is interesting. Of the leading articles of to-day sugar was the only one of importance, but even this came after white birds' nests and indigo. Comparing with this the table of Dr. F. J. F. Meyen, on board the Prussian merchant ship *Princess Louise*, eleven years later, we find a great increase in exports—in the case of sugar tenfold the amount, though with hemp, again, not at all.

He gives the exports as follows:

ARTICLES.	1829.	1830.
Sugar.....piculs.	120,274	138,387
Indigo.....do.	11,809	13,863
Sapan wood.....do.	11,675	11,594
Hulled rice (114,793 cavan).....do.	191,377	a 179,532
Unhulled rice (30,830 cavan) paddy.....do.	28,027	
Rum.....gallons.	19,551	
Cigars.....kilograms.	52,843	b 48,955

a 197,486 cavan.

b 4,257 arrobas.

The remaining less important articles are omitted.

At the end of the twenties, imports and exports were practically equal:

YEAR.	Imports.	Exports.
1827.....	\$1,048,680	\$1,093,690
1828.....	1,550,933	1,475,034

Up to the seventies both had been increased more than tenfold, and the exports considerably exceeded the imports; in round numbers:

YEAR.	Imports.	Exports.
1870.....	\$11,000,000	\$16,000,000
1875.....	13,000,000	19,000,000
1880.....	17,000,000	22,000,000

The only exception is the year 1872, when the exports stood at \$16,500,000 and the imports at \$22,000,000. In 1892 the exports were \$33,000,000, the imports \$25,000,000.

It is a difficult matter to give statistics of the imported goods, since the innumerable articles are not entered separately at the custom house, but, for purposes of duty, are placed in certain classes. Some of the leading goods may be mentioned, however. From England, all Manchester articles play an important part, together with a number of less significant wares, such as hardware and leather goods. From Germany come better class textiles, tricots, hardware, paper, leather, steel and iron, machinery, etc. From Switzerland, St. Gallen laces, muslins, and silks. From France, Lyon silks, machinery for cigarette making, and paper.

From Austria, principally only Vienna furniture and Bohemian glassware. From Belgium is sent glass and glassware, iron, paper, cement, etc. From Russia and America, kerosene, and from the latter country also flour and tinned meats—as Spain exported formerly almost only preserved foods in tins—and wines. Within the last few years she has commenced to import into the Philippines other articles, to compete with the wares of other countries. The Spanish goods are in every way inferior to those of foreign manufacture, but on account of their being free from import duty the prices are considerably lower.

In the following table the exports during the last five years are given. The minor articles have been omitted:

PRINCIPAL EXPORTS FROM THE PHILIPPINES FROM JANUARY 1 TO DECEMBER 31, 1896.

To	Sugar.	Hemp.	Coffee.	Tobacco.	Cigars.	Sapan wood.	Copra.
	<i>Piculs.</i>	<i>Piculs.</i>	<i>Piculs.</i>	<i>Centals.</i>	<i>Thousands.</i>	<i>Piculs.</i>	<i>Piculs.</i>

a For the most part to Spain for the monopoly.

In the June (1893) number of the National Geographic Magazine, called "the Philippine number," are some articles about the islands. Although for the most part interesting, especially for anthropologists, they are, in economic matters, inaccurate. None of the statistics are to be depended upon, for even at the commencement, in mentioning the trade of 1896, there is an error of about twenty-eight million dollars. In 1896 the export alone was \$32,771,500. The figures given by me are correct, as, indeed, statistics can only be correct. The trade is indeed small, compared to what it should be; but amounts such as are given to the author of the magazine article were reached twenty-five years ago.

To give the statistics of the imports even only approximately correct is impossible, wherefore I have refrained altogether from giving detailed statistics in this regard. The author of the article referred to tabulates the American goods, among which wheaten flour in particular must strike the eye of anyone really knowing the conditions of the trade. He gives the value of the imports as lowest in 1893, with \$7,800, and the highest in 1896, with \$18,290, which figures are much too low. The value of the flour imported from America must be at least five or ten times as much.

The terms in the produce market in Manila are always cash down. In business with the provinces the Manila house has frequently to make advances, which certainly means risk; but if one is cautious with whom one deals the business is safe enough here also. It is always the main thing in the case of transmarine places just springing up to know the state of affairs precisely, and to be in a position to form a sound judgment at a moment's notice. The business between the importers and the Chinese retail dealers is done either by means of acceptance (*pagaré*) at six months, or, as is more general of late, cash within four to six weeks, with 5 per cent discount. Unfortunately the four to six weeks are very often exceeded. Insolvencies frequently occur among the Chinese. * * *

COMMERCE OF PRINCIPAL COUNTRIES WITH THE PHILIPPINES.

[From reports of the Bureau of Foreign Commerce, Department of State.]

The following statistics in regard to the imports and exports of the Philippine Islands have been compiled from official publications of the various countries mentioned. In the first table, in which an effort has been made to show the trade by countries of origin and destination, the figures for 1897 are given, except in the case of France, Germany, Belgium, India, the Straits Settlements, and Victoria. For these countries the latest figures available relate to 1896; for the trade of Spain, no later ones than those for 1895 can be obtained.

COUNTRIES.	Imports from Philippines.	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
Great Britain.....	6,223,426	2,063,598
France.....	1,990,297	359,796
Germany.....	223,720	774,928
Belgium.....	272,240	45,660
Spain.....	4,819,344	4,973,589
Japan.....	1,332,300	92,823
China.....	56,137	97,717
India.....	7,755	89,156
Straits Settlements.....	274,130	236,001
New South Wales.....	119,550	176,858
Victoria.....	180	178,370
United States.....	4,383,740	94,597
Total.....	19,702,819	9,174,693

The average value of the trade of the Philippines is greater than indicated in the above table, having suffered in the past few years on account of political conditions. As will be seen in the statements of the commerce by countries, further on, Great Britain imported from the Philippines, in 1893, to the value of \$10,607,000, and exported nearly \$1,500,000 more than the shipments in 1897. France imports three times as much as she did in 1893, but her exports have diminished in an even larger proportion, from over \$2,000,000 to \$350,000. China imports more than twice as much, but exports considerably less than in 1893. India imports less, but her exports have risen from \$57,000 to \$80,000. The Straits Settlements have lost over \$100,000 in imports and some \$140,000 in exports. The trade with New South Wales has grown, but that with Victoria has greatly diminished; and United States commerce, which was \$9,314,235 in 1893, has fallen to \$4,478,337 in 1897.

The following statements show the principal articles of import and export:

PRINCIPAL IMPORTS FROM PHILIPPINES.

COUNTRIES.	Hemp.	Tobacco.	Cocoanuts and copra.	Sugar.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Great Britain.....	3,694,214	716,767	222,401	1,512,703
France.....	76,754	86,451	1,787,198
Germany.....	166,600	31,654
Japan.....	100,993	64,477	1,156,411
India.....	4,865	3,053
Spain.....	2,533,150	413,794
United States.....	2,701,651	1,199,202
Total.....	6,745,177	3,435,552	2,009,602	4,282,110

It must not be inferred from the absence of statistics in regard to some of the above articles that there are no imports into the countries mentioned. They are either covered in the general heading "All other imports" or are classified in some other way.

PRINCIPAL EXPORTS TO PHILIPPINES.

COUNTRIES.	Cotton manufac- tures.	Silk manu- factures.	Woolen manufac- tures.	Apparel.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Great Britain.....	1,268,087	12,205	17,943	6,273
France.....	143,223	81,720	2,493	3,912
Germany.....	111,028	43,792	44,268	99,246
Japan.....	120	4,418		157
United States.....	2,164			
Total.....	1,524,622	142,135	64,704	110,588

COUNTRIES.	Machinery.	Metals, and manufac- tures of.	Coal.	Provisions.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Great Britain.....	151,650	184,413	18,656	73,455
France.....	10,453	5,035		
Germany.....	20,036	198,370		31,654
Japan.....	250	388	40,996	7,420
Total.....	181,390	387,216	57,652	118,529

Tables giving the details of trade with the various countries are given below:

COMMERCE OF GREAT BRITAIN.

The annual statement of trade of the United Kingdom for 1897 (it should be noted that the British figures cover the Ladrone Islands) has the following:

YEAR.	Imports from Philippines.	Export to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	10,607,491	3,522,061
1894.....	7,948,085	3,117,744
1895.....	7,896,918	2,023,505
1896.....	7,477,538	2,470,240
1897.....	6,223,323	1,947,598

To these exports, which represent the produce and manufactures of the United Kingdom, should be added the foreign produce which passes through British ports. The figures for these last-named exports for the years given were: In 1893, \$268,000; 1894, \$162,000; 1895, \$135,000; 1896, \$141,000; 1897, \$116,000.

IMPORTS FROM PHILIPPINES, 1897.

ARTICLES.	Value.	ARTICLES.	Value.
	<i>Dollars.</i>		<i>Dollars.</i>
Ginseng.....	31,185	Nuts and kernels for expressing oil therefrom.....	222,401
Hemp, dressed or undressed, and tow.....	3,694,214	Sugar, unrefined.....	1,512,703
Tobacco.....		All other articles.....	46,151
Unmanufactured.....	226,939	Total.....	6,223,426
Manufactured.....	489,828		

EXPORTS TO PHILIPPINES, 1897.

ARTICLES.	Value.	ARTICLES.	Value.
	<i>Dollars.</i>		<i>Dollars.</i>
Alkali.....	21,870	Machinery and millwork.....	151,659
Apparel and haberdashery.....	6,273	Metals:	
Carrriages, railway.....	4,540	Iron, wrought and unwrought.....	100,000
Coal and cinders, etc.....	16,856	Copper.....	20,583
Cotton yarn.....	169,603	Oil seed.....	10,000
Cottons:		Painters' colors and materials.....	33,423
Entered by the yard.....	962,780	Pickles, vinegar, sauces.....	1,705
Entered at value.....	133,104	Provisions.....	25,550
Earthen and china ware.....	15,719	Saddlery and harness.....	2,628
Glass manufactures, unenumerated.....	6,112	Silk manufactures.....	12,205
Hardware and cutlery.....	7,870	Woolen and worsteds.....	17,443
Hats of all sorts.....	505	All other articles.....	101,500
Leather, wrought and unwrought.....	15,018	Total.....	1,947,593
Linen, entered by the yard.....	40,095		

The principal articles of foreign produce which passed through British ports en route to the Philippines in 1897 were: Cheese, \$18,000; cotton manufactures, \$2,000; hams, \$12,000; iron and steel manufactures, \$1,500; condensed milk, \$12,000.

Indigo was formerly imported from the Philippines into Great Britain (to the value of \$39,000 in 1893), but does not appear in reports for recent years. Unwrought copper and dyewoods have also decreased in import.

COMMERCE OF FRANCE.

According to statistics published in the *Tableau Général du Commerce et de la Navigation* for the years from 1893 to 1896 (the edition for 1897 not having been received), the trade with France has been as follows:

YEAR.	Imports from Philippines.	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	694,800	2,258,100
1894.....	1,080,000	2,026,500
1895.....	1,428,200	1,697,100
1896.....	1,900,237	359,756

The details of trade in 1896 were:

IMPORTS FROM PHILIPPINES.

ARTICLES.	Value.	ARTICLES.	Value.
	<i>Dollars.</i>		<i>Dollars.</i>
Cocoanuts and kernels.....	1,787,198	Shells.....	5,536
Hemp.....	76,754	All other articles.....	3,701
Tobacco.....	80,451	Total.....	1,990,297
Gum and resins.....	22,281		
Oils, volatile, and essences.....	8,376		

EXPORTS TO PHILIPPINES.

ARTICLES.	Value.	ARTICLES.	Value.
	<i>Dollars.</i>		<i>Dollars.</i>
Cotton manufactures.....	142,297	Wine.....	5,075
Silk manufactures.....	81,721	Metals and manu. factories of.....	5,000
Woolen manufactures.....	39,813	Paper.....	4,720
Jewelry, etc.....	12,916	Apparel.....	3,002
Machinery and parts of.....	10,753	Meat.....	3,667
Copper and manu. factories of.....	7,639	All other articles.....	20,700
Tanned hides.....	6,391	Total.....	217,785
Tobacco.....	6,263		

A much larger proportion of foreign goods, it appears, passes through French than through British ports to the Philippines. Foreign cotton goods figured in the exports for \$137,860; silk manufactures, for \$39,733; metals, for \$633; cotton thread, for \$5,363; paper, for \$1,802; and woolen manufactures, for \$2,493. The total value of foreign goods exported from France to the Philippines in 1896 was \$195,898, while the French exports amounted to \$163,898.

COMMERCE OF GERMANY.

Statistics covering only two years—1895 and 1896—are available. They are taken from the editions of *Auswärtiger Handel* for those years, and comprise the foreign products which were exported from German ports, as well as those of domestic manufacture. The large majority of the exports, however, are of German origin; the value of the foreign articles being represented by only \$29,988 in 1896. Cotton goods and groceries were the only items of importance in the transit trade. It should be noted that the German statistics include the trade with other Spanish possessions in Oceanica.

IMPORTS FROM PHILIPPINES.

ARTICLES.	1895	1896
	<i>Dollars.</i>	<i>Dollars.</i>
Dyewoods	11,662	3,332
Iron and ironwares.....		238

Pottery	8,330	20,706
All other articles	51,884	37,128
Total	762,453	774,028

COMMERCE OF SPAIN.

The figures covering Spain's trade with the Philippines are taken from Spain's Foreign Trade, Frank H. Hitchcock, Department of Agriculture, 1898. The imports and exports for the five years from 1891 to 1895 were:

YEAR.	Imports from Philippines.	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1891.....	4,342,009	2,712,515
1892.....	4,450,492	3,655,398
1893.....	4,013,643	4,378,530
1894.....	3,473,004	5,516,735
1895.....	4,819,344	4,973,589

Details of the trade by articles are not given, except in certain imports from the Philippines:

YEAR.	Tobacco.	Sugar.	Coffee.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
1891.....	2,605,987	216,909	860,481
1892.....	3,511,303	301,888	440,895
1893.....	2,632,816	272,953	153,832
1894.....	2,138,068	389,724	231,541
1895.....	2,533,150	413,794	107,656

COMMERCE OF JAPAN.

The Annual Return of Foreign Trade for 1897 has the following figures:

IMPORTS FROM PHILIPPINES.

ARTICLES.	Value.
	<i>Dollars.</i>
Coffee	3,020
Sugar.....	1,156,411
Flax, hemp, jute, and textiles.....	100,993
Cigars, cigarettes, and tobacco	64,477
All other articles.....	7,399
Total	1,332,300

EXPORTS TO PHILIPPINES.

ARTICLES.	Value.	ARTICLES.	Value.
	<i>Dollars.</i>		<i>Dollars.</i>
Cotton, and manufactures of.....	120	Fans.....	5,410
Silk, and manufactures of.....	4,418	Matchbes	7,599
Apparel and haberdashery	157	Bronze, copper, iron, and tin wares.....	398
Fish, dried and salted.....	90	Paper, porcelain, and other wares.....	12,634
Beans, rice, potatoes, and other vegetable.....	6,471	All other articles.....	12,160
Beer, liquors, and other beverages	638	Total	91,093
Coal	40,996		

To the exports should be added the values of foreign products passing through Japan in 1897, which amounted to \$1,730. Provisions figured in this total to the value of \$230; subnitrate of bismuth, \$770; and dynamo-electric machinery, \$250.

COMMERCE OF CHINA.

The Returns of Trade for 1897, issued by the imperial maritime customs, has the following details:

IMPORTS FROM AND EXPORTS TO PHILIPPINES.

YEAR.	Imports.	Exports.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	25,269	172,788
1894.....	64,443	160,175
1895.....	12,944	125,308
1896.....	13,894	103,960
1897.....	56,137	97,117

Details of the trade by articles are, unfortunately, not available.

COMMERCE OF BRITISH INDIA.

The trade for the four years ending in 1896, according to the Statistical Abstract for the Colonies of the United Kingdom, 1897, was:

IMPORTS FROM AND EXPORTS TO PHILIPPINES.

YEAR.	Imports.	Exports.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	9,017	56,979
1894.....	6,297	47,495
1895.....	8,533	69,748
1896.....	7,755	80,156

The chief articles of import and export in 1896 were:

IMPORTS FROM PHILIPPINES.

Hemp, and manufactures of	\$4,965
Tobacco, and manufactures of.....	3,053

EXPORTS TO PHILIPPINES.

Drugs and dyewoods	\$80,119
Opium	80,109

British returns estimate the value of the rupee at 2s. (48.6 cents). In making the above reductions, however, the valuation of the rupee as given by the United States Director of the Mint is taken, the average of which for 1896 was 23.4 cents. According to the British estimates, the trade of India would be more than double the values above given.

COMMERCE OF THE STRAITS SETTLEMENTS.

The figures for the trade with the Philippines, also taken from the Statistical Abstract, include other Spanish possessions in Oceania:

YEAR.	Imports from Philippines.	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	385,091	372,229
1894.....	496,442	484,134
1895.....	490,602	422,607
1896.....	274,130	236,001

COMMERCE OF NEW SOUTH WALES.

According to the New South Wales Statistical Register for 1897 the trade for the last five years has been as follows:

YEAR.	Imports from Philippines.	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	4,141	82,268
1894.....	38,844	168,687
1895.....	74,024	90,531
1896.....	87,617	125,950
1897.....	119,550	176,858

In the exports for 1897 domestic produce and manufactures figured for \$175,272; foreign produce for \$1,586.

COMMERCE OF VICTORIA.

The Statistical Abstract for the Colonies has the following:

YEAR.	Imports from Philippines. (a)	Exports to Philippines.
	<i>Dollars.</i>	<i>Dollars.</i>
1893.....	18,848	1,298,521
1894.....	472	1,350,040
1895.....	6,103	1,054,707
1896.....	180	178,370

a Including other Spanish possessions in Oceania.

COMMERCE OF UNITED STATES.

The details of the commerce of the United States with the Philippines are given elsewhere in this volume, and are therefore omitted from this compilation.

COMMERCE VIA HONGKONG.

Besides the direct trade with the Philippine Islands, a large number of articles passes via Hongkong and are credited to that port. Hongkong being a free port, no special statistics as to the extent or value of its trade are compiled. The official returns of the countries named show imports and exports in 1897 as follows:

COUNTRIES.	Imports from Hongkong.	Exports to Hongkong.
	<i>Dollars.</i>	<i>Dollars.</i>
Great Britain	2,950,627	10,120,081
United States	923,842	6,060,039
China	66,666,119	45,923,809
Japan	5,989,544	12,589,269
British India (a)	4,723,484	1,956,065
Straits Settlements (a)	10,563,152	5,860,614
New South Wales	372,132	903,227
Victoria (a)	328,848	254,533

a In 1896.

The German, French, and Spanish statistics do not mention Hongkong; but it will be seen that the trade of the other countries is very considerable, and, as the local consumption of the port is comparatively small, almost all the merchandise is transshipped. In *Commercial Relations, 1894-95* (Vol. I, p. 90), an estimate of the total trade of Hongkong for the year 1893-94 is made, which covers all the countries above mentioned, with the exception of New South Wales and Victoria, and which approximates the trade of "all other countries" at \$30,000,000 in imports from Hongkong and at \$25,900,000 in exports to Hongkong. The *Statesman's Year Book, 1898*, says that of the total imports into the Philippines about 21 per cent comes from Hongkong and Amoy. Assuming that the trade of Hongkong with "all other countries" had the same value in 1897 as in the fiscal year 1893-94 (it is probable that it increased), the importance of this addition to the trade of the Philippines is obvious.

THE SAMOAN ISLANDS.

THEIR AREA, POPULATION, FORM OF GOVERNMENT AND COMMERCE, AND THE RELATION OF THE UNITED STATES THERETO.

LOCATION, PRODUCTS, AND COMMERCE.

The Samoan Islands, to which recent events have attracted public attention, are located about 2,000 miles south and 300 miles west of the Hawaiian Islands and 14 degrees south of the equator. They lie in an almost direct line between San Francisco and Australia and slightly south of the direct steamship line connecting the Philippines with the proposed Panama or Nicaraguan interoceanic canals. Their especial importance, therefore, lies more in their position as coaling and repair stations on these great highways of commerce rather than in their direct commercial value, their population being small and their imports and exports of comparatively little importance.

The group consists of 10 inhabited and 2 uninhabited islands, with an area of 1,700 square miles and an aggregate population, according to latest estimates, of 36,000 people, of which something over 200 are British subjects, 125 Germans, 25 Americans, 25 French, and 25 of other nationalities, while the remainder are natives, of the Polynesian race. The bulk of the population is located in the three islands of Upolou, Savaii, and Tutuila; the number in Upolou being 16,600, in Savaii 12,500, and in Tutuila 3,700. The islands are of volcanic origin, but fertile, producing cocoanuts, cotton, sugar, and coffee; the most important, however, being cocoanuts, from which the "copra" of commerce is obtained by drying the kernel of the cocoanut, the "copra," which is exported to Europe and the United States, being used in the manufacture of cocoanut oil. The exportation of copra from the islands in 1896 amounted to 12,565,909 pounds, valued at \$231,372. A considerable proportion of this was exported to the United States; a larger proportion, however, to Germany, whose citizens control its commerce through a trading company which has long been established there. The cocoanut and copra production, however, varies greatly from year to year, owing to the fact that many of the cocoanut trees have been destroyed in recent wars between native factions, a single individual being able, by cutting out the crown of the tree, to permanently destroy in two minutes' time the fruit-bearing qualities of trees which require several years for their growth.

GOVERNMENT.

The government of the Samoan Islands had been from time immemorial under the two royal houses of Malietoa and Tupea, except on the island of Tutuila, which was governed by native chiefs. In 1873, at the suggestion of foreign residents, a house of nobles and a house of representatives were established, with Malietoa, Laupepa, and the chief of the royal house of Tupea as joint kings. Subsequently Malietoa became sole king. In 1887 he was deposed by the German Government upon the claim of unjust treatment of German subjects, who formed the bulk of the foreign population on the island, and was deported first to German New Guinea and then to the Cameroons, in Africa, and finally in 1888 to Hamburg, Tamasese, a native chief, being meantime proclaimed by the Germans as king, though against the protest of the British and American consuls at Samoa. Mataafa, a near relative of Malietoa, made war upon Tamasese and succeeded to the kingship.

In 1889 a conference between the representatives of the American, British, and German Governments was held at Berlin, at which a treaty was signed by the three powers guaranteeing the neutrality of the islands, in which the citizens of the three signatory powers would have equal rights of residence, trade, and personal protection. They agreed to recognize the independence of the Samoan Government and the free rights of the natives to elect their chief or king and choose a form of government according to their own laws and customs. A supreme court was established, consisting of one judge, who is styled the chief justice of Samoa, and who is at present W. L. Chambers, an American, formerly a resident of the State of Alabama. To this court are referred: First, all civil suits concerning real property situated in Samoa; second, all civil suits between natives and foreigners or between foreigners of different nationalities; third, all crimes committed by natives against foreigners or committed by such foreigners as are not subject to any consular jurisdiction.

The future alienation of lands was prohibited, with certain specified exemptions. The capital was located at Apia, the chief town of the group of islands, and a local administration provided for the municipal district

of Apia. A commission was appointed to investigate titles to lands alleged to have been purchased from the natives, and this in 1894 completed its labors, confirming about 75,000 acres of lands to Germans, 36,000 to British, and 21,000 to Americans, though much of this land has since changed hands. Malietoa, who had been deported, was restored as King in November, 1889, and continued as such until his death, which occurred August 22, 1898, when the consuls of the three powers, with the chief justice as president, took charge of the administration pending the election of a successor. It is out of the election and recognition of this successor to King Malietoa, deceased, that the recent disagreements between the representatives of the three Governments maintaining the joint protectorate over the islands have occurred.

PAGO PAGO HARBOR.

Especial interest attaches to these islands from the standpoint of the United States by reason of the fact that the harbor of Pago Pago, in the island of Tutuila, the southernmost of the group, was ceded to the United States for a naval and coaling station, first in 1872, and afterwards confirmed by a treaty signed at Washington January 17, 1878, and ratifications exchanged on February 13 of the same year, by which the United States was given the right to establish at that harbor a station for coaling, naval supplies, freedom of trade, commercial treatment as a favored nation, and extraterritorial consular jurisdiction. This harbor was occupied by the United States in 1898, presumably with the purpose of utilizing its advantages as a coaling and supply station. Tutuila, the island upon whose coast this harbor is located, has a population of 3,750 and an area of 54 square miles, while Upolou has an area of 340 square miles and Savaii 659 square miles.

INDUSTRIES AND COMMERCE.

The following statements from American consuls at Samoa, published in the annual volumes of the State Department Commercial Relations, present a view of conditions in the islands in 1897 and 1898, and of their commerce and revenue during recent years.

In a report to the State Department, dated Apia, Samoa, September 27, 1897, Consul-General Churchill says:

Since the passing of the sperm-whale fishery from these islands, what commerce exists depends almost entirely on the staple industry—the growth, purchase, and export of copra, the dried meat of the cocoanut.

The copra trade is in a state of great depression, the price of the article being now \$40 per ton on this beach. Ten years or more ago, when I last saw Apia, copra was then selling on the beach for from \$60 to \$75 per ton, there was almost no limit to the supply, the demand was equally unlimited, and the result was that the imports were correspondingly great as to quantities and values. The causes for this shrinkage in the price of copra are in a general way twofold, some pertaining to supply, some to demand.

That the supply of copra in this market has greatly fallen off is due to the wars and rumors of wars which have distracted and do now harass this Kingdom. This also has a twofold application. One is dependent on a custom of Samoan warfare, in which each party directs its destructive attention in a very marked degree to the plantations and crops of the opposite party. In no more than two minutes a man can destroy a cocoanut tree with a mere knife by cutting out its crown, and the tree thus treated will bear no more. It will take from five to seven years before another tree, planted to replace the one destroyed, can come into productive bearing. Innumerable trees have been thus destroyed in the loyal district of the Tuamasaga, of which Apia is the center, and in the disaffected districts of Atua and Aana, which adjoin the Tuamasaga on the east and west, respectively. And, furthermore, the Samoans will not plant trees so long as they have reason to fear, as at present, that war may at any time break out and render their labor nugatory. As reducing the supply of copra, this would give the article an upward tendency in price were it not for the operation of a cause working along the line of demand, which is far more valid in causing the existing depression in trade.

COCOANUT AND COTTON-SEED OILS.

The industrial value of the copra is found in that it is the raw material of cocoanut oil. The ingenuity of the manufacturers of the United States has discovered so many improved methods of oil extraction from abundant raw material closer to the world's markets that the copra, which must always come from the Tropics, must suffer, as it does, from the competition of skill with the mere forces of nature. Probably the increase in the production of cotton-seed oil in the United States has proved the most important single factor in breaking the high prices which formerly ruled here in the copra trade.

I have gone into this matter at some length, because it is impossible to appreciate trade conditions here without the knowledge that the bulk of all the exports consists of nothing but copra, and that the amount and value of imports depends wholly on the state of the copra market.

Adverting now to the schedule of chief points to be covered in this report, I have to note:

IMPORTS AND EXPORTS.

It is found impracticable to give a summary statement of the increase or decrease in exports and imports for the periods mentioned, owing to the fact that the collector of customs has but just issued his statement for 1895, and the returns for the current year have not been tabulated. I have, however, been advised by those competent to judge of the movement of trade that there is shown during this period, as for some time past, a gradual decline of German trade, accruing in about equal parts to the English (Australian) and American trade. This means a marked increase in American trade, for the volume of the American trade to this port as compared with that of the English colonies in Australia was last year as 23 to 100.

CURRENCY.

No changes are to be reported in the currency here in Samoa. The only coins current are of the mintage of Great Britain. All accounts are kept in terms of United States currency. To facilitate this peculiar use of the coinage of one country in the notation of another, there exists a system of reckoning values by means of the approximate equivalence of coins. The English sovereign (20 shillings=\$4.86) is taken as equivalent to the half eagle, the English florin (2 shillings=48 cents) to the half dollar, the shilling (21 cents) to the quarter dollar, the sixpence to the dime. The only case in which values are more rigidly computed is in foreign exchange, and in that case the rate is almost practically uniform at \$4.86 to the pound sterling. In the absence of banks, it has been found a peculiarly difficult task to arrive at an estimate of the amount of currency in circulation. I have made computations on several grounds of reckoning, and the results accord on the sum of \$30,000 to \$35,000.

PRICES AND WAGES.

Any changes in the price of commodities are so slight as not to be appreciable.

Rates of wages.—Laborers, \$1 a day; \$10 a month with food; domestic servants, \$3 to \$10 a month with food and lodging; mechanics, \$3 to \$5 a day; clerks, \$50 a month and board; bookkeepers, \$100 a month and board.

TRANSPORTATION FACILITIES.

There are no lines of railway, no canals, no navigable rivers, no wagon routes, and no caravan trails. Communication within the group is held by small sailing vessels and by one small steamer, the *Vaosa*, of 90 tons, built this year in this Kingdom, and documented to carry the American flag. Communication with the larger world is maintained by the line of vessels engaged in the mail service between San Francisco and Sydney, New South Wales, and the interisland vessels of the Union Steamship Company of New Zealand.

The mail service employs three steamers—two the property of the Oceanic Steamship Company, of San Francisco (John D. Spreckels & Bro.), the American ships *Alameda* and *Mariposa*, and the British steamer *Monowai*, owned by the Union Steamship Company, of New Zealand. The service consists of 13 trips a year, one vessel each way calling at Apia every twenty-eight days for a stop of from two to five hours, according to the amount of freight to be handled and the state of the weather. The voyage from Apia to San Francisco is fifteen days.

The Union Steamship Company runs two vessels a month between Sydney and Auckland by way of Levuka, Fiji, and Apia. These vessels are the *Tarini* and the *Ovalau*, small and slow vessels, but quite up to the requirements of the island trade. Freight rates to and from the Australian colonies by these vessels are in marked contrast with the high rates charged by the mail line on freight from San Francisco. I cite the instance of flour: The freight from San Francisco is \$12 a ton; from Sydney but \$7.50. It is to be said that the agents of the mail line have made efforts to secure cargoes for the trip toward the American market by offering very low rates on copra shipments.

CREDITS.

Credits are expected as follows: Cash to one hundred and twenty days on purchases made in Australia; cash to ninety days on purchases made in the United States.

DECLARED VALUE OF EXPORTS FROM THE CONSULAR DISTRICT OF APIA, SAMOA, TO THE UNITED STATES DURING THE YEAR ENDED JUNE 30, 1892.

DUTIES, TAXES, AND LICENSES.

[Extract from Berlin act, proclaimed May 21, 1890.]

ARTICLE VI.

SEC. 1. The port of Apia shall be the port of entry for all dutiable goods arriving in the Samoan Islands; and all foreign goods, wares, and merchandise landed on the islands shall be there entered for examination; but coal and naval stores, which either government has, by treaty, reserved the right to land at any harbor stipulated for that purpose, are not dutiable when imported as authorized by such treaty, and may be there landed as stipulated without such entry or examination.

SEC. 2. To enable the Samoan Government to obtain the necessary revenue for the maintenance of government and good order in the islands, the following duties, taxes, and charges may be levied and collected, without prejudice to the right of the native government to levy and collect other taxes in its discretion upon the natives of the islands and their property, and with the consent of the consuls of the signatory powers, upon all property outside the municipal district, provided such tax shall bear uniformly upon the same class of property, whether owned by natives or foreigners.

A.—Import duties.

1. On ale and porter and beer, per dozen quarts	\$0.50
2. On spirits, per gallon	2.50
3. On wine, except sparkling, per gallon	1.00
4. On sparkling wines, per gallon	1.50
5. On tobacco, per pound50
6. On cigars, per pound	1.00
7. On sporting arms, each	4.00
8. On gunpowder, per pound25
9. Statistical duty on all merchandise and goods imported, except as aforesaid, ad valorem	2 per cent

B.—Export duties.

On copra, ad valorem	2½ per cent
On cotton, ad valorem	1½ per cent
On coffee, ad valorem	2 per cent

C.—Taxes to be annually levied.

1. Capitation tax on Samoans and other Pacific Islanders not included under No. 2, per head	\$1.00
2. Capitation tax on colored plantation laborers, other than Samoans, per head	2.00
3. On boats, trading and others (excluding native canoes and native boats carrying only the owner's property), each	4.00
4. On firearms, each	2.00
5. On dwelling houses (not including the dwelling houses of Samoan natives) and on land and houses used for commercial purposes, ad valorem	1 per cent
6. Special taxes on traders, as follows:	
Class I:	
On stores of which the monthly sales are \$2,000 or more, each store	\$100.00
Class II:	
Below \$2,000 and not less than \$1,000	48.00
Class III:	
Below \$1,000 and not less than \$500	36.00
Class IV:	
Below \$500 and not less than \$250	24.00
Class V:	
Below \$250	12.00

D.—Occasional taxes.

1. On trading vessels exceeding 100 tons burden calling at Apia, at each call	10.00
2. Upon deeds of real estate, to be paid before registration thereof can be made, and without payment of which, title shall not be held valid, upon the value of the consideration paid	½ per cent
3. Upon other written transfers of property, upon the selling price	1 per cent
Evidence of the payment of the last two taxes may be shown by lawful stamps affixed to the title paper, or otherwise by the written receipt of the proper tax collector.	
4. Unlicensed butchers in Apia shall pay upon their sales	1 per cent

E.—*License taxes.*

No person shall engage as proprietor or manager in any of the following professions or occupations except after having obtained a license therefor, and for such license the following tax shall be paid in advance:

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

VALUE OF CARRYING TRADE FOR THE MONTH OF MARCH, 1898 AND 1899.

Distribution, by Flag of Carrying Vessel, of the Value of Imports and Exports of Merchandise.

MISCELLANEOUS TABLES.

[SEE CONTENTS.]

PRODUCTION AND CONSUMPTION OF WOOL.

[From Helmuth Schwartz & Co.'s Annual Wool Circular, London.]

The total quantity of raw wool available for consumption in 1898, exclusive of old stocks, was 2,261 million pounds against 2,304 million pounds in the preceding year. The decrease in the Australian production was not quite so heavy as at first expected, while the imports of Cape wool were swelled by early arrivals in December. The imports of River Plate bales for the calendar year (Europe and North America together) were somewhat less than in the previous year, but the average weight of the bales was again heavier, thus indicating an increase in the total quantity. Sundry sorts show a reduction.

Calculated in clean wool the falling off in the total supply is comparatively greater, viz, 30 million pounds, or about $2\frac{1}{2}$ per cent.

The quantity of clean wool left for consumption was on the average of periods as follows, per head of population :

Period.	Pounds and decimals.	Increase on previous period.
1861-1870.....	2.26
1871-1880.....	2.43	+ $7\frac{1}{2}$ per cent.
1881-1890.....	2.57	+ 6 per cent.
1891-1898.....	2.80	+ 9 per cent.

The supplies in 1895 were the largest on record, and heavy stocks were carried over to the following years. Averaging the last four years, and comparing them with the two preceding periods of four years, the result is as follows:

PRODUCTION OF CLEAN WOOL.

Period.	Total million pounds.	Per head of population, pounds and decimals.	Average value per bale of Colonial wool, £ and decimal.
1887-1890.....	1,053	2.61	14.4
1891-1894.....	1,169	2.78	12.4
1895-1898.....	1,238	2.83	11.7

The increase in the quantities since 1887-1890 amounts to $17\frac{1}{2}$ per cent, or allowing for the growth of population, to $8\frac{1}{2}$ per cent, while the value of Colonial wool is 19 per cent less.

The quantity of raw wool left for consumption in Europe last year was larger than ever before, owing to the insignificance of the American demand, but if the last two years are taken together the total is less than in the two preceding years, viz, 3,556 million pounds in 1897-98 against 3,619 million pounds in 1895-96. The quantity retained by North America is the smallest since 1881; the net imports into the United States, which amounted to 354 million pounds in 1897, were only 95 million pounds in 1898, and of these only 62 million pounds went into consumption, the stock in bond being increased from 25 to 58 million pounds. The actual consumption in the United States was probably smaller than usual, and the general stock appears to be still very large.

This year's supply of wool will not show any material increase so far as can be judged at present, and if the United States will only take a moderate quantity it will go far to lighten the supplies for the European industry. With regard to the character of the supplies we can only repeat what we said in previous reports, that the production of merino wool will be less than at any time since 1888.

PRODUCTION AND CONSUMPTION OF WOOL (IN MILLIONS OF POUNDS) IN EUROPE AND NORTH AMERICA.

[Figures for Europe exclude the Balkan Peninsula.]

**NUMBER OF PASSENGERS DEPARTED FROM SEAPORTS OF THE UNITED STATES FOR FOREIGN COUNTRIES,
OTHER THAN BRITISH NORTH AMERICA, DURING THE YEAR ENDING JUNE 30, 1898.**

[In the absence of law requiring masters of vessels departing from the United States for foreign countries to deliver to collectors of customs returns of the passengers embarking on such vessels, reliance is had upon the courtesy of the agents of steamship and packet lines for information on the outward passenger movement. The following statistics relate only to the departure from the seaports indicated in the table, and comprise only the data secured in the manner above indicated, but it is probable that the departures given embrace nearly the entire passenger movement from the United States to foreign countries from our seaports.]

**TRAFFIC THROUGH THE MANCHESTER SHIP CANAL, ENGLAND, FROM 1894 (WHEN OPENED TO TRAFFIC) TO
1898.**

[Furnished by the Secretary of the Manchester Chamber of Commerce.]

YEAR.	In seagoing craft.	In barges.	Total traffic.	Gross reve- nue.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	
1894	686,158	239,501	925,659	£87,470
1895	1,087,443	271,432	1,358,875	136,759
1896	1,509,658	316,579	1,826,237	179,834
1897	1,700,479	365,336	2,065,815	204,414
1898	2,218,005	377,580	2,595,585	235,278

NOTE.—These statistics do not include the tonnage carried upon nor the revenues derived from the old Bridgewater Barge Canal, opened rather more than a century ago, and now the property of the Manchester Ship Canal Company.

COMMERCE BETWEEN THE UNITED KINGDOM AND THE UNITED STATES.

PRINCIPAL ARTICLES IMPORTED INTO AND EXPORTED FROM THE UNITED KINGDOM IN ITS TRADE WITH THE UNITED STATES DURING THE MONTH AND THREE MONTHS ENDING MARCH, 1897, 1898, AND 1899.

IMPORTS FROM THE UNITED STATES.

COMMERCIAL CHINA IN 1899.

[For value of standards of currency, weight, and measure see page 2256.]

The rapid growth of the foreign trade of China and of its trade with the United States, coupled with other recent developments in that part of the world, seems to warrant the presentation of some facts bearing upon present commercial conditions in that vast Empire.

Comprising as it does one-twelfth of the land area and nearly one-fourth the population of the globe, it is not surprising that events which indicate a marked change in its business condition or the methods of its people should attract wide attention. With an area of 4,000,000 square miles and a population of 400,000,000 people, its written history covering thousands of years shows that its doors have been firmly closed against foreign trade until within the memory of the present generation, while during the short time in which foreigners have been admitted to its commerce no period has been so marked with important commercial developments as that of the past three years. With hundreds of miles of railways now in operation and thousands of miles projected; with telegraphs connecting its capital with every province and even its far away dependencies and also with the outside world; with steam navigation and foreign steam vessels penetrating to the very head of its many navigable waterways; with new treaty ports opening upon the coast and far inland, and with foreigners permitted to travel for business or pleasure to the remotest corners of the Empire and carry with them their merchandise and the machinery with which it is manufactured, the changes in conditions are such as to attract unusual attention.

BEGINNING OF AMERICAN COMMERCE WITH CHINA.

American commerce with China began in 1784, the first vessel leaving New York February 22 (Washington's birthday) of that year, and returning May 11, 1785, thus occupying nearly fifteen months in the voyage. The success of the venture was such as to warrant its repetition, and from that time forward trade between the United States and China was continued without material interruption until it came to be greater in importance and value than that of any other nation trading with China, with the single exception of Great Britain. Even now, with all the rapid developments of modern commerce and the pressure which the people of all commercial nations are bringing in that direction, our sales to China are rapidly growing, having quadrupled during the last decade.

EARLY METHODS OF FOREIGN COMMERCE WITH CHINA.

All trade with China prior to 1842 was carried on through the "hong merchants" at the few ports where travelers were permitted to send their vessels on land their goods. The Portuguese who sent the first trading vessel to the coast of China in 1516 met with varying success in their attempts to establish business relations, but finally succeeded in bringing about business relations and in establishing a trading post called a "factory" at Ningpo in 1522, and in 1537 another on the island of Macao, off the southern coast, near Canton, which island they still hold, but were only permitted to sell through the Chinese merchants having "hongs" or warehouses at Canton. This was also the case with the Spanish, who conquered the Philippines in 1543 and began a trade with China, commerce between Manila and China having been established in the same manner and continued from that time to the present. The Dutch, whose commerce with the East began soon after they had thrown off the Spanish yoke, established themselves on the Pescadore Islands, off the eastern coast, in 1624, but owing to their wars with China their commerce with the mainland was small and necessarily carried on through the "hong merchants" at Canton. The British, whose first ship landed off Macao in 1635, were denied trading privileges until they had commanded respect by the use of their guns, when they were given the same trading privileges through the "hong merchants" at Canton that were granted to other nations, and their trade through the East India Company grew rapidly after 1664, but with access only through the "hong merchants" or by the smuggling of goods, especially opium, which was brought from their possessions in India and soon became extremely popular with the Chinese. Numerous embassies were sent to the capital by the various nations with the hope of establishing closer commercial relations, but as the dignitaries sent were invariably required to perform the "kotow," which consisted in kneeling three times and striking the forehead nine times upon the ground before the Emperor, progress in

establishing closer relations was not rapid. American trade, which, as already indicated, began in 1784, was also carried on through the "hong merchants" until the events of 1842 and 1844, within the memory of many yet living, changed conditions and began the development which has now resulted in almost unlimited trade and foreign intercourse with all parts of that great Empire.

OPENING OF TREATY PORTS AND DIRECT TRADE WITH THE WORLD.

The event which began the new order of things was the "opium war" between Great Britain and China, growing out of the seizure of opium brought in British vessels, which war resulted in the signing of a treaty of peace between China and Great Britain in 1842, in which it was agreed that British subjects should be permitted to reside at the ports of Canton, Shanghai, Amoy, Foochow, and Ningpo, all located on the eastern coast, and to trade with whatever persons they pleased; and British consuls were appointed who became answerable to the Chinese Government (in lieu of the "hong merchants") for dues and charges payable by British subjects. In 1844 Caleb Cushing, of the United States, arrived in China with a letter from President Tyler asking for a treaty of friendship and commerce, and this treaty was soon negotiated, signed and ratified, thus giving to citizens of the United States the same privileges of residence and trade at the five treaty ports that had been granted to the British. A few months later a similar treaty with France was signed, and the ports thus opened to commerce became known as "treaty ports," which name has been applied to others similarly opened through other and later treaties until the number thus opened to foreign trade and residence now reaches nearly 30, many of them far in the interior.

Meantime the privileges of foreigners have been slowly but steadily increased. It was not until 1858 that ministers of foreign Governments were permitted to reside at Peking, the capital, and not until 1873 that they were permitted to visit the Emperor in person, while it remained for the year 1898 to witness the first reception of the wives of foreign ministers by the Empress.

(A list of the treaty ports, with dates of opening, population, number of foreign residents, and a general description of their conditions and trade methods, will be found on pages 2190 and 2265.)

RECENT COMMERCIAL DEVELOPMENTS.

The more rapid development of the privileges of foreigners in China and of the introduction of modern commercial methods dates from the treaty of Shimonoseki, made between China and Japan in 1895, at the close of the war between those nations, and followed by a commercial treaty in 1896. The important features of these treaties were that they opened the waters of the principal rivers and canals to citizens of other nations, giving foreigners the right to purchase goods or produce in the interior of China, to rent warehouses without the payment of special taxes or exactions, and to engage freely in all kinds of manufacturing industries in the treaty ports, also to import all kinds of machinery, paying only the stipulated import duties thereon, and upon products manufactured by them in China paying only such inland transit dues as are leviable on imported merchandise (the latter provision having been somewhat modified, however, by the commercial treaty). While the China-Japan treaty specifically conferred these privileges only on Japanese subjects, they at once became applicable to the subjects of other nations having full treaty relations with China under the "most favored nation" principle. The prompt result of this was a movement from all parts of the business world in the direction of China, and the establishment of business and manufacturing industries, not only in the old treaty ports but in the new ones which were opened by the Japanese treaty, and by subsequent action of the Chinese Government. This was followed by other evidences of a disposition to adopt modern methods. The railroad from Peking to Tientsin was quickly completed by the Chinese Government, and agreements made looking to the construction by foreign capital of other lines thousands of miles in length; telegraphs were extended; electric roads, electric lights and telephones introduced in the principal cities; mining and manufacturing concessions freely granted; the West River, which penetrates southern China from Canton westward, was opened to commerce, and, finally, small steamers under foreign control were given permission to penetrate to the interior limits of navigation on all the rivers of the provinces containing treaty ports. The effect of this is already seen in the establishment of factories and business houses, the construction of railroads, the extension and multiplication of steam navigation lines, and the opening of mines in the great sections where the iron and coal deposits are said to be the greatest in the known world.

(For details of mining concessions, see page 2208.)

PORTS LEASED TO FOREIGN NATIONS.

Among the recent events that have attracted especial attention to China is the lease to foreign nations of important strategic or commercial ports on the coast of the Empire. While the Portuguese have controlled the island of Macao, near Canton, since 1537, and the English became owners of the island of Hongkong, in the same

vicinity, by the treaty of 1842, no other nation had possessions on or near the coast of China until within a comparatively recent date. One result of the war between China and Japan was that Japan obtained the island of Formosa, lying 90 miles off the coast of central China. By this treaty Japan was also to have certain territory on the peninsula of Liaotung, which commands from the north the entrance to the Gulf of Pechili, the gateway to the capital of China; but on the urgent protest of Russia, France, and Germany this was abandoned, and the mainland of China up to that time thus remained intact.

On November 4, 1897, however, the German Government seized the port of Kiaochau, on the northeastern coast of China, asserting as the cause of its action the desire to obtain satisfaction for the murder of German missionaries by Chinese on November 1 of that year. This port was held by a German war ship until the announcement of a treaty with China by which the port of Kiaochau and adjacent territory were leased to Germany for a term of ninety-nine years, the German Government being given the right to land troops, construct fortifications, and establish a coaling and naval station, while German subjects were to have the right to construct railways, open mines, and transact business in the rich mineral and agricultural province of Shantung, in which Kiaochau is located, Chinese vessels, however, to have the same privileges in the port of Kiaochau that the German Government might decide to give to other nations.

One month later, on December 22, 1897, the Russian Government obtained permission for its naval squadron to winter at Port Arthur, on the Liaotung Peninsula, which it had, with Germany and France, in 1895, required Japan to abandon. On March 27, 1898, an agreement was signed by the Chinese Government by which Port Arthur and the adjacent port of Talienwan were leased for a term of twenty-five years to the Russian Government, the lease to be subsequently extended by mutual agreement. This lease included 800 square miles of territory and all harbors between Port Arthur and Talienwan, the harbor of Port Arthur and a part of Talienwan to be for the sole use of Russian and Chinese men-of-war, Russia to have the privilege of extending its trans-Siberian railroad line through Manchuria to Port Arthur and Talienwan and to protect the same, during and after its construction, by Russian troops.

This action, by which the northern side of the entrance to the Gulf of Pechili, leading to the capital of China, was placed under control of Russia, being unsatisfactory to the English Government, a lease of the harbor of Weihaiwei, on the opposite or southern side of the entrance to the Gulf of Pechili, was made to Great Britain on April 2 of the same year, 1898, the lease to be upon the same terms as that by which Port Arthur was granted to Russia and to continue as long as Russia should occupy the peninsula of Liaotung. Weihaiwei was occupied by Great Britain May 24, 1898, permission being given also to occupy the islands of the Bay of Liukung and a strip of land 10 miles broad along its entire length, with the privilege of erecting fortifications and occupying the adjacent coast for military and naval purposes, the walled city of Weihaiwei, lying within these limits, however, to remain under control of the Chinese Government. On June 9, 1898, a lease was also made by England of an area of about 200 square miles on the mainland opposite its island of Hongkong, and surrounding the Chinese city of Kowloon, which city, however, was to remain under Chinese jurisdiction, the lease to continue for a term of ninety-nine years.

The concessions of territory to Germany, Russia, and England led to a demand for similar privileges by the French Government, and on April 13, 1898, the Chinese Government leased to France the harbor of Kwangchauwan, in the Leichau peninsula, on the southern coast, near to the French possession of Tonkin, and protecting in some degree the Gulf of Tonkin. This lease was also accompanied by the privilege of connecting the French territory of Tonkin with the Chinese province of Yunnan and the city of Yunnanfu, the harbor of Kwangchauwan to be used as a naval station. The lease was for ninety-nine years and similar in terms to that made with the German Government for Kiaochau, carrying with it exclusive mining privileges in the area to be traversed by the proposed railroads. In view of this agreement, Great Britain therefore assumes that she has now the right to extend her Burmese railroads into the province of Yunnan, in southwest China, through an agreement made with China, January 15, 1896, by which all privileges to France or Great Britain in the provinces of Yunnan and Szechuan should be given to both countries.

These concessions to Germany, Russia, Great Britain, and France, which followed each other so rapidly in 1897 and 1898, were followed in March, 1899, by a demand by the Italian Government for similar privileges at the port of San Mun, and in April, 1899, somewhat similar demands are reported to have been made by Japan regarding certain territory on the coast opposite her island of Formosa, both of which demands are now pending adjustment. (For location of the ports so leased, see accompanying map.)

In all of the above cases the countries obtaining possession of these ports have announced that at least a portion of each port will be freely open to the commerce of all nations (Port Arthur excepted), and the German Government has already arranged for the location of Chinese custom-houses at the docks which it is building at Kiaochau, in order to permit goods passing to or from the interior of China to be examined and pay duty at that point, and a reexamination at the limits of the German territory thus obviated. An official report to the German

[For value of standards of currency, weight, and measure see page 2256.]

Reichstag, in 1898, announces that no duties will be levied in the port of Kiaochau upon goods intended for consumption in German territory, excepting the excise duty on opium.

Thus during the eighteen months ending with April, 1899, four great European nations—England, Germany, France, and Russia—have obtained long leases of ports and naval stations on the coast of China, in addition to the three islands just off its coast, already controlled by England, Portugal, and Japan, and Italy and Japan are now demanding similar concessions.

FOREIGN COMMERCE OF CHINA.

The foreign commerce of China has increased rapidly since the treaty ports were opened and especially in the last quarter of a century. The earliest attainable reports of the details of importations and exportations are for the year 1873, when the exportations were valued at 69,451,000 haikwan taels. In 1897 they had reached 163,501,000 haikwan taels. The importations in 1873 were valued at 76,637,000 haikwan taels, and in 1897, 202,829,000 haikwan taels. It must be borne in mind, however, that the haikwan tael, in which all imports and exports are stated, is merely a given weight of silver ($1\frac{1}{3}$ ounces avoirdupois), and therefore varies in value with the fluctuations in the price of silver, and that the actual increase in commerce during that time may not be as great as the increase in figures would indicate. The further fact, however, that many articles, both of import and export, have decreased materially in value during that period renders any attempt to accurately determine the actual growth difficult, if not impossible. A reduction of the haikwan tael to dollars, determining the same by the weight of silver indicated by the tael, puts the exportations of 1873 at \$106,956,000 in value and in 1897 at \$127,531,000, and the imports in 1873 at \$102,621,000 and in 1897 at \$158,207,000. This calculation, however, would be equally misleading, because of the very great reduction meantime in the value of many articles, both of export and import. An attempt to determine accurately the growth of the commerce of China during that period could only be made by a detailed examination of the imports and exports of each article by quantities.

SPHERES OF INFLUENCE.

Much has been said of late regarding the so-called "spheres of influence." While this term can scarcely be considered applicable in the sense in which it is used in other parts of the world, especially Africa and parts of India, a recent official utterance by the Chinese Government indicates that certain privileges in certain provinces are no longer open to all nations. An official announcement issued by the "Bureau of Control for Mines and Railways" in December, 1898, says that "the mines and railways of Manchuria, Shantung, and Lungchow are affected by international relations, and therefore will not be allowed to form precedents either for Chinese or foreigners" in the matter of railway and mining concessions provided for in the regulations quoted. As the Russian ports of Port Arthur and Talienwan are located in Manchuria, the German port of Kiao-chau in the Province of Shantung, and the French possessions of Tonking and Kwang-chau-wan are in the immediate vicinity of Lungchow, this official statement that their mines and railways are "affected by international relations" seems at least significant. In addition to this, unofficial statements have been made that an agreement exists between China and Japan to the effect that the Province of Fuh-kien, directly opposite the island of Formosa, now controlled by Japan, shall not be alienated to any other government, while an agreement with the British Government has been made by the Chinese Government during the past year that the valley of the Yangtze will not be "alienated" or its trade allowed to pass under the control of any individual nation. The most strongly marked case of the existence of a sphere of influence, if such exists within China, is probably that of the Province of Manchuria, through which the Russian Government has been given authority to construct a railway and to guard the same with its troops, the consequence being that large numbers of Russian troops are now within that section of Chinese territory, the total number being unofficially estimated at from 20,000 to 40,000.

TREATY PORTS, AND THEIR RELATION TO BUSINESS.

The "treaty ports" are the doors through which foreign commerce enters and at which citizens of foreign nations may personally engage in trade with the people of that country. Through these doors enters and must continue to enter the merchandise for which other nations find a market in China, and upon the facilities which they offer the residents of foreign nations are dependent for their intercourse, business, and otherwise with the 400,000,000 people of that great Empire. A study somewhat in detail of these entrance ways to the commerce and people of that great nation is therefore appropriate.

The "treaty ports" are not, as might naturally be supposed, located exclusively on the coast. Indeed more than one-half of the cities which are now open to foreign commerce under treaty regulation are located in the interior, some of them thousands of miles from the coast. Only 13 of the 28 cities classed as treaty ports are upon or immediately adjacent to the coast, and while most of the remainder are located upon navigable streams in the

interior, some are not even accessible by waterways or land-transportation systems other than the mere carriages or carts, wheelbarrows, or pack animals and men. Chungking, located in the populous Province of Szechuan, at the head of navigation on the Yangtze-kiang, is 2,000 miles from the coast, while Yatung, recently opened in the dependency of Tibet and reached only by pack trains and loads carried by men, is nearly 3,000 miles inland, measuring from China's greatest port of entry, Shanghai. While all of the cities opened to trade in the early history of this development of foreign commercial relations were upon the coast, the privilege has gradually been extended toward the interior, until now the Yangtze valley is thickly dotted with cities open to trade, and cities along the valley of other navigable streams are also thus privileged. With an apparent disposition to open cities to foreign trade wherever conveniences for transportation are available, it is reasonable to expect that the multiplication of transportation conveniences through the introduction of railways and steam navigation on the smaller streams will be followed by a multiplication of treaty ports and trade privileges, and perhaps finally a general opening of all trade centers without limitation to privileges of this character. With the right of navigation and mining and manufacturing freely opened already to citizens of foreign countries, it is not improbable that privileges of trade and residence will be more rapidly extended to them in the future than has been the case in the past, and thus the experience and skill and customs and inventions and business manufacturing methods of other nations be rapidly distributed among the people of this great Empire.

RAILWAYS IN CHINA.

The 400,000,000 people of China are now served by 350 miles of railway, or less than 1 mile for each million people. More than ten times this length of railway, however, is now projected, and not only projected in the ordinary sense of the term, but in many cases being actively pushed forward and with prospect of a comparatively early completion. The roads thus far constructed belong to the Chinese Government, and were constructed under its control and direction and at its expense. They connect Peking, the capital, with Tientsin, the most important treaty port of northern China, and thence to Shan-hai-kwan, lying, as does Tientsin, on the Gulf of Pechili; while another part of the line runs southwestwardly from Peking to Paoting, the capital of the Province of Chili, in which Peking is located.

China's first railroad was opened in 1876 between Shanghai, the New York of China, and Wusung, 14 miles distant, lying more directly upon the seacoast on an estuary of the Yangtse, with which Shanghai is connected by the Wusung River. Its existence, however, was very brief, for native prejudice and superstition were so strong that local authorities bought up the line, which had been constructed by British enterprise, tore up the rails, and abandoned it. Five years later, however, Mr. G. E. Kindler, an English engineer, who had been placed in charge of some coal mines near Tientsin, found in existence a tramway over which coal was transported on cars pushed by Chinese workmen, and gradually extending it north and south, finally placed a steam engine upon it for use in transporting coal, and Chinese prejudice, after finding that the use of the engines did not bring the disaster anticipated, gave way and the roadway developed into one for general traffic, and extended little by little until it reached Tientsin at the south and the treaty port of Shan-hai-kwan on the north, and proving successful and popular, was further extended from Tientsin to within a short distance of Peking, with which it was connected by an electric road, the entire system proving so popular that it soon became necessary to enlarge its facilities, its patronage being gathered from native as well as foreign interests and individuals. From Peking it has been extended, as already indicated, southwestwardly to Paoting, and thence is expected to penetrate the important coal and iron regions lying within easy reach.

This comparatively short system of 350 miles, connecting the capital of the Empire with two of the important treaty ports on the coast and with Paoting, the capital of the province in the interior, is the germ from which has sprung a prospective railway system of more than ten times its length.

In this prospective railway enterprise all the great nations, or at least representatives of all the great nations, are interested. Starting from Manchuria, the extreme northeasterly dependency of China, is a projected Russian line to connect with the great Russian trans-Siberian railway, now nearing completion, and which will bring its great traffic to the ice-free ports of Port Arthur and Talienwan on the Gulf of Pechili, which lies directly east of Peking and Tientsin, the most important treaty port of north China. To this proposed Russian line the Chinese Government has already given assent and work upon it is in progress, the men and property utilized in its construction being guarded by Russian troops, thus bringing into northern China a Russian influence and military force which have led the map makers and students of the great affairs of nations to already shade, whether justly or unjustly, that portion of the map of China as a "Russian sphere of influence." This Russian line passes near to the important treaty port of Newchwang, where American and British commerce is already well established, and in order to minimize the danger to this commerce by the proximity of the Russian line and Russian interests, British capital has arranged for the construction of a road from Shan-hai-kwan, already touched by a completed line from Peking to Tientsin, to Newchwang, thus giving a ready railway communication with the capital, the

great port of Tientsin, and thence toward the Yangtze valley, where the British have arranged with China that there shall at least be no concessions in favor of any other government, and which valley is thus by some, though with doubtful propriety, termed a "British sphere of influence."

The important territory lying between Peking and Tientsin at the north and the great Yangtze Valley in central China is already a checkerboard of proposed railway lines. One of these runs from Tientsin southeastwardly to Shanghai, at a distance of from 100 to 350 miles from the coast, following the general course of the Grand Canal, but at considerable distance from it at places, and having a length of probably 700 miles. A small portion of this from Shanghai northward is a British concession; but as a part of the proposed line extends through the province of Shantung, in which the Germans claim railway and mining rights under their Kiaochau concession, British and German capital have combined for the construction of the large proportion of the road. At two points midway it is tapped by purely German lines, which run eastwardly to the German possession and port of Kiaochau, penetrating important coal and iron regions, the population of the province through which they extend, Shantung, being more than 36,000,000.

Lying west of the British-German line which connects Shanghai with Tientsin and Peking, and from 200 to 400 miles distant, is another important line, which is to connect Peking with Hankow, the most important interior city of China. Hankow is on the Yangtze River, at the head of what may be termed deep-water navigation, being reached by large seaworthy steamers that bring it into direct water communication with Shanghai and all the other great ports along the coast. The importance of a line which connects this great business center of nearly a million people with the capital of the Empire, and at the same time passes through an important agricultural and mining section having a population of 100,000,000, can scarcely be overrated. This proposed line, about 650 miles long, is in the hands of a Belgian syndicate, though expression has been given to the belief that Russian influence and Russian funds cooperate in its proposed construction and prospective control, and some color is given to this belief by the fact that a shorter line under admittedly Russian control is to connect it at the north with the important coal and iron regions of Shansi province.

Still west of this important line is a series of lines of several hundred miles in length penetrating the great iron and coal districts of northwestern China, which are designated as the greatest coal deposits of the world, the proposed line being under a combination of British and Italian interests, and the concession granted being not only the privilege of constructing the proposed roads, but also the mining of coal and iron and other business opportunities. Some of these lines extend southwestwardly toward the Yangtze Valley, in whose development British interests are especially concerned, but the connections are with the proposed Hankau-Peking line, which, as already indicated, is in the hands of a Belgian syndicate.

In the great territory south of the Yangtze American and British lines are the only ones to which concessions have yet been granted, except in the extreme south adjacent to the French territory of Tonkin, where several comparatively short concessions have been granted to lines under French control. Running southward from Shanghai, at a short distance from the coast, is a British line to connect the treaty ports of Wenchow, Ningpo, and Hangchow with Shanghai, and which is quite likely to be extended to the treaty ports farther down the coast and finally to Hongkong, or rather the recently acquired British territory adjacent to Hongkong, where it would connect with a short British line now under construction and with the great southern commercial center of Canton. The length of this line now projected, and for which concessions have been made, is about 200 miles. From Shanghai westwardly there is also a short British line proposed to extend to Soochow and Nankin.

American railway concessions in China are up to the present time confined to a single but very important line which is to connect Canton, the great commercial center of southern China, with Hankau, the great interior city and commercial center already described. This line, which is about 600 miles in length, passes through a rich and important agricultural section, having a population equal to that of the United States, and at its center taps an important iron and coal area. The direction of the proposed line is almost due north and south, and while it practically touches the seaboard at its southern terminus, where it reaches the Yangtze, at the north is several hundred miles interior, thus bringing into direction with the great port of Canton the products of the Upper Yangtze Valley, which section is quite similar to that of the Upper Mississippi in our own country. At Hankau the proposed American line will connect with the proposed Belgian line, which will bring it into direct communication with Peking, the capital of the Empire, thus placing in direct communication the capital of the Empire at the north, the great commercial center, Hankow, in the interior, and the great producing center in the western interior, with the great seaport at the south, Canton. This concession was granted to American capitalists in April, 1893, under an agreement executed after due imperial sanction by the present Chinese minister at Washington, and a corps of engineers and officials is now in China, under the charge of Mr. W. B. Parsons, of New York, engaged in an elaborate survey of the route, which it is expected will be completed within a few weeks.

The Railway Age recently gave the names of the Americans most prominently connected with this enterprises as Hugh J. Grant, Samuel Thomas, and Thurlow Weed Barnes, of New York; George J. Bippers, of Indiana, and the Carnegie Steel Company of Pennsylvania. The sum to be advanced by this company is named as

\$20,000,000 for the Canton-Hankow Road, and \$25,000,000 for the Hankow-Peking Road, should that contract be also given them. American enterprise in railway building seems to be well recognized by the Chinese, who, in July, 1898, selected Capt. Watson W. Rider, of the United States, as chief engineer of the Chinese Imperial Railway system, and during the year ordered several locomotives from American workshops and a quantity of rails through an American contractor.

In the extreme south of China French interests are proposing sundry railway lines to connect their ports and navigable rivers of Tonkin with the cities and provinces of southern China. These proposed lines not only connect the French territory of Tonkin with the treaty ports of Mengtsz, Woochow, and Pakhoi, but also the important points of Yunnan, Nanning, and the navigable waters of the West River, which form a connection with the port of Canton and the railway lines that are to center there, and thus give connection with the great railway system of China.

Lying several hundred miles west of the proposed American line is a British line to connect the province of Szechuan in the west of China with Canton and Hongkong. Szechuan is the largest, the most populous, and perhaps the most productive of the provinces of China, being an elevated table-land lying at the head of navigation on the Yangtze, and whose varied productions and enterprising population give it a character quite similar to that of the region of the Upper Mississippi in the United States. This proposed British line connects Chengtoo, the capital of Szechuan, with Wuchow on the West River, which has recently been opened to commerce, and from which point traffic will reach Canton either by the West River or by an already projected line from Wuchow to Canton. This proposed British line connecting Szechuan with the lines which reach Canton is about 600 miles in length.

Another extremely important British line proposed differs entirely from any of those already described, in the fact that it is an effort to connect China and her railway systems with the railway systems of British India. This bold project is now to extend the existing railway line from Mandalay in Burmah to the Chinese border at Kunlong Ferry. From that point it is proposed to build a British line northeastwardly into the Chinese province of Yunnan and to the city of Yunnan itself, and thence farther northeastwardly to Chunking, in the great province of Szechuan, to the head of navigation on the Yangtze. This proposed line would cross the British line connecting Szechuan with Canton, thus not only putting the railway system of Burmah into direct communication with Canton, but also bringing it into communication with the head of navigation in the great Yangtze Valley, where Great Britain has already obtained an agreement that no exclusive territorial concessions to foreign governments shall be made, and whose commerce is looked upon as the most important of that of all China. While this project of tapping southern, western, and central China by a connection with the Burmah and Indian railway systems necessarily encounters many serious obstacles, because of the character of the territory through which the connecting lines must pass, it is one of great importance and almost startling in its conception and possibilities, since, if successful, it would bring the existing railway system of India, having a total length of 25,000 miles, into touch with the proposed railway system of China and connecting through China with the great Russian trans-Siberian road, thus giving a direct and connecting railway line from St. Petersburg eastwardly through Russia and Siberia, southwardly through China, and again westwardly into and extending through British India.

The cost of these proposed railway lines in China will be, if carried out, an enormous sum. The lines constructed up to the present time have been built under the control and at the expense of the Chinese Government. The recent concessions propose to permit the construction of lines by capital and organizations composed of residents of other countries. The funds for this purpose are in most cases to be secured by mortgage upon the railways thus created, the disbursement and future management to remain in control of the foreign lenders during the term of the mortgage, but the lines themselves, after the mortgage lien is paid, are in most if not in all cases to become the property of the Chinese Government. Thus far efforts of foreigners to obtain a share or stock interest in addition to the mortgage lien have usually been unsuccessful, though in many cases the length of time in which the loans are to run and the control of the lines remaining in the hands of those furnishing the funds may be considered as approaching an equivalent to ownership, so far at least as the present generation is concerned. In the American contract an issue of debentures is permitted which to a certain extent may participate in the prospective profits of the enterprise, and in the Belgian contract those supplying the funds are to participate in the profits during the thirty years' term in which the loan is to run before payment. That the intention of the Chinese Government is to finally and absolutely control its railways is further evidenced by the fact that in its agreements with those proposing to construct lines it requires that schools of instruction for Chinese in the construction and management of railways shall be established, and that a certain proportion of the employees of the road shall be natives and citizens of the Empire, thus providing for the education in railway construction and management of its own people by the time that the system of roads now proposed shall revert to the direct control and ownership of the Government. A series of regulations for railways and mines issued in December, 1898, requires that "in all cases every endeavor must be made to have the Chinese proportion of the

capital of such enterprise the greater, and there must be a proportion of at least three-tenths of the shares owned by the Chinese. Sanction will not be given in cases where all of the money is foreign." The regulations further provide that "the proportion of profits to be paid to the Government for railways will be four-tenths and for mines 25 per cent, to be handed to the board of revenue," a requirement which seems likely to prove, to say the least, embarrassing to railway enterprises which have not already secured concessions.

(Further details upon this subject will be found in a statement entitled *China's Present and Prospective Railways*, pages 2205 and 2207. See also accompanying map.)

INTERIOR WATERWAYS.

The waterways of China have been, up to the present time, its most important means of communication. Some recent events have added greatly to their value in this particular, and especially their relation to foreign commerce. Formerly they were not open to foreigners or their vessels, nor were any cities on their shores open to foreign commerce. In 1862 Hankow, located 582 miles from the coast, and readily accessible by the lower Yangtze, was made a treaty port, and in 1877 a number of other cities in the interior were opened to foreign residence and commerce. With these openings went the privilege of carrying foreign goods by steamers under foreign control, and to this list of interior cities several have been recently added. The most important developments, however, in the opening of interior waterways have occurred within a comparatively recent period. Not only has the Yangtze, the principal river of China, been opened for a distance of more than 2,000 miles, but the West River, the next in importance, which runs westward from Canton through the southern part of China, has also been opened for navigation by foreigners and a number of treaty ports established along its course, while other cities and towns have been designated as "stations" or "stages," at which privileges similar to those of treaty ports are accorded to foreign trade, but not to permanent foreign residence. Similar action has been taken with reference to a number of the smaller rivers in various parts of the Empire. Equally important with these, and of far-reaching value in the personal intercourse between Europeans and Americans on the one hand, and the Chinese citizens on the other, is the fact that recent action by the Chinese Government permits the navigation of all streams by small steam vessels of all nations, while other official acts permit foreign citizens to visit any and all parts of the interior of the Empire when carrying properly signed passports, whether for pleasure or business. These developments—the opening of numbers of rivers to foreign commerce and to the establishment of treaty ports and stations upon their banks, the right of travel to all interior points for business or pleasure by foreigners, and the privilege of navigating all streams with small steam vessels by which foreigners on business explorations may travel—seem likely to permeate the entire Empire and each community with foreign opinions, foreign methods, and sooner or later a market for foreign productions.

In addition to the rivers, numerous canals and lakes form a vast network of waterways which seem likely to rapidly become accessible to foreign commerce and foreign enterprise. The natural waterways of China probably aggregate 10,000 miles in length, while the canals and continuous waterways formed by connecting lakes and sections of streams add greatly to this length of navigable waters. On these waters vessels of all characters—steamers, vessels with sails, junks, rowboats, and house boats—are found in great numbers; the freight boats being in many cases towed on their upstream passage by parties of men specially employed for this purpose.

(For details see special article on this subject, pages 2210 and 2211.)

INTERIOR LAND TRAVEL.

Land traffic in the interior of China is a tedious process, and will doubtless so continue until the railways now projected shall come into active operation. Roads are proverbially and actually bad. Wheeled vehicles are confined almost exclusively to the wheelbarrow, and land transportation therefore carried on either by barrows engineered by individuals, or by packs upon ponies, donkeys, or the backs of men, while travelers by land must content themselves with similar conveniences of travel, either in wheelbarrows, upon the backs of ponies and donkeys, or by sedan chair carried by porters. Wagon roads are few and bad, and wagon transportation therefore is seldom undertaken. For details see pages 2212 and 2213.

TELEGRAPHS.

The telegraph system was introduced in China even earlier than the railway, which is described elsewhere. While it also met with considerable opposition in the beginning, its advantages were soon recognized by the Government in the opportunity which it gave for instant communication between Peking, the seat of government, and the capitals of the provinces. So important a factor in the maintenance of order and preparation for the insurrections and local troubles which have been so frequent a feature of Chinese history could not be neglected,

and as a consequence telegraph lines now connect Peking with the capitals of practically all of the provinces and extend far into the dependencies, connecting also with the ocean cables and the Russian trans-Siberian telegraph lines, thus putting not only the capital, but all of the provinces of China into speaking relations with all parts of the world. The telegraph lines of China are now between 3,000 and 4,000 miles in length, and being rapidly increased.

That this development is important both in its dissemination of general information and modern methods is evident, and that it is likely to be one of the important factors in the introduction of English as the general language of the far east is the belief of Lord Curzon, the present governor-general of India, for whose views upon this subject see page 2202.

POSTAL SYSTEM.

Until recently the postal system in China was very crude, and carried on largely through individual enterprise by runners and carriers. Within the past two years, however, an official postal system has been established by the Government and placed under control of Sir Robert Hart, who has so admirably conducted the customs service of the Empire for many years. Through this China has given notice that she will enter the Universal Postal Union of the World, and in conjunction with the already existing service a postal money-order system has been established which is described elsewhere in conjunction with the statement on banking and currency. (See articles on "Chinese postal system and money-order system," page 65.)

MONEY AND BANKING.

The money of China is uncertain as to quantity and quality. No accurate estimate has been made of the amount of money in circulation in the Empire, while no accurate statement can be made to-day of what its value will be to-morrow. Based upon silver, its value fluctuates with the changes in the market price of silver. The copper "cash," valued at about one-tenth of a cent, is the actual circulating medium, while the tael is the nominal standard for larger sums, it being merely a given weight of silver, and not a coin. Actual silver circulates in two forms, the "dollar" and the "sycee." The dollar was originally the Mexican dollar, and became a popular and generally accepted form of currency wherever obtained. So convenient was it that large quantities were imported for use as currency. More recently, however, mints for the coinage of "dollars" purporting to be of weight and fineness equal to Mexican coin have been established, not by the central government, but by the authorities of the various provinces, and the result is that the rivalry between these provincial mints has reduced the weight and fineness of the "dollars" which they issue until the provincial silver "dollars" are looked upon with distrust. Additional mints, however, are being established, the machinery for them being from the United States. Some half dozen of the cities of China have now their mints for the coinage of "dollars," and work is in progress upon local mints in other cities, so that by the end of the present year, according to a recent issue of the North China Daily News, at least ten different kinds of silver coins purporting to be "dollars" will be upon the market. In addition to this uncertainty may be pointed out the fact that the "tael" differs in various cities and provinces, the weight of silver recognized as a tael being greater at some points than at others. The consequence is that while the haikwan, or customs, tael was worth, on January 1, 1899, 72.2 cents (gold), the Amoy tael was worth but 71 cents, the Canton tael 70.8 cents, the Chinkiang tael 69.3 cents, the Ningpo tael 68.2 cents, the Chefoo tael 67.9 cents, the Hankow tael 66.4 cents, the Foochow tael 65.6 cents, and the Shanghai tael 64.8 cents. Even the "sycee," which is an actual quantity of silver cast in the form of a shoe with the weight written upon it in Chinese characters, is somewhat uncertain as to its value, both by reason of the constant fluctuation in the price of the silver which it contains and the uncertainty as to the fineness of the silver utilized.

All efforts to learn the exact fineness of the standard silver used in the sycee have been unsuccessful, though the estimates put the rate at ninety-seven one-hundredths, which is considerably in excess of the American coin, which is ninety one-hundredths fine. The sycee is merely an indefinite quantity of silver cast in the form of a woman's shoe, its actual weight being determined by agents or officers appointed by the merchants to weigh the sycees, accuracy and integrity on their part being insured by actual physical decapitation of those who are found dishonest. Even the "cash," a copper and zinc coin about the size of our 25-cent piece, having a square hole in the center for convenience in stringing quantities of them together, varies greatly both in fineness and weight, in some cases 1,000 of them being equal to a "dollar," while in others nearly 2,000 are required to equal a "dollar." Gold coin is practically unknown in China, no coins of this metal being made at the mints, and gold coins of other countries have seldom, if ever, circulated, though the value of the metal is fully recognized, and gold, whether in coin or bulk, proves a medium of exchange upon determination of its weight and fineness when occasion requires.

The uncertainty as to the quality and quantity of the metals contained in the various coins and measures of weight makes an attempt to indicate the relative value of the monetary units difficult and somewhat uncertain, though a recent official (consular) statement puts the relative values as follows:

10 cash = 1 conderin.
 10 conderin = 1 mace.
 10 mace = 1 tael.
 1 tael = 1½ ounces (avoirdupois) of silver.
 (Value of haikwan tael on January 1, 1899, 72.2 cents.)

Mexican dollars and local dollars thus equal about three-fourths of one haikwan tael in value, though no official relationship exists save in the weight and fineness of metal in the dollars compared with the standard tael.

All customs duties are collected in what is known as the "haikwan tael," which has a somewhat higher value than the tael standard accepted in the respective cities.

The paper money is under even less legal regulation than the metallic. There are few banks of issue in China, and those mainly located at Peking. These issue notes as low as 10 cents in value, but these have usually only a local circulation. Paper money was issued in China more than 2,000 years ago, and its use continued in a greater or less degree until about 1450, when it was suspended and has been but recently resumed, and that in but small quantities.

Chinese banks, especially those of Peking and the discount banks in the cities of the provinces, are under governmental supervision by reason of the fact that they perform the functions of a treasury for the Government, and therefore have a high standing with the business public. Foreign interests in the banking line are represented in nearly all cities where foreigners reside or visit, agents representing a number of great banking establishments being found in all cities of this class. The Hongkong and Shanghai Banking Corporation, incorporated in 1864, has a capital of \$10,000,000, and has its representatives in all the treaty ports and some of the other important cities of China, while the Imperial Bank of China, the Mercantile National Bank of India, the Russian Bank of Foreign Trade, the Bank of China and Japan, the Deutsch-Asiatische Bank, and the Central Bank of India, Australia, and China, also have agents and in some cases regularly established banking houses in many of the more important cities. Exchange quotations are published daily by bankers and brokers, and business transactions between any of the treaty ports and the great financial circles of America or Europe are thus rendered practicable. Business between the various treaty ports may thus readily be carried on through the banker's agents, and transactions between these points, in small sums, are facilitated by a postal money-order system which was put into operation by the Government about a year since, by which sums from \$1 upward may be transmitted on payment of a fee at the rate of about 2 cents per dollar, each remittance being limited to \$10, but there is no limit as to the number of remittances issuable to the same applicant.

The following shows the value of the taels of the respective provinces where issued on January 1 in 1897, 1898, and 1899, and on April 1, 1899:

VALUE OF TAEI IN TERMS OF UNITED STATES GOLD DOLLAR.

PROVINCE OR CITY.	JANUARY 1—			APRIL 1—
	1897	1898	1899	1899
Amoy76, 7	.68, 5	.71, 0	.70, 2
Canton76, 5	.68, 3	.70, 8	.70
Chefoo73, 3	.65, 5	.67, 9	.67, 2
Chinkiang74, 9	.66, 9	.69, 3	.68, 6
Fuchau70, 9	.63, 4	.65, 6	.65
Haikwan (customs)78, 0	.69, 7	.72, 2	.71, 4
Hankow71, 7	.64, 1	.66, 4	.65, 7
Niuchwang71, 9	.64, 3	.66, 5	.65, 9
Ningpo73, 7	.65, 9	.68, 2	.67, 5
Shanghai70, 0	.62, 6	.64, 8	.64, 1
Swatow70, 8	.63, 3	.65, 5	.64, 9
Takao77, 2	.69, 0	.71, 4	.70, 7
Tientsin74, 3	.66, 4	.68, 8	.68

The value of the haikwan tael, as computed by the Director of the Mint, has been as follows: 1874, \$1.52242; 1875, \$1.47896; 1876, \$1.38588; 1877, \$1.43082; 1878, \$1.37331; 1879, \$1.338; 1880, \$1.36318; 1881, \$1.34796; 1882, \$1.35193; 1883, \$1.31993; 1884, \$1.32224; 1885, \$1.26797; 1886, \$1.18413; 1887, \$1.16602; 1888, \$1.15, 1; 1890, \$1.14, 8; 1891, \$1.27; 1892, \$1.13, 7; 1893, \$1.01; 1894, \$0.84, 9; 1895, \$0.74, 9; 1896, \$0.80, 8; 1897, \$0.78; 1898, \$0.69, 7.

(The details of banking and currency in China will be found in special articles on this subject, pages 2232 and 2236.)

LABOR AND WAGES.

With the ports of China open to foreign capital and enterprise, in manufacturing, transportation, and the construction of railways, the question of labor and wages becomes an important one. While the introduction of local industries has at the points where they exist already led to a material increase in wages, up to the present time these incidents have had but a slight effect upon a nation of nearly 400,000,000 industrious, plodding, persistent workers. Reports of consuls and others who have opportunity to study the details of labor conditions in China indicate that the rate of wages of laborers ranges from 3 cents to 10 cents per day, except in the case of skilled labor, where prices are from 18 cents to 22 cents per day. Consul Gracy, of Fuchau, writing in October, 1897, said that cooley labor could be hired for from \$1.50 to \$3, Mexican, per month—equal, in American currency, to from 75 cents to \$1.50; good mechanics for from 20 cents to 30 cents per day—equal to from 10 cents to 15 cents, gold; and added that the wages of the laboring classes have not materially increased since 1890, when the Mexican dollar was quoted at 94 cents, as against 45 cents at the date of his report upon this subject. An official report received by the State Department in 1895 gives the wages of barbers at 3 cents per day, tailors, 10 cents; carpenters, 11 cents; cabinet makers and blacksmiths, 13 cents; brass workers, 16 cents; cotton-factory hands, 18 cents, and cotton-mill machinists, 21 cents per day.

(For details regarding wages and prices, see article under that title, page 2223.)

MANUFACTURING.

That manufacturing in China is likely to assume an important position and aspect must be apparent from an examination of the rapid development in this industry during the past few years. The treaty of Shimoneseki, which followed the war between China and Japan, permitted the introduction of foreign machinery for manufacturing purposes, and gave to citizens of Japan many rights as manufacturers which did not formerly exist, but which under the "favored-nation" clause of other treaties were thus granted to representatives of all nations having treaties with China. The result of this has been a rapid enlargement of the manufacturing industries of China, the introduction of modern machinery, especially for the manufacture of cotton goods, steam "filatures" for reeling the silk from cocoons, electric railways, electric lights, telephones, and many other features tending to quicken enterprise and develop the manufacturing industry. This development is as yet very small compared with the population of this vast Empire and with its demands, but that it is the seed which may prove the beginning of elaborate manufacturing industries is evident from the details of the statements which will be found on subsequent pages. That the probability of increased manufactures in China reduces materially the prospect for a general market for American merchandise, however, is not considered likely. On the contrary, the increased occupation, earnings, and requirements which the manufacture of a few staple articles will give will open a market for a greater variety of the goods now manufactured in the United States and of which the facilities for manufacture in China can not be expected to be developed for many years.

(For statements regarding manufacturing conditions and prospects in China, see page 2219.)

COTTON AND COTTON GOODS.

The cotton industry and cotton demand in China are an especially important subject in considering that country from the standpoint of American commerce. Cotton and cotton goods now form the largest item of our exports to China, and reports of the British officials who control the customs service of China state that American cotton goods are gaining in the markets of that country, while those from Great Britain are falling off in importations. It is also a fact, however, that the production of cotton and the manufacture of cotton goods in China are being stimulated and rapidly developed, and that the importation of raw cotton and cotton yarn from India and of cotton yarn from Japan has rapidly increased. While neither the native nor the Indian cottons compare favorably with those from the United States, their proximity and the willingness of the masses to be content with the coarser goods which are thus produced make it apparent that American cottons, whether raw or manufactured, will meet with sharp competition, as they are already doing, in the native products and those of the countries more immediately adjacent. The demand for American cotton goods, however, continues, and especially for the finer grades and varieties, which are not manufactured in the local mills; and while a rapid increase in the local manufacture of the coarser grades may be expected, it is believed that American cottons of the finer grades will not only continue their present relations with the trade of China, but increase the proportion which they now have in the imports into that country.

(For details on this subject, see articles on page 2222.)

TARIFF AND "LIKIN."

Chinese tariff rates, where they exist, average about 5 per cent ad valorem. Many articles are admitted free of duty, and on some the rates are higher than 5 per cent, but in general terms this is about the average rate. To this, however, there is a material addition where the goods are intended for interior points. The Chinese Government, while it collects a part of its revenue from customs, relies largely upon the provinces to supply revenue, and arbitrarily names each year the sum which each province must supply, leaving to the officers of that province the methods by which this is obtained. The consequence is that each province is permitted to collect a tax on goods entering it from the adjacent provinces, and this custom has been extended to the subdivision of the provinces, so that goods in transit are frequently compelled to pay taxes every few miles. As a consequence, the interior taxes, known as "likin," became not only the terror of importers, but sometimes almost prohibitory. So serious was this system in its effects upon attempts to introduce foreign goods that, upon the insistence of foreign ministers, the Chinese Government announced that an addition of 50 per cent to the rates paid at the custom-houses would insure passage of the goods to any point in the interior without the exaction of likin taxes. This was gladly accepted by foreigners desiring to do business in the interior of China. The additional 50 per cent on duties was paid and "transit passes" issued for the goods in question, purporting to authorize their free transit to any point in the Empire. Actual experience, however, shows that these transit passes do not always accomplish what was expected. The local authorities in many cases refused to recognize them, insisting upon their right to raise revenue, since the additional revenue paid at the custom-house goes directly into the treasury of the general Government, while in other cases, where the likin is not insisted upon, local taxation is imposed in other forms; so that there are still obstacles to internal traffic through the vexatious likin and other systems of local taxation.

The Chinese tariff does not exist by the methods which create tariffs in countries having legislative bodies, but was created by edict and treaty agreements with Great Britain and other countries, and as the assent of the nations having commercial treaties with China would now be necessary to its change, the recent agitation in behalf of its revision has made little progress.

There is also an export duty on a number of important articles, including tea, silk, and raw cotton, the collections from the duties on exports being in excess of those on imports. The duties collected on imports in 1896 were 7,669,640 haikwan taels, and those on exports 8,455,528.

One important feature of the Shimonoseki treaty in its effect upon the imports into China is in the fact that it provides for the admission of all foreign goods not specifically prohibited, while before that time the Chinese authorities held that all goods not specifically mentioned in the tariffs should be excluded.

(For full Chinese tariff, see page 2256; for statements regarding Chinese taxation, likin, etc., see page 2231.)

THE CUSTOM SERVICE.

The requirement that consuls should become answerable to the Chinese Government for the duties and dues payable by citizens subjects of the countries represented by them was abolished in 1851, and in 1854 a foreign inspectorate was established at Shanghai at the request of the Chinese authorities to assist in the administration of the customs. It was agreed that representatives of the countries having ministers or consuls in China should jointly take charge of the customs service of China, thus in fact transferring the collection of customs dues of that country into the hands of foreigners. The first paragraph of the agreement, which was made on June 20, 1854, was as follows:

Rule 1. The chief difficulty experienced by the superintendent of customs having consisted in the impossibility of obtaining custom-house officials with the necessary qualifications as to probity, vigilance, and knowledge of foreign languages required for an enforcement of a close observance of treaty and customs regulations, the only adequate remedy appears to be in the introduction of a foreign element into the custom-house establishment in the persons of foreigners carefully selected and appointed by the "taotai," who shall supply the deficiency complained of and give him efficient and trustworthy instruments wherewith to work.

The result of this agreement was the appointment of a board of inspectors, L. Carr being the American, T. F. Wade the British, and Arthur Smith the French member of that board. The chief responsibility for the organization fell upon the British member, Mr. Wade, because he alone of the members was familiar with the Chinese language, and this, coupled with the fact that a large proportion of the foreign trade of China was with British merchants, resulted in a retention of British citizens as the head of the customs service from that to the present time, Mr. Wade having been succeeded by H. N. Lay, a clerk in the British consulate, who was in turn succeeded by Sir Robert Hart, the present efficient inspector-general of customs. He names the inspectors of customs at each of the treaty ports, selecting them from representatives of the various nations having treaty and trade relations with China, and they enforce the customs laws and regulations, collect the duties, and report to the inspector-general, who in turn is responsible to the Chinese Government for the entire foreign customs service. Recently his duties have been greatly enlarged by the placing in his hands of the light-house service, and more recently the postal system, which has been within the last two years established and China brought into the Universal Postal Union.

HISTORY OF TREATY PORTS.

Prior to 1842 all trade of foreign nations with the people of China was conducted at a single port, Canton, and through Chinese merchants located at that port. These were termed "hong merchants," the word "hong" meaning warehouse. Foreign merchants who desired to offer their goods for sale in China were required to place them in the "hongs" or warehouses of these merchants, who, representing the owners, disposed of them to the native merchants and were answerable to the Chinese Government for the customs revenue derived from the foreign trade. The East India Company, which then controlled British trade with China, had a "factory" at Canton under supercargoes prior to 1834, but was permitted to trade only through Chinese "hong" merchants. The term "factory," it may be remarked, was not used under these conditions in the sense now ordinarily recognized, but meant simply a trading station or warehouse, the term growing out of the word "factor," meaning agent or representative. The monopoly of the East India Company having been abolished in 1834, British merchants were represented at Canton by superintendents of trade, but were still required to transact business with and through the "hong" merchants, and similar requirements also existed with reference to American, French, Portuguese, and, indeed, all merchants or traders desiring to transact business and maintain commercial relations with the people of China. A result of the war between Great Britain and China in 1842 was a treaty by which each agreed that the ports of Canton, Shanghai, Foochow, Ningpo, and Amoy should be opened to the commerce of Great Britain, British subjects to be permitted to reside in those cities and trade with whatever persons they pleased, and British consuls to be appointed and become answerable to the Chinese authorities (in lieu of the "hong" merchants) for the dues and duties payable by British subjects. By the treaty made between China and the United States July 13, 1844, and with France October 23 of the same year, similar provisions were extended to the citizens of those countries.

The five ports above named remained for nearly twenty years the sole gateways for foreign citizens and foreign commerce to the interior of China. They were all located on the coast, Shanghai near the entrance to the great Yangtze River, the Mississippi of China, Canton at the mouth of West River, the next important navigable stream of the Empire, and Ningpo, Foochow, and Amoy at points on the coast between Shanghai and Hongkong, no treaty port during that time being permitted within several hundred miles of the capital, although its location is near the coast and near to suitable ports at which foreign citizens and merchandise might have been readily admitted had the Government so desired. It was not until 1860 that the number of treaty ports was increased, and then by the addition of a single one, Swatow, also a long distance from the capital. In 1861, however, six new treaty ports were opened, one of these, Tientsin, being within 80 miles of the capital, Pekin, and 30 miles from the mouth of the river which admits ocean traffic to its wharves. This group of ports opened in 1861 contained the first interior ports of the Empire opened to foreign trade, Hankow, located on the Yangtze, 582 miles from the ocean, being the most important, while Kiukiang, also located on the Yangtze, lay midway between Hankow and the ocean. Chefoo, near the entrance to the Gulf of Pechili, the gateway of Tientsin and Pekin, and also near to the recently acquired British port of Wei-hai-wei, was likewise opened by this treaty, as was also Newchwang on the opposite (northern) side of the Gulf of Pechili, thus giving three treaty ports—Chefoo, Tientsin, and Newchwang—upon the borders of the great gateway to the capital, the Gulf of Pechili. In 1876, Kiungchow, located upon the island of Hainan at the southernmost part of the Empire, was opened as a treaty port, and in 1877 four additional ports, Ichang, Wuhu, Wenchow, and Pakhoi, two of these—Ichang and Wuhu—being in the interior on the Yangtze, Wenchow on the eastern coast, and Pakhoi on the extreme south upon the Gulf of Tonking.

In 1887 Kowloon and Lappa, lying between Hongkong and Canton at the mouth of the West River, were opened under the opium agreements of 1886 and 1887. In 1889, by the French treaty of Tientsin, Lungchow and Mengtsz, in the extreme south and immediately adjacent to French Indo-China, both of them distant from the coast, but near to the border line between southern China and French Indo-China, were opened as treaty ports. In 1891, Chungking, the principal city of Szechuan, the largest and most populous province of the Empire, lying 2,000 miles from the coast at the head of navigation on the Yangtze, was opened as a treaty port. In 1894, by the Sikkim-Tibet convention, Yatung, lying in the dependency of Tibet, nearly 3,000 miles from Shanghai, the great gateway of China, was made a treaty port, though only accessible by pack animals and carriers. In 1896, under the Japanese treaty of Shimonoseki, signed in 1895, Hangchow, on the coast near Shanghai, and Soochow and Shasi in the interior, were opened; and in 1897 Samshui, Wuchow, and Szemao, in the southern part of the Empire, were opened as treaty ports at the solicitation of the French Government, which is pressing for an opening for its commerce from its possession, Tonkin, lying on the southern border of the Empire. In 1898 three additional ports were opened as treaty ports—Funing, on the coast nearly opposite the island of Formosa, Yochow, far in the interior and located upon Lake Tunking, and Chinwang, on the Gulf of Pechili, connected by rail with Pekin, the capital.

It is proper to observe that the slight discrepancies between the dates above mentioned and those given in the table of treaty ports, with dates of opening, population, and trade, are due to the fact that the actual opening

was in some cases slightly delayed beyond the time named in the agreements from which the above statements are quoted.

At the ports open to foreign trade the foreign maritime customs take cognizance only of cargoes carried in foreign bottoms, i. e., foreign-built ships, whether foreign owned or Chinese. Side by side with the foreign customs at every port is the old native custom-house, which still controls the trade in native junks, and levies duties according to a tariff which is not necessarily the same as the foreign tariff. Besides the ports open to foreign trade there are a great number of places both on the coast and inland where the Chinese Government has from time immemorial established custom-houses. These are known by the generic name of "kwan," and as such are readily distinguished from the modern likin stations which are generally termed "chia" or "ka." It would be tedious to enumerate all these places, but briefly they include every port of any importance on the coast and inland waters, and certain passes on the main trade routes, such as Chang-chiakou and Shan-hai-kwan on the northern frontier, and Taiping and Kanchow between Kwangtung and Kiangsi.

A few of the richer collectorates have always been and still continue to be filled by a nominee of the court—a Manchu, of course. This is notably the case at Canton, where the controller is known as the "hoppo." He is independent of the local officials, and sends his reports and accounts direct to Peking, and not through the provincial authorities. The other collectorates are managed through the local authorities, and all their returns and accounts are sent forward in the usual way through the governor of the province.

PRIVILEGES OF FOREIGNERS IN TREATY PORTS.

Foreigners in treaty ports, while they have permission to trade with the citizens of China, are subject in a large degree to the regulations established by their own authorities. A definite area is set aside for their occupancy, a certain allotment being made to each nation, these being under the supervision of municipal councils composed exclusively of foreigners and policed by foreign policemen. The local regulations are established and administered by the occupants of these districts so set aside and under direction of the consuls appointed by the governments of their respective countries. Questions of law and justice are decided in the consular courts in all cases where they arise between foreign residents, while in certain classes of cases between the foreigners and Chinese, some are brought in the consular courts and others in the Chinese courts, those in which the foreigner is defendant being tried in the consular courts, while those in which Chinese citizens are defendants are tried in their own courts. At Shanghai, for instance, the foreign settlement lies outside the north gate and stretches north and northeast for two miles along the banks of the river and consists of three "concessions" known as the French, British, and American concessions, respectively. The first mentioned is a narrow stretch, bounded on the north by a canal; thence for three-fifths of a mile to the Woosung River stretches the British settlement, which was the first laid out. Beyond this lies the American settlement, called Houkew, which in 1863 was incorporated with the British settlement for municipal purposes. The French settlement has its own municipal government. There is no restriction, however, as to the nationality of residents or land renters in any of these concessions. The municipal management has been so satisfactory that Shanghai has earned the distinction of being the "model settlement" of the East. The streets are well made and kept and are lined with imposing buildings, those parallel with the river being named after Chinese provinces and the cross streets after cities. The western half of the settlement is occupied largely by Chinese, for whose benefit a mixed court has been provided. In all civil, criminal, and political matters, subjects and citizens of the different treaty powers are, as elsewhere in China, subject to the jurisdiction of their own consuls, except in the cases of Great Britain and Germany, which have provided special courts. A handsome street stretches along the river frontage of the three foreign settlements, and the public buildings are large and fine, while the municipal offices, club house, hospitals, and churches are all admirable.

In Canton the foreign settlement is located upon the so-called "sand flats," an artificial island about 3,000 feet long and 1,000 feet broad, surrounded with a substantial embankment of granite, and separated from the Chinese city by a canal 100 feet wide. Good roads have been constructed along the margin of the concession, and that part facing the river is planted with trees and shrubs, forming a pleasant promenade. Streets are laid out and houses built, and the residents have formed themselves into a committee for municipal purposes. There are a large number of "hongs," or warehouses, and wholesale as well as retail establishments, a club house, a good library, churches, and residences, though some of the English and Portuguese merchants doing business at this point retain their residence and business headquarters at Hongkong and Macao, which are a few hours distant by boat. The land occupied by these foreign settlements is not considered the property of the governments whose people occupy it, but is merely leased to the occupants by the Chinese Government.

At Tientsin, the foreign settlement, called "Tsz'-ch'lin," or Red Balmy Grove, is located two miles below the city, and consists of three "concessions," as in Shanghai—the French nearest the city, then the British (the largest and most important), and lastly the American. In the other and less important treaty ports conditions as to

the residence and government of foreigners are similar, though modified necessarily by the number of residents and other conditions.

The foreign population in the various treaty ports of China, according to the latest estimates, is as follows:

NATIONALITY.	FIRMS.		SETTLERS.	
	1897	1896	1897	1896
British	374	363	4,929	4,362
German	104	99	950	870
American	32	40	1,564	1,439
French	29	29	698	933
Dutch	6	4	81	69
Danish	4	4	147	146
Spanish	5	4	362	410
Swedish and Norwegian	3	2	439	407
Russian	12	14	116	125
Austrian	6	4	106	74
Belgian	4	5	68	72
Italian	5	5	120	138
Japanese	44	87	1,106	852
Portuguese	8	6	975	871
Not under treaties		5	6	87
Total	636	672	11,667	10,855

DESCRIPTION OF THE PRINCIPAL TREATY PORTS.

The treaty ports being the doors through which foreign trade must enter China, it seems appropriate to present somewhat in detail the trade conditions at each of those places, and especially the popularity of, and demand for American products, the class of goods imported, and the details of importations for a term of years, thus showing the increase or reduction for each class of goods at each port, and enabling American manufacturers and merchants to determine not only the general demand for their particular classes of goods, but the point at which that demand seems greatest and most likely to increase if properly cultivated.

SHANGHAI.

Shanghai is the New York of China. It occupies a position on the coast quite similar to that of New York on our own eastern coast, and its percentage of importations into China is about the same as that which New York enjoys in the United States. The large share of the foreign trade of China which Shanghai controls is due largely to its position at the mouth of the great artery through which trade flows to and from China—the Yangtze-Kiang. Transportation in bulk in China up to the present time having been almost exclusively by water, and the Yangtze being navigable by steamers and junks for more than 2,000 miles, thus reaching the most populous, productive, and wealthy sections of the country, naturally a very large share of the foreign commerce entering or leaving that country passes through Shanghai, where foreign merchants, bankers, trade representatives, trade facilities, and excellent docking and steamship conveniences exist. The lines of no less than eight great steamship companies center at Shanghai, where they land freight and passengers from their fleets of vessels which are counted by hundreds, while the smaller vessels, for river and coastwise service, and the native junks are counted literally by thousands.

The Yangtze from Shanghai westward to Hankow, a distance of 582 miles, is navigable for very large steamships that are capable of coasting as well as river service. Hankow, which with its suburbs has nearly a million people, is the most important of the interior cities, being a great distributing center for trade to all parts of central and western China, and thus the river trade between Shanghai and Hankow is of itself enormous, while the coastwise trade from Shanghai, both to the north and south, and that by the Grand Canal to Tientsin, the most important city of northern China, is also very large. Prices of lands and rentals have increased with great rapidity in the past few years, rents having increased by from 50 to 100 per cent, and the enhanced cost of living is placed by competent judges from 20 to 30 per cent. These advances are due, it is said, to the rapid increase of manufacturing industries at that point by which employment has been given to a large number of people at better wages than ever before. The local cotton mills during 1897 and 1898 were working night and day, the number of spindles having been increased to the full capacity of the various factories, while other manufacturing establishments were also pushed to their utmost capacity. The number of steamers entering the port of Shanghai in 1897 was no less than 2,888, with a tonnage of 3,805,440, while the sail vessels numbered 3,318, with a tonnage of 3,973,028. The total number of vessels entering and clearing during the year was 12,437, or more than

[For value of standards of currency, weight, and measure, see page 2256.]

1,000 per month. The foreign imports, which in 1891 amounted to 77,336,115 haikwan taels (value of tael in 1891, \$1.27), amounted in 1897 to 131,114,307 haikwan taels (value of tael in 1897, 78 cents). The native produce imported amounted to 47,000,000 taels in 1891 and 55,000,000 taels in 1897. The imports from the United States in 1896 amounted to 11,726,393 haikwan taels out of a total of 130,098,304 haikwan taels, while in 1893 they amounted to but 5,193,534 out of a total of 83,974,245. Thus, while the total imports of Shanghai increased a little over 50 per cent in the three years, those from the United States more than doubled.

In 1893 the imports from Japan were larger than those from the United States, while in 1896 those from the United States exceeded those from Japan. Great Britain, Hongkong, and India still exceed the United States in the amount of their imports at Shanghai, those of India in 1896 being 23,027,056, Hongkong 27,421,723, and Great Britain 42,738,204 haikwan taels, while from the continent of Europe (Russia excepted) the imports were 8,573,575, from Russia 1,759,787, and from British North America 1,947,332. American drills, jeans, and sheetings formed an important part of the importation of cotton goods. The total importation of cotton drills in 1897 was 1,700,000 pieces, of which 1,500,000 pieces were from the United States and 143,000 pieces from England. Of sheetings the number of pieces in 1897 was 3,000, of which 2,426 pieces were American. Of the 67,000,000 gallons of kerosene imported at Shanghai in 1897, 37,000,000 gallons came from the United States, while, as shown by the total value figures quoted above, the United States had a large share in nearly all of the important importations of the year. Commenting upon the commerce of the port in 1897 the commissioner of customs in his official report says:

In cotton goods, with the exception of India T-cloths, American drills, English jeans, American sheetings, cotton lastings, and Japanese cotton cloth, all of which show a substantial increase, there was a downward tendency. Shirtings and drills from the United States and Canada largely outnumbered those of English make, for the reason that, it was alleged, freight from America was much less than from England. The reexports of cotton goods improved 6 per cent, American makes counting for a good half of the appreciation. A considerable increase in the kerosene oil trade is still to be noted. Arrivals and deliveries for 1897 were nearly 50 per cent in advance of 1896 and 86 per cent over 1895. This increase has every prospect to continue, though American oil retains its premier position, while Russian and Sumatra have taken their fair share in the increase. The proximity of Sumatra to the China market gives its oil production an advantage which has been fully availed of and followed up by the establishment of bonded and storage tanks.

In his report for 1896 the collector calls attention to the fact that American sheetings show an advance in that year of 360,000 pieces, and that American jeans have risen from 39,000 to 53,000 pieces, and American drills have nearly doubled as compared with those of 1895. In his 1894 report the collector points out the danger to American oils in the fact that the Russian kerosene oil company had arranged for a tank for conveying oil in bulk to Shanghai and its storage in tanks, though he adds that American oil has, in spite of this fact, more than held its own. In 1895 he pointed out the fact that American oil had, probably as a result of this fact, greatly decreased, and that Russian "case" and tank oil had nearly doubled, though in 1896 and 1897 an increase in the receipts and sales of American oil is again noted.

(For details of imports at Shanghai see page 2282.)

CANTON.

Of the treaty ports of China the next in importance and age is Canton. Indeed, the foreign trade with China began at this point, though it was carried on, as already indicated, through the "hong merchants" prior to the treaty of 1842, by which it was agreed that foreign merchants should have the right to reside and conduct business at certain places in China. The agreement of the treaty of 1842 to open Canton was not carried out in a satisfactory manner, and it was not until after a second war between Great Britain and China, in 1856, that the city was freely opened to foreigners and direct foreign trade. The customs statements of imports at Canton do not give a fair picture of its real business, because of the fact that a large share of the imports which come from Hongkong and Macao pay customs duties at Kowloon and Lappa, which are mere customs "stages" lying between Canton and those two important trade stations lying at the mouth of the river upon which Canton is located a few miles inland. The customs report of Canton shows foreign importations of but 14,000,000 haikwan taels, though those of Kowloon and Lappa, insignificant places at the seat of customs collection, show for Kowloon foreign importations in 1897 valued at 13,000,000 haikwan taels and those of Lappa 3,500,000 haikwan taels. Canton is deemed especially important in its relations to the trade of China because of the recent opening to trade of the West River, which seems likely to prove to the trade of southern China what the Yangtze is to the central part of the Empire, and as Canton lies at the mouth of that river it is expected that its commerce will greatly increase. The opening of the West River gives water transportation several hundred miles into the interior of southern China through the western part of the provinces of Kwangtung, whose population is over 29,000,000, and Kwangsi, with a population of over 5,000,000. This insures water communication with the important city of Nanning and with the already opened treaty ports of Wuchow and Samshui. In addition to these four other places, Kongmoon, Kumchuk, Shiuhing, and Takhing, have been established as "places of call" or "stages" for the landing and shipping of passengers and goods by steamers supplied with special river certificates for that purpose. Canton

alone has a population of 1,600,000, being the largest city of China. Commenting upon the foreign trade of Canton, the commissioner of customs, Mr. E. B. Drew, writing in May, 1898, of the business of 1897, says:

The comparative table of imports shows an increased importation of several of the chief articles of foreign trade, conspicuously white and gray shirtings, T-cloths, Indian yarn, matches, and kerosene oil. The key to this gain lies chiefly in the reassertion of the treaty transit pass right. The enforcement of this right, with the effect it has wrought, must be pronounced the one distinctive and potent feature of the year's trade. And it is not alone that this revival of the transit privilege has promoted the import of a certain few articles which have literally availed of it—notably those just named—but it has also operated unseen, so to speak, in compelling the reduction of duty charges on junk-borne imports, not included in our statistics, lest certain articles hitherto availing of the junk as their carrier might desert it and patronize the steamer for the sake of gaining the privilege of the pass. Furthermore, this transit revival has compelled the reduction of the likin rates, lest otherwise all sorts of articles should seek pass protection and likin revenue thereby disappear altogether—so far as derivable from foreign goods. The treaty transit pass acts, as it were, to prevent the provincial authorities from building up the containing sides of the revenue reservoir above the height which its own unchangeable gauge fixed. The importation of white shirtings is 26 per cent above that of 1896, and of gray shirtings and T-cloths it is 28 and 38 per cent, respectively. The Chinese dealers at Canton have not been satisfied with their year's trade. The low exchange of July, August, and October was against them, and diverted their country buyers to Hongkong in search of lower prices. The opening of the West River has put the Wuchow, Kumchuk, and Kongmoon buyers in more direct touch with Hongkong than before, and the transit privilege has enabled interior and distant buyers to get their purchases laid down on the spot through foreigners cheaper than if bought in Canton of the piece-goods hong. The actual quantity of piece goods which took out transit passes can not be called large, and yet in the case of white shirtings it amounted to 11 per cent of the entire import, and, similarly, to 18 and 38 per cent of the import of gray shirtings and T-cloths. The great dealers—the piece-goods guild—of Canton are not favorable to the use of transit passes. They themselves undertake to pay the Tso-li tax on all piece-goods, and to collect certain other kindred taxes for a commission; and if the country buyers can get out the passes (through foreigners, for Chinese do not yet apply for them direct) these buyers will give the piece-goods hong and their wares, as well as the Tso-li tax, the go-by altogether. I stated above that the revival of the transit pass privilege has compelled the reduction of provincial likin rates. In no case is this better exemplified than in that of cotton yarn. With the opening of the West River the yarn trade was leaving the junk for the steamer to an extent startling both to the superintendent of the native customs (the hoppo) and to the likin board. The hoppo reduced his tariff by 45 per cent and the likin board devised a transit pass of its own, to be issued on payment of a single sum representing the aggregate of the three or four likins of diverse kinds hitherto leviable. This arrangement was accompanied by facilities in the details of issue and treatment, and the pass itself is guaranteed to frank yarn throughout the province, and to protect it from any and all delay at likin barriers, on pain of summary punishment for the offending likin officer. The importation of kerosene oil is 32 times as great as in the preceding year. This speaks volumes for the value of the treaty transit pass, under which 95 per cent went inland, some to places 600 miles distant.

Vice-consul Alf, writing from Canton to the State Department in October, 1897, says of the trade of that city:

The consular district of Canton embraces the two southernmost provinces of the Chinese Empire, Kwangtung and Kwangsi, literally the broad east and the broad west, with a population estimated between twenty and twenty-five millions, including also the island of Hainan.

The value of declared exports to the United States from this port was, from July 1, 1896, to June 30, 1897, both dates included, \$3,751,332.73, a decrease of \$543,739.53 as compared with the previous year. This decrease was probably due to the disturbed commercial relations caused by the anticipation of the new tariff act of this year.

There are no direct imports from the United States to this port. These are effected chiefly through Hongkong. Hence, it is a most difficult matter to obtain correct statistics as to the value of these imports. But a rough estimate of these imports for the calendar year of 1896 is given in the subjoined table, believed to be approximately correct:

ESTIMATED VALUE OF IMPORTS FROM THE UNITED STATES, AT CANTON.

ARTICLES.	Taels.	United States currency. (a)	ARTICLES.	Taels.	United States currency. a
		Dollars.			Dollars.
Shirting, white.....	125,251	91,400	India-rubber shoes.....	11,132	8,100

Ginseng, clarified and crude.....	27,459	20,000			

a The reductions to United States currency (round numbers) in this report have been made on the basis of the valuation of the tael given by Vice-Consul Alf—73 cents.

In the following table is given the summary of the trade in foreign goods at the port of Canton for 1896:

	Haikwan taels.	United States currency.
Imports from—		<i>Dollars.</i>
Hongkong	11,486,169	8,385,200
Japan	79,635	58,100
Cochin China, Tonkin, and Annam	429,879	313,800
Siam	137,913	100,670
Other places	24,161	17,630
Total from foreign countries	12,157,757	8,875,100
Imports from Chinese ports	150,669	109,680
Total foreign imports	12,308,426	8,984,780

Of the above imports, the sum of 109,340 haikwan taels (\$79,818) was reexported to foreign countries and Chinese ports, leaving a net total of foreign imports amounting to 12,199,086 taels (\$8,905,000).

TIENTSIN.

Tientsin is the most important city of northern China, being located at the head of the Gulf of Pechili and but 80 miles from the capital, Pekin, with which it is connected by water and by a railway line. Another completed railway line runs northeastwardly to Shanhai-kwan, and an elaborate railway system is projected southward from this point through the populous provinces of Shantung and Kiangsu to connect Tientsin with Shanghai. In addition to these, the Grand Canal, the most important of the great artificial waterways of China, has for centuries connected Tientsin with the Yangtze-Kiang and Shanghai. Its population is in round numbers 1,000,000, and its imports, which in 1888 were less than 29,000,000 haikwan taels, were in 1897 more than 53,000,000 haikwan taels, having thus nearly doubled during the decade. The commissioner of customs, Mr. Alfred Hippisley, writing in 1898 of the 1897 trade, calls attention to the importance of American trade at that port, and adds that it is the only trade which increased in 1898 over that of 1897, saying that American drills, American sheetings, and American kerosene had especially increased in imports during the year, while the cotton goods from other countries were showing a decrease. Another interesting fact to which Commissioner Hippisley calls attention is that the new railway line recently built to connect Tientsin with Pekin is already proving extremely popular with the Chinese. On this subject he says:

It is astonishing how speedily Chinese, despite their reputed conservatism, adapt themselves to a new environment and make the most of increased transport facilities offered them. Already Pekin fruit is sent direct to Tanku for shipment south, and Pekin is similarly supplied with southern fruit, and traffic generally developed so rapidly that it soon became necessary to double the line.

Consul Reade, of the United States, says that Tientsin ranks in commercial importance next to Shanghai and Canton, and in a report to the State Department dated October 14, 1897, says:

Tientsin, by its geographical position, is the point of accumulation and distribution of all the merchandise destined for the United States or intended for consumption in the northern provinces of China. Direct shipments from the United States to Tientsin are impracticable, it being in all cases more advantageous to ship to Shanghai or Hongkong and thence transship to the steamers of light draft that ply between those ports and Tientsin. * * * The main articles of export from Tientsin are bristles, feathers, skins and furs, sheep's intestines, straw braid, and sheep's wool. The exports of all these articles have greatly increased over the corresponding three quarters of 1896. The causes are easy to state. In the early part of this year merchants were making shipments in order to have them entered under the provisions of the Wilson tariff bill.

During the past quarter there was a decided slump in the price of silver, and in a silver-using country cheap silver always stimulates exports.

Wool, especially, is still going forward in large quantities, and the volume of business in exports from Tientsin to the United States will exceed that of any previous year in the history of this consulate.

I am pleased to state that the sale of our wines (from California), provisions, and manufactured articles, such as clocks, lamps, locks, bicycles, etc., has increased considerably more than usual during the past year.

I would advise manufacturers of boots and shoes to send illustrated catalogues and price lists to the general storekeepers mentioned elsewhere in this report. American boots and shoes are not as yet known in this port.

HANKOW.

As Shanghai, Canton, and Tientsin, located at the central, southern, and northern extremes of the coast of China, are the most important of its exterior treaty ports, Hankow is the most important of the interior points designated as treaty ports. It is located on the Yangtze-Kiang, 582 miles from the ocean, and is reached by lines of large seaworthy steamers. Designated as a treaty port in the treaty of 1858, it was not opened until 1861. It is splendidly situated, in the very heart of the country, in the center of a network of rivers and lakes unsurpassed elsewhere, and, with its suburbs, has a population of nearly 1,000,000, while the province of Hupeh,

of which it is the capital, has a population of 22,000,000; while Ngannhei, which adjoins it on the east, has a population of over 20,000,000; Honan, on the north, 22,000,000; Kiangse, on the south, 24,000,000, and Hunan, on the southwest, 21,000,000, all of them accessible by the waterways, natural and artificial, of this section. The gross value of the trade of Hankow in 1897 exceeded that of any previous year by nearly 8,000,000 haikwan taels, the imports of foreign merchandise alone amounting to 23,000,000 haikwan taels, against 19,000,000 haikwan taels in 1895.

Practically all of the imports of foreign goods reach Hankow from Shanghai and other ports of China, where they have been entered and duty paid, the value of that imported direct from foreign countries being but 175,000 haikwan taels. The importance of Hankow is rapidly increasing by reason of the proposed construction of a railway line or lines to connect it with Peking at the north and Canton at the south. A line has already been constructed from Peking southward past Tientsin to Chinting by a Russian company, while another is projected from Chinting to Hankow by a Belgian company, and from Chinting to Hankow an American company is proposing to build a line. This will put Hankow in direct rail communication with Canton at the south of China and Peking at the north, while it will at the same time be in direct water communication by numerous lines of large and swift steamers with Shanghai, the greatest port of the country, and lying almost directly east of it. At the west it is already in direct water communication with the largest and most populous province of China, Szechuan, which alone has a population of over 65,000,000 and is one of the most productive and important of the sections of interior China. Upon the commerce of Hankow, and especially the demand for goods from the United States, Consul Child in October, 1897, reported to the State Department as follows:

As Hankow and the other cities in this district are located on the upper or central Yangtze River, most of the goods received here have to pass through the Shanghai custom-house and are reshipped up the river to local purchasers, mainly Chinese, either by the various lines of steamers, or by junks and larchas. The high water in the river at present jeopardizing the crops, the famine that has been prevailing on the borders of the provinces of Hupeh and Sze-Chuan and the fluctuation of silver have had a tendency to prostrate business; but the merchants look forward for an increased trade this winter with the upper country as far as Sze-Chuan. It is thought that an effort will be made to start a line of small steamers from Ichang to Chungking, as the navigation of that portion of the river is now under the control of the trackers (coolies that convey the junks up the rapids), most of whom have been pressed by the officials to carry rice to the suffering persons.

The import of United States kerosene has held its own, being 1,870,050 gallons for the quarter ending June 30 last, against 1,431,000 for the quarter ending June 30, 1896. During the same quarter, the importation of Russian oil was 1,916,400 gallons, against 1,515,700 gallons ending the same quarter June 30, 1896. One reason that the Russian oil is obtaining a foothold here is that it sells at about 8 per cent less than the American oil. There were also, during the last quarter, 387 gallons of Langkat (Dutch oil) imported here.

The demand for United States textile goods, especially drills, is steadily increasing on account of their superior quality. The inquiry for American bicycles is also increasing, and there are now about sixty in use here; they are considered superior to all others. United States flour is used largely in the Yangtze Valley, as well as all kinds of American canned goods, hams, bacon, cheese, California fruits, etc. An American firm has been located here in the last month, and will do a general export and import business.

In regard to the importation of agricultural machinery, nothing can be done at present; but Professor Brill, of Cornell University, New York, has just arrived at Wuchang for the purpose of establishing a model farm under the auspices of the viceroy, and he will endeavor to introduce the latest agricultural machinery here.

American clocks and lamps are the only ones in use here, the native stores being filled with them. United States axes are coming into general use. Boots and shoes are manufactured by native workmen at less than one-half the cost of the imported article, but they are not so good and are badly finished. The same may be said of clothing. As a general thing, hides and skins are exported, and the leather used here imported, mainly from Europe.

I think that China will shortly become a vast field for American mercantile enterprise, as the goods manufactured in the United States are generally popular.

It would be impossible to give a correct report in regard to the fluctuation of silver, the currency in vogue in this country being based on the Mexican dollar, which has vacillated about 20 per cent since January 1. As a general thing, the Mexican dollar passes locally two for one United States gold dollar. The common coin of the country is the "cash," now quoted at 850 for a Mexican dollar. Owing to the fluctuation in silver, considerable confusion has been created in exchange, especially in large business transactions.

This being an inland port, there are no harbor rates or tariff dues paid by American importers, all being paid in Shanghai; freights are also adjudicated there. The time en route from here to the United States, including stoppages at Shanghai and other ports, will average fifty days; with no detention, about forty days. A daily line of steamers runs from Shanghai to Hankow. The boats are excellent, and make the trip in four days; passage costs \$40 (Mexican). There has been no increase or decrease in freight rates during this year, but as the Japanese propose to put on a line of steamers early next year, a freight war may ensue. As regards commercial travelers, no restrictions whatever are thrown in their way. Armed with a passport, they can go anywhere within the Empire of China with impunity, nothing being contraband but opium, firearms, and gunpowder.

Regarding the railroad proposed to be built from Hankow to Peking, but little is known definitely. The routes have been gone over, but no permanent survey made. From here to the hills, 14 miles distant, a trestle will have to be built above the high-water mark, in many places 50 feet in height. Boats are now unloading stone for that purpose. In the valley of the Yellow River, on the route, the engineers anticipate much trouble in bridging that stream, and it will require skillful engineering to cross the mountains that lie along the line. Most of the country en route is magnificent and susceptible of a high state of cultivation. At places extensive coal fields can easily be developed, and all that is needed for that purpose is a railway to carry the carbon off, as it can be mined at a small outlay. The iron works at Hanyang, under the charge of an American expert, have demonstrated the fact that rails can be made out of Chinese iron and coke at an output of 130 per day (30-foot 850-pound rails).

As a general thing, business here has been sluggish, the only excitement being the purchase of tea, which did not command as high a price as it did last year, the quality being not so good and it being reported that the American market was overstocked.

NIUCHWANG.

Niuchwang, while a comparatively small city of but 60,000 population, is of especial importance to the United States as a treaty port. It is located at the extreme north of the Gulf of Pechili, considerably farther north than Tientsin, and is of especial importance to the United States because of the demand for goods from this country in that section. American cottons, American oil, and American manufactures generally are in great demand in the province of Shingking, of which Niuchwang is the treaty port and most important city, and goods reach the interior by the Muren River, which is navigable nearly to the northern border of the province. The proposed Russian railway line, which is projected through Manchuria and the province of Shingking to the port of Port Arthur, passes near Niuchwang and is to be connected by a short line. Another line, to be built by British capital, will connect Niuchwang with Shanhaikwan, which is already in railway connection with Peking, the capital of the Empire. The demand for American goods at this treaty port and the country adjacent to it is shown by the following extract from the report of Walter Lay, commissioner of customs at that point, written in January, 1898, and covering the commerce of Niuchwang during the year 1897:

The rapidity with which English drills have been disappearing may be seen by noting that the importation only four years ago amounted to 80,000 pieces, while during the period under review only 3,000 pieces arrived. The predominant position secured by American drills and sheetings, referred to in past reports, is now one of sheer supremacy. The value of these two items aggregates 3,125,000 haikwan taels—that is, not far short of the half gross value of all foreign arrivals coastwise. Cotton yarn did not recede from the advanced position assumed in the previous year, for the falling off of the Indian yarn was neutralized by the increase in Japanese yarn. The inelastic character of the trade in woolen goods continues. As to metals, while most of the items have declined, the gross quantity compares very favorably with that of 1896. The loss in nail-rod iron and horseshoes was compensated for by the gain in old iron plates and scraps. The most striking feature in the category of sundries is the overwhelming importation of kerosene oil, in which trade the supremacy of the American brands is exceedingly pronounced, for the large importation of 526,000 gallons in 1896 has been eclipsed by the 2,041,000 gallons to the credit of the period under review. While the growing popularity of kerosene oil is undoubted, the extreme dearth of bean oil throughout the season was the principal factor in determining the remarkable development in question. * * * The net value of the imports, which is practically the same as the large figure of the previous year, may be considered fairly to represent a volume of trade equivalent to that year. With reference to the leading articles, native cloth, medicines, silk piece goods, green tea, and prepared tobacco have gained, while raw cotton, paper, and sugar have lost. Cotton yarn, manufactured by Chinese steam cotton mills, advanced from 30 piculs, valued at 600 haikwan taels, to 4,560 piculs, valued at 77,888 haikwan taels.

CHUNGKING.

Chungking, which lies nearly 2,000 miles inland, is, despite its interior position, one of the most important of the more recently opened ports of China. Located at practically the head of navigation on the Yangtze, it is the chief city of the largest, most populous, and perhaps the most productive province of China, whose relative position, industries, population, and diversified products make it quite similar to the great productive valley of the upper Mississippi. The province of Szechuan is the largest province of China, having an area of 166,800 square miles, and a population of 67,000,000, or but little less than that of the entire United States. Its area and density of population may be more readily recognized in the fact that its size is about the same as that of the States of Ohio, Indiana, Illinois, and Kentucky combined, but that its population is six times as great as that of those States. Its productions include wheat, tobacco, buckwheat, hemp, maize, millet, barley, sugar cane, cotton, and silk. Mines of coal and iron, and springs of petroleum, and native manufacturing establishments are operated, but upon a small scale and supplying but a small proportion of the goods required by the large population. Chungking was opened as a treaty port in March, 1891, in which year the imports amounted to 1,371,027 haikwan taels. By 1887 they had reached 4,574,298 haikwan taels, and in 1897 they amounted to 8,444,081 haikwan taels. American drills, of which the importations in 1895 were 5,115 pieces, were in 1897 10,651 pieces. Imports of American kerosene, which in 1895 were 12,700 gallons, had by 1897 reached 75,780 gallons.

On the importance of the trade of this port and the business openings of the section of which it is the center, Consul Smithers, in a report to the State Department in October, 1897, says that the prospect of introducing American goods, other than kerosene oil and a few piece goods, is not, in his opinion, bright as to the immediate future, but adds:

The richness of the province is undisputed, and if the natural resources, which to a great extent still lie dormant, could only be properly developed, the people would be enriched to a great extent. As it is, they must content themselves with products of their own district that they can buy at a less figure than imported articles.

The existing conditions of transportation facilities, either by land or by water, between Ichang, the treaty port on the Yangtze, 450 miles below Chungking, are very imperfect. Reliance must be had upon water on native craft, which are tracked up the river the entire distance when the wind does not permit the hoisting of a sail. A large junk takes sixty days to make the up trip, whereas a light-draft steamer could do it in one-tenth the time, allowing for all likely delays. In my opinion, the navigation of the upper Yangtze by steam is worth looking after by some enterprising steamship company in the United States. The right to run steamers on this section of the river has been secured by the Shimonoseki, Japan, treaty, concluded in 1895, but no company has yet tried the experiment.

AMOI.

Amoy, a port located on the coast of China directly opposite the island of Formosa, is especially important in its relations to the prospective trade of the United States with China. Fuh-kien, the province in which Amoy is located, while the smallest of the provinces of China—its area being less than that of the State of Ohio—has a population of 23,000,000, or more than six times as much as that of Ohio. Consul Johnson, in a report to the State Department on the trade of Amoy, says:

Amoy's trade with the United States leads that of all other Chinese ports. America took no less than about \$3,731,597.15 (gold) worth of tea from this port alone during 1896, as against about \$2,574,919.20 (gold) worth for 1895. (The rate for Mexican dollars was 52.3 cents for 1896 and 55 cents for 1895, being the mean average for each year.)

In exports the United States was the principal customer, while of the imports she supplied a very insignificant per cent. According to the system in vogue of handling our goods in this market, they are, with one or two exceptions, all classed as English goods, to the great injury of United States farmers and manufacturers. There simply are no statistics of the imports from America available except those of kerosene oil, which comes direct to Amoy by sailing vessels. Even for that, this office is dependent upon the report of the Chinese customs. The bulk of the trade passes through Hongkong, an English colony, where the cargoes are landed and reexported to Chinese ports, and the goods are classed as English goods, and are so regarded by the merchants and consumers. This is particularly true of United States canned goods, bacon, hams, oat flake, etc. In case of kerosene, there is a noted exception. If one should give America credit for all the kerosene sold as our native product, our showing would be most gratifying. The record for 1896 shows an increase over 1895 of 120,000 gallons in case oils. There is a heavy falling off in the receipts of Russian oils. It is claimed that United States tins, after being emptied, are frequently filled with an inferior foreign oil, which is sold as American oil. Faulty cases or tins sometimes afford an excuse for the dealer tampering with the United States product as delivered and a corresponding facility in perpetrating the fraud.

Cotton piece goods of all kinds exhibit an increase, especially in white shirtings, Turkey reds, lawns, and Japanese cotton cloth and crape. Formosa has afforded a steady market for many kinds of cotton goods locally manufactured from Bombay spinnings. These importations for 1896 amounted to 65,990 piculs, or 8,776,670 pounds, a gain over 1895 of 15,242 piculs, or 2,027,186 pounds.

With the present low price of cotton in the United States and the thousands of idle spindles, it would seem that a fair proportion of these spinnings might be supplied from the United States.

It is important in this connection to note that American cotton fabrics are preferred by the Chinese, and they buy them when possible to obtain them, even though they are sold at a much higher price than other importations. The wealthy Chinese would buy nothing else if they could secure the goods readily.

There are many evidences of increased prosperity among the native population, chief among which is the increase in importations of table luxuries, such as *bêche de mer*, birds' nests, sharks' fins, etc. It is possible to account for much of this by the fact that many native merchants who have spent a few years in the Straits Settlements and Manila have accumulated fortunes and returned to their native land to live in luxury. Many others, dissatisfied with the Japanese rule in Formosa and apprehensive of the results, have come to Amoy and bought the finest foreign houses on the little island of Kulangsoo, which commanded fabulous prices, and have settled down among the foreigners.

There is an increasing market for United States flour. The fields formerly used for the cultivation of various grains, rice, and vegetables are now largely given to the growth of the poppy. As a result, the staple article of food must come from abroad.

American flour can be imported at such a low figure, quality considered, that it is more economical than the native flour, which is prepared by a somewhat wasteful process. United States flour is slowly penetrating into the interior, though it is not making the progress one would like to see. Wheat goes begging for a market in the United States, when right here, in this one country, might be found a market for millions of bushels annually. The great corn fields of the interior Western States could also find here a market for much of the surplus product.

Corn flour is used to a limited extent, and should receive the attention of the importer. It is both cheap and wholesome, two qualities essential to enable a product to gain a foothold in the Flowery Kingdom.

CHEFOO.

Chefoo is considered an especially important treaty port by reason of the constant and growing demand for American goods at that point. It is located on the Gulf of Pechili, comparatively near to Tientsin, but nearer to the new British port of Wei-hai-wei, and its importance to American interests is pictured by Consul Fowler in a report to the State Department recently published, in which he says:

It is satisfactory to see that during the six months under review the following American goods show a gain over the same period of 1896:

Drills	pieces..	13,214
Sheetings.....	do....	111,040
Oil, kerosene.....	gallons..	942,050

It is worthy of note that of the 36 classes of foreign merchandise showing a gain in the table of imports 27 are imported from gold-standard countries and only 9 are from Asia or silver-standard countries; this in spite of the enhanced values due to the tremendous fall in silver.

Of the 22 classes of foreign merchandise that show a decline 8 are imports from gold-standard countries and 14 from silver-standard countries.

The above tables, unfortunately, do not show the exact state of affairs, as immense quantities of merchandise come into this district overland from Shanghai on the south and Tientsin on the north. Moreover, the first six months of the year show the smallest returns, as during January and February there is but little coast traffic on account of the entrance to the harbors of Tientsin and Newchwang being frozen. Chefoo is then the terminus of the run.

Imports of the principal American merchandise at Chefoo for 1892, 1894, and 1896.

	1892.	1894.	1896.
Drills, Americanpieces..	64,215	45,025	106,326
Jeans, Americando....	2,290	1,220	2,500
Sheetings, American.....do....	198,235	108,647	217,560
Flour, American (gold value)		\$7,794.83	\$10,596.55
Oil, kerosene, American.....gallons..	1,056,580	1,833,790	2,388,250

This table shows that while the value of silver is rapidly declining and thus enhancing the cost of United States goods, the imports of our merchandise have increased by leaps and bounds. On the other hand, the imports of similar goods from England have decreased.

English goods imported in 1892, 1894, and 1896.

	1892.	1894.	1896.
Drills, Englishpieces ..	31,750	19,215	18,570
Jeans, Englishdo....	3,056	5,720	4,850
Sheetings, English.....do....	76,331	44,510	61,363
Yarn, cotton.....pounds..	206,656	117,466	156,500

The first importation of Russian kerosene oil was in 1895 610,000 gallons; in 1896 it had fallen to 243,000, while our oil had increased from 1,967,900 gallons imported in 1895 to 2,388,250 gallons in 1896, and even this increase would have been greater but for the unfortunate loss of the ship *Governor Goodwin* in August of that year, bound for Chefoo with oil.

The imports of our oil for the six months ended June 30, 1897, were 1,642,100 gallons, a gain of 942,050 gallons over the same period of the previous year and 585,020 gallons more than the importation for the whole year of 1892. This tremendous increase will be shortly added to by the arrival of two ships shortly due from New York with oil.

The customs returns do not show, nor is it possible for us to ascertain exactly, the state of our trade with Chefoo, for, excepting in the articles named above, the returns do not specify their origin; but a glance in the shops reveals immense quantities of American food stuffs, notions and small wares, canned fruits, vegetables, biscuits, clocks, watches, small machinery, and stoves of American origin, for which the demand is very rapidly increasing. There is one store here that makes a specialty of our goods, and singularly enough, while it keeps the freshest and best goods, coming from the much nearer port of San Francisco, it is the cheapest store in the town.

The Chinese are rapidly acquiring a taste for our canned goods, milk especially. In Shanghai alone there were imported in 1896 41,500 dozen tins of milk. In fact there is no better market anywhere for our exports than China.

OTHER PORTS.

A group of ports recently opened in the southern part of China is the subject of considerable attention because of the effort of French interests to open a market for their manufactures by way of their possessions Tonkin and Annam, in close proximity to southern China. These ports are Lungchow, Mengtsz, Chinwang, and Pakhoi. Already a railroad is constructed from the head of navigation on the Red River in Tonkin to the border of China, and other lines are projected thence to these various ports and to a number of other cities, including Nanning and Laokai, with which the French expect to establish trade relations. In some particulars the French are especially successful in their commercial relations with China, they having accomplished more in their efforts to abolish likin taxes at way stations through the country by payment of a transit pass rate of duty than has been the case with other nations, though the further fact that a higher rate of duty is levied on goods imported into Tonkin and Annam places them at a disadvantage as compared with countries whose goods enter at the other ports of China where a rate of duty of but 5 per cent is collected.

On the coast between Canton and Shanghai are located the treaty ports of Swatow, Foochau, Wenchow, Ningpo, Hangchow, and Amoy, already named. Three of these, Hangchow, Ningpo, and Wenchow, are to be connected with Shanghai by a proposed railway line to be built under British control. North of Shanghai there are few treaty ports, the only ones aside from Tientsin and Ninchwang, already described, being Chefoo, on the Gulf of Pechili and immediately adjacent to the new British port of Weihaiwei. In the Yangtze Valley are several smaller treaty ports not already mentioned, among them Wusung, Suchow, Chinkiang, Nanking, Wuhu, Kukiang, Yochow, Shasi, and Ichang, the latter having been formerly considered the head of navigation on the Yangtze.

In the dependency of Tibet is Yatung, a treaty port opened in 1893 under somewhat peculiar circumstances. Yatung is almost due north from Calcutta in British India, and foreign goods reach it only by packs carried upon the backs of men or animals. A railway runs north from Calcutta to the foot of the Himalayas, where the traveler

changes to a narrow-gauge line which carries him in eight hours 50 miles through magnificent scenery to an elevation of 7,400 feet, the railway being pronounced one of the most interesting feats of engineering in the world. From the terminus of the railway—Darjeeling—to Yatung, although the distance is little over 80 miles, the trip requires seven days, and all goods are carried by men or pack animals. The buildings at Yatung consist of a house for an officer who may be appointed by the Indian Government to reside there, a cluster of rude hovels for the accommodation of traders, two Tibetan houses, and accommodations for the commissioner of customs, though no customs duties are to be collected during the first five years of its existence as a treaty port. In the first year of its operation no less than 29,186 loads, carried by men or pack animals, arrived and departed from this point, while in 1897 the number of loads by men and pack animals was 64,477. The articles brought into Yatung in this manner included 1,391,652 yards of cotton goods, 58,196 yards of woolen cloth, 10,299 yards of woolen and cotton mixtures, 10,458 yards of silk, 5,470 umbrellas, 40,000 “maunds” of sheep’s wool, 4,821 maunds of maize, 1,717 gross of matches, and 3,386 maunds of metal. The commissioner of customs reports that in 1897 an increased demand existed for blue piece goods, Japanese and Nepalese cottons, printed and fancy cottons, white and dyed yarn, cotton thread, cambrics (of which 654,890 yards were imported), and white and dyed drills. Among the metals and metal work most in request were ironware, tin plates, tinware, copper sheets, copper ware, German silver in sheets, and pewter, while satisfactory increases occurred in beads, dyes, incense, indigo, mirrors, kerosene oil, silk, sugar, candy, tobacco, and umbrellas.

POPULATION AND AREA.

That China’s population is one-fourth that of the world and her area one-twelfth that of the land surface of the globe is too well known to require repetition here. That her area is 60 per cent of that of the United States and her population five times as much as that of the United States is also well known. It is practicable, however, to obtain a clearer view of the relative size and density of population of her various provinces by a comparison with States in our own country. The table which follows gives the area and population of each province of China, comparing them with those of States in the United States. This, with the aid of the map given herewith, will make it practicable for those so desiring to determine the relative size of each province and compare its density of population with that of the various sections of the United States.

COMPARISON OF AREA AND POPULATION OF CHINESE PROVINCES WITH STATES OF THE UNITED STATES.

CHINA'S RELATION WITH THE WEST.

ADDRESS OF THE CHINESE MINISTER, HIS EXCELLENCY, WU TING-FANG, AT THE ANNUAL SESSION OF THE AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE, ON APRIL 8, 1899.

We have all read about the dispute between two ancient knights over a shield, one claiming it to be gold and the other claiming it to be silver. The story is an old one, but the lesson it teaches is worth remembering. It is the failure to look at the other side of the shield that has given rise to all the misunderstanding in the intercourse between the East and the West. The different nations in the West have, within the present century, advanced so much in science, knowledge, and wealth that it has become the fashion to speak of them as the most civilized nations on the face of the earth, and to consider the nations in the East as much below them in civilization—in fact, as barbarous or semicivilized. It has been too much the habit to ignore the good points the Eastern nations possess, and to leave out of account what they have done. This is hardly just. The East also has a civilization of its own. Of that civilization China is the chief exponent. Among its achievements may be mentioned the invention of the mariners' compass, gunpowder, and printing. It is not a civilization of mushroom growth. There is not a nation standing to-day that can trace its history as far back as China. She has witnessed the rise and fall of the ancient Egyptian dynasties; the expansion of the Persian Empire; the conquests of Alexander; the irresistible advance of the Roman legion; the deluge of Teutonic hordes from the North; the dissolution of the empire of Charlemagne, and the birth of all the modern nations of Europe. During the forty centuries of her existence there have gradually grown up institutions and laws adapted to the needs and character of the people; a literature as extensive and varied as that of ancient and modern Europe; a system of morality that can challenge comparison with any the world has ever produced; and those useful arts that have never ceased to excite the wonder and admiration of the world. You may ask why Egypt, Persia, Greece, and even mighty Rome have successively succumbed to the ravages of time, while China alone has survived. The answer is not far to seek. It is the survival of the fittest. The working of this inexorable law of nature constantly weeds out those nations that can not adapt themselves to the ever-changing conditions of life, and the fact that China is standing to-day shows conclusively that she has not outlived her usefulness to the cause of civilization.

Thus Chinese civilization has been weighed in the balance of time and not found wanting. But the conditions that have fostered that civilization have in recent years been greatly modified by steam and electricity. With the Himalayas on the west, vast deserts on the north, and large bodies of water on the east and south, China was a country extremely difficult to approach from all sides in days not very long ago. There she was left for centuries to work out her destiny practically free from outside influence and foreign molestation. But the steamboat and the telegraph have changed the whole situation of things, and rendered it impossible for her to lead such a national life as she could before. It has taken her some time to awake to this fact. On this account she has been called an unprogressive nation. This sentiment is voiced by Tennyson when he says, "Better fifty years of Europe than a cycle of Cathay."

But it is a mistake to think that China has been stationary. Compare China of the present day with China of fifty years ago, and the progress she has made will be at once apparent. There is a well-known law in physics that when a body is at rest or in motion it will remain at rest or continue to move in a straight line unless acted upon by some outside force. This law holds good in the political as well as in the physical world. It is unreasonable to expect China to break away from the long-established sway of custom in a moment. The inertia of centuries must be first overcome. The meeting of the Chinese and Western civilizations is a meeting of two social forces. We must look for the result not in the complete neutralization of one force by the other, but in the union of the two forces. It is the recovery from the shock of the collision that requires time. After the union of the forces is effected, movement in the resultant direction may be expected to be rapid.

Mechanics also teaches us that if the same force acts for the same period of time upon bodies of different masses, the velocity generated is inversely proportional to their masses. According to this law, when two balls, one weighing twice as much as the other, are thrown from the hand, the heavier one will go only half as far as the other. Now the population of the United States is estimated at 76,000,000, and the population of China is estimated at from 350,000,000 to 400,000,000, or about five times as large. We should expect, therefore, that a social or political movement which would stir up the whole people of the United States would, other conditions being equal, produce only one-fifth as much effect upon the people of China. But in order to obtain the same effect in China as in the United States the force must be five times as great; or, if the force be the same, the time it is allowed to act must be five times as long. Thus for the apparently slow progress of the Chinese nation we have a scientific explanation.

Though China may not have made very rapid progress from a western point of view in times past, there are signs everywhere at the present day indicative of a general awakening among the people. We have already established a system of telegraphs which is now in operation in every province of China, and a message can be sent from 1,000 miles in the interior to the furthest seaport in a few hours. With regard to the railroad, it was introduced in the north of China fourteen years ago, and I had the honor of being one of the promoters and directors that organized the first company. Since then it has been extended in different directions. A journey from Tientsin to Peking, which by boat would have taken three or four days a few years ago, can be accomplished now in a few hours. The grand trunk line from north to south is being now rapidly pushed forward and in the near future a traveler from the extreme south of China will be able to go up by the "iron horse" to Peking in forty-eight hours. So is the case with water communication. We have steamers plying along the coast of China, and steamboats of light draft are seen on most of the navigable rivers.

It will be tedious to enumerate all the new improvements that have been introduced within the last twenty or thirty years, but from what I have above indicated it is sufficient to show that China has not been napping. I do not say that all necessary reforms have been made, and I frankly admit that something more will have to be done. Our government and people are aware of this, and they are taking steps in that direction, but it should be remembered that it is not necessary to import by wholesale the Western civilization into China. What is suited in one country may not be suited in another. Wise statesmen do not rush forward to introduce new measures without serious consideration lest their introduction may cause disruption and harm not counterpoised by the good produced.

You have so many conflicting stories about China and the Chinese nowadays that I must admit it is a difficult matter for anybody to distinguish what is true from what is false. Every globe trotter upon his return home generally has something to say about China, and is ever ready to give his impressions of the country and its people. A rocky hill may have the appearance of a sand dune on the

outside. A passing observer is apt to mistake the one for the other. In order to find out the true character of the elevation we must dig down below the surface. The same may be said of China. The words of a globe trotter must be taken *cum grano salis* with reference to all things Chinese.

The spirit of commercialism has lately risen to a dangerous pitch. As a market for the world's goods China indisputably holds the first place, for the wants of 350,000,000 to 400,000,000 people have to be supplied in some way. It has been said that as a market one province in China is worth more than the whole continent of Africa. It has always been the policy of China to treat all foreign nations alike. They are all most-favored nations in a literal sense. The maintenance of an "open door" is exactly in the line of her policy. But unhappily human nature is never contented. When a man gets an inch he wants an ell. It is now the turn of missionaries to tell us that if there were no foreign adventurers in China there would be no foreign complications. Twenty-five centuries ago our sage Confucius, the greatest philosopher that ever flourished in China, said, "Wealth gotten by improper ways will take its departure by the same." This is equivalent to your proverb, "Goods ill-gotten go ill-spent." Nations as well as individuals should not forget this, as the maxim of Confucius as well as your proverb will always come true if any nation or individual should unjustly obtain possession of any property. Some people call themselves highly civilized, and stigmatize others as uncivilized. What is civilization? Does it mean solely the possession of superior force and ample supply of offensive and defensive weapons? I take it to mean something more. I understand that a civilized nation should respect the rights of another nation, just the same as in society a man is bound to respect the rights of his neighbor. Civilization, as I understand it, does not teach people to ignore the rights of others, nor does it approve the seizure of another's property against his will. It would be a sorry spectacle if such a glaring breach of the fundamental rights of man could be committed with impunity at the end of this nineteenth century. What would the future historian say when he should come to write about the events of this century? Is it not time that we should at least recognize the principle of righteousness, justice, and fair play?

Mencius, a great philosopher of China, twenty-three centuries ago said thus: "I like life and I also like righteousness; but if I can not keep the two together I will let life go and choose righteousness. Now, if people professing Christianity and priding themselves on being highly civilized should still so far misconduct themselves as to disregard the rights of the weak and inexcusably take what does not belong to them, then it would be better not to become so civilized. It would be better to live amongst the people who practice the tenets of Confucius and Mencius than amongst a people who profess to believe in the highest standard of morality but do not practice what they believe. The aphorism of Tennyson should be changed so as to read: "Better fifty years in Cathay than a cycle in Europe."

But I do not believe such practice of ignoring other people's rights is generally resorted to, and I am persuaded there are many people who denounce it. China welcomes to her shores the people of all nations. Her ports are open to all, and she treats all alike, without distinction of race, color, nationality, or creed. Her people trade with all foreigners. In return she wishes only to be treated in the same way. She wants peace—to be let alone—and not to be molested with unreasonable demands. Is this unfair? She asks you to treat her in the same way as you would like to be treated. Surely this reasonable request can not be refused. We are about to enter into the twentieth century, and are we to go back to the Middle Ages and witness again the scenes enacted in that period? I can not bring myself to think that the world is deteriorating. I believe that in every country there are men and women of noble character—and I know in this country there are many such—whose principle is to be fair and just to all, especially to the weak, and that they would not themselves nor allow their respective governments to commit acts of oppression and tyranny. It is such men and women that shed luster on their respective countries. It is due to the noble and unselfish efforts of such good people that the scheme of a tribunal for the settlement of international disputes has been brought prominently before the world. May their grand scheme soon be carried into effect! The good such an institution will produce to the world will be manifold. All international disputes will then be settled in an amicable way without resort to arms and without bloodshed. There will be practically no more war. The blessings of peace will be permanent. Commerce and trade will be more steady and prosperous, and merchants will have more confidence in each other. All men will follow their respective avocations uninterruptedly. Nations will be brought into closer touch with each other, and their friendly relations will be more cordial.

These and many other beneficial results will, in my humble opinion, naturally follow from the establishment of an international court of arbitration. It is gratifying to hear that the project of a general disarmament, so nobly proposed by His Majesty the Czar of Russia and so readily seconded by the leading nations of the world, will soon lead to a conference. May it bear good fruit! May it be the precursor of an international court of arbitration! This is my earnest wish and I am sure it is your wish and the wish of every man and woman who has the peace and well-being of the world at heart.

THE UNITED STATES AND THE TRADE OF CHINA.

[From *China in Transformation*, 1898, by Archibald Colquhoun.]

The United States are deeply concerned in the China question, both from the industrial and political point of view. Already compelled by the force of circumstances to embark on a foreign policy and to look increasingly to foreign markets, they can not but feel that the question is of vital importance to themselves. It is evident that the Pacific Slope, though at present playing but a small part, is more closely concerned in the ultimate development of China than any other section of the States. These Pacific States are possessed of enormous natural resources; their manufactures, while of minor importance, have quadrupled in twenty years, and will in the course of time find a most advantageous market in the far east. When the Nicaragua Canal is made, the Atlantic States also will be brought into close connection with China and the whole of the far east. The volume of the United States trade with China represented more than one-seventh of the entire trade of the Empire in 1896. While the import trade of the United States from China has increased slowly, the export trade to China has increased 126 per cent in ten years and is over 50 per cent larger than the German exports. The exports of cotton cloths amounted to 1,497,000 pounds sterling in 1897, or nearly one-half the entire value of cotton cloths sent abroad by the United States. The export of kerosene oil from the States to China now ranks second in importance to that of cotton goods, and is likely to increase at a rapid rate. The Chinese demand is quickly growing, and the export from the United States to China has more than trebled in the past ten years. The Russian oil has hitherto been the only serious competitor, but Langkat is coming rapidly into use. The exports of wheat from the United States fully reached a value in 1897 of 678,000 pounds sterling, and chemicals, dyes, etc., 200,000 pounds sterling. The United States export to China chiefly cotton and mineral oils. And while England, which so far practically controls the China trade, has most to lose by the partition of China, even should she receive a large share, the United States are deeply concerned in the question, for their trade is considerable and of great promise.

FIRST OFFICIAL COMMUNICATION BETWEEN THE UNITED STATES AND CHINA.

[President Tyler to Chinese Emperor, 1843.]

I, John Tyler, President of the United States of America—which States are Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, Vermont, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Kentucky, Tennessee, Ohio, Louisiana, Indiana, Mississippi, Illinois, Alabama, Missouri, Arkansas, and Michigan—send you this letter of peace and friendship, signed by my own hand.

I hope your health is good. China is a great Empire, extending over a great part of the world. The Chinese are numerous. You have millions and millions of subjects. The twenty-six United States are as large as China, though our people are not so numerous. The rising sun looks upon the great mountains and great rivers of China. When he sets he looks upon rivers and mountains equally large in the United States. Our territories extend from one great ocean to the other; and on the west we are divided from your dominions only by the sea. Leaving the mouth of one of our great rivers and going constantly toward the setting sun we sail to Japan and to the Yellow Sea.

Now, my words are that the governments of two such great countries should be at peace. It is proper, and according to the will of heaven, that they should respect each other and act wisely. I therefore send to your court Caleb Cushing, one of the wise and learned men of this country. On his first arrival in China he will inquire for your health. He has strict orders to go to your great city of Peking and there to deliver this letter. He will have with him secretaries and interpreters.

The Chinese love to trade with our people and to sell them tea and silk, for which our people pay silver, and sometimes other articles. But if the Chinese and the Americans will trade there should be rules, so that they shall not break your laws or our laws. Our minister, Caleb Cushing, is authorized to make a treaty to regulate trade. Let it be just. Let there be no unfair advantage on either side. Let the people trade not only at Canton, but also at Amoy, Ningpo, Shanghai, Fuchau, and all such other places as may offer profitable exchanges both to China and the United States, provided they do not break your laws nor our laws. We shall not take the part of evildoers. We shall not uphold them that break your laws. Therefore, we doubt not that you will be pleased that our messenger of peace, with this letter in his hand, shall come to Peking, and there deliver it; and that your great officers will, by your order, make a treaty with him to regulate affairs of trade, so that nothing may happen to disturb the peace between China and America. Let the treaty be signed by your own imperial hand. It shall be signed by mine, by the authority of our great council, the Senate.

And so may your health be good and may peace reign.

Written at Washington, this twelfth of July, in the year of our Lord one thousand eight hundred and forty-three.

Your good friend,

JOHN TYLER,
President.

THE ENGLISH LANGUAGE IN THE FAR EAST.

[Lord Curzon in "Problems in the Far East," 1894.]

The improvement of existing and the creation of new means of communication are rapidly developing a solidarity between the East and the West which our grandparents would have deemed impossible. Fusion, and not disintegration, will be the keynote of the progress of the coming century. There remains now but few countries to which access has not already been gained, * * * * * and this task will be facilitated by the increasing diffusion of the English tongue. Already spoken in every store from Yokohama to Rangoon, already taught in the military and naval colleges of China and in the schools of Japan and of Siam, already employed in the telegraphic service of Japan, China, and Corea, and stamped upon the silver coins that issue from the mints of Osaka and Canton, already used by Chinamen themselves as a means of communication between subjects of different provinces of their mighty Empire, it is destined with absolute certainty to be the language of the far east. Its sound will go out into all lands and its words unto the ends of the world.

RAILWAYS IN CHINA.—A FRENCH AND ENGLISH VIEW OF THEIR ACTUAL OPERATION.

An interesting letter from M. Leroy Beaulien, dealing with the question of the construction of railways in China, has recently appeared in the *Economiste Francaise*. He gives an account of Tientsin, the capital of Pechili, which ranks third in importance among the open ports of China, its trade consisting chiefly of goat and sheep skins from Mongolia and camels' hair from the same place, the staple articles of export from China (tea and silk) not being produced in this rigorous climate; and he points out that the opening of the railway on the one hand toward the northeast, where coal deposits are to be found, and on the other toward Peking must undoubtedly improve the commercial condition of Tientsin.

The first city in the interior which the Chinese decided to connect with the coast by railway was the capital, and the railway system of the province of Pechili is still the only one existing in the Empire. It consists of 290 miles open for traffic—a length of 79 miles from Peking to Tientsin; 27 miles from Tientsin to Tangkou, a little above the forts of Takou, which protect the mouth of the Peiho; 144 miles from Tangkou to Shanhaikwan, a point where the great wall of China touches upon the sea; and, finally, an extension of 40 miles beyond this great wall toward the northeast. If the Tientsin-Shanhaikwan Railway had been pushed with more activity from the coast, it would, according to M. Beaulien, have been in a position to render the most invaluable services during the Chino-Japanese war. It is proposed to prolong it as far as Moukden, in Manchuria, with a branch to Newchwang, the open port of Pechili, which was occupied by the Japanese in 1895. The work, however, is advancing very slowly from the coast, while on the other hand the line from Tientsin to Peking was constructed in twelve months.

Upon all the lines the traffic is well managed. There are four trains a day each way between Tientsin and Tangkou, two from Tangkou to Shanhaikwan, and since the 1st of October last two from Tientsin to Peking. The receipts from the line from Peking to Tientsin average 3,000 taels a day (about £400 at the rate of exchange ruling at the date of M. Beaulien's communication, namely, the

8th of October last). The construction is well carried out, the ordinary European gauge being adopted. The technical difficulties which had to be overcome were not great, although, the district through which it runs being periodically inundated, it was necessary to exercise great care and judgment in building the line. The Peiho and one or two other water courses are crossed by means of bridges on stone piles which are not yet entirely finished. The railway, which belongs to the Chinese Government, has been built by English and American engineers, and these still direct the technical working, while the engine drivers are all Europeans. The rest of the staff employed on the permanent way and at the various stations and that forming the financial administration is composed of Chinese. The carriages are not luxurious, but are sufficiently comfortable for a short journey. Many of the Chinese travel in the goods trucks. As regards luggage, which may be carried by Europeans in reasonable quantities, this is usually piled into the carriage with the passengers. The fares are moderate. Passengers alight from the carriages a few hundred yards from the walls of Pekin, amidst a crowd of spectators who are attracted by the novelty of the sight.

M. Beaulieu goes on to say that certain members of the Tsung-li Yamèn still protest against the construction of railways, chiefly on religious grounds; but notwithstanding the opposition it appears certain that China must construct further railways. That from Tientsin to Shanhaikwan ought to be extended to a point in the neighborhood of Kirin, in Manchuria, when it would meet the line that the Russians are going to build; but this moves very slowly, the Chinese probably not being anxious to place their capital into direct communication with Russia. There are other lines under consideration, notably one from Pekin to Hankau, on the Yang-tse-Kiang, and one starting from Shanghai, while European engineers are studying a line from Pekin toward the southwest, the terminal point of which would be Tai Yuen, principal town of Shansi, about 279 miles from the capital.

RAILWAYS IN CHINA—FUTURE PROSPECTS.

The following extract is made from the report upon the trade of China for 1896, prepared by Mr. Grosvenor, of the British legation at Pekin:

"The year 1896 has witnessed a real advance in the direction of opening up the country by means of railways. The line connecting Tientsin with the capital had, at the close of the year, been completed to within 30 miles of Pekin, and at the present moment trains are running to within half an hour's ride of the city gate.

"A beginning has already been made by the construction of the line from Pekin to Lu Kou Chiao, a distance of some 16 English miles, this being the first stage of the railway which is to connect the capital with the Yangtze port of Hankau. Shêng Taotai, to whom the arrangements for the construction of the Pekin-Hankau line have been intrusted by the Chinese Government, is endeavoring to raise the necessary capital, which will unquestionably have to be drawn from a foreign source, as the Chinese have proved to be unable or unwilling to subscribe it.

"The development of the country by means of railways can have none but beneficial results upon foreign commerce with China; but the adoption of particular western methods, such as the telegraph, has not hitherto been attended by any revolution in the attitude of the Chinese toward western ideas or modes of thought, and in the absence of other indications it would be easy to exaggerate the importance of the movement in favor of railways as a sign of general progress in this direction.

"Rapid changes are inconsistent with the Chinese character, and a year is a short space in the life of a nation whose civilization has remained stationary for twenty centuries; but during the year under review evidences, such as increased friendliness to foreigners on the part of the educated classes and eager competition among the officials for foreign posts, have not been wanting to show that China is beginning to assume a better attitude toward the ideas and institutions of the West. Progress is slow and almost imperceptible, but progress there is, and it is possible that the new ideas, having once gained admittance, may act with cumulative force on the philosophic apathy of the mercantile and moneyed classes and on the unreasoning conservatism of the masses, so that public opinion may be led to demand an administration more capable and less corrupt, a less irrational fiscal system, and more adequate means of communication; and the chief bars to progress being thus removed, a rich field for commercial and industrial activity may be opened up in this Empire at a date less distant than could be hoped from its present condition. Englishmen should watch carefully the development of events, remembering that the great rewards of enterprise will be to those who are first in the field."

ELECTRIC RAILWAYS IN SHANGHAI.

[From Consular Reports, 1898.]

Consul-General Goodnow, of Shanghai, under date of July 9, 1898, says:

I inclose a clipping from the published report of the proceedings of the city council with reference to the proposed street railway in Shanghai. This plan contemplates about 18 miles of railway of the overhead wire and trolley system. It appears to me that our electric railway builders should bid for this concession. The extract reads:

"The report of the special commission is again under discussion, and it is decided to include in the particulars both systems of gauge ('standard' and 'meter').

"The following general particulars are ordered for publication:

"The electric overhead trolley system is to be adopted.

"The routes are to be three in number, viz:

"(1) From the French waterworks along the Chinese Bund (if practicable), and thence along the French and English Bunds to the point by way of Broadway, Seward, and Yangtzepoo roads.

"(2) From the Bund to the Bubbling Well by way of the Kinkiang, Kiangse, Hankau, and Nankin roads.

"(3) From the Shanghai station of the Woosung-Shanghai Railway to the west gate of the Chinese city.

"A concession is to be given for the construction of the line and all accessories to a syndicate or company, to be known as the 'Shanghai Tramway Company.' The concession is to be for thirty, forty, or fifty years, according to the tender that the ratepayers may decide to accept, and the company is to pay the council a percentage of the total gross receipts for the period of the concession.

"Notification to tenderers by public advertisement will follow in due course, and the tender finally selected will be submitted to the ratepayers for ratification."

TELEPHONE AND TRAMWAY SYSTEMS IN SHANGHAI.

(From Advance Sheets Consular Reports, 1899.)

In reply to an editor of a New York publication, Consul-General Goodnow, of Shanghai, writes as follows under date of November 17:

The council of the city of Shanghai is now advertising for proposals for telephone and electric-railway systems. The specifications can be seen at the council's agency in New York City, or copies can be obtained from the city engineer here for 25 taels each (a Shanghai tael is equivalent to about 65 cents gold). Bids on the telephone franchise must be in by March 31, 1899, while bids for the tramway franchise must be in by March 15, 1899.

Shanghai lies on the west bank of the Whangpoo River, about 12 miles from the Yangtze River. The city extends about 3 miles along the river and from half a mile to 1 mile back from it. It is densely populated, principally by Chinese, the estimated population being over 300 per acre. Negotiations are in progress between the Chinese authorities and the English, French, and American consuls-general, whereby it is hoped that such an extension of the settlements will be made that the city will be enlarged to more than three times its present area. The present settlements, three in number, were originally ceded (1845) to the American, English, and French Governments for the residences for their citizens, the land being held by the separate owners on perpetual lease from the Emperor. The American and English settlements are in one municipality, governed by a council elected annually by the ratepayers. The French settlement is governed by a council elected by the ratepayers of that settlement. Actions brought against the municipality are tried by a court of consuls, now consisting of the American, English, and German consuls-general. In all suits against individuals or companies the defendant is entitled to trial before the court of his own nationality and under its laws. The municipal police and other local regulations are recognized as law by the various consuls. So thoroughly is this a cosmopolitan city that any changes in its regulations must be approved by the entire consular body and the diplomatic body at Peking before they become operative.

The city is almost perfectly flat and the average height above high water is about 2 feet. The soil is alluvial. The yearly rainfall is 44.24 inches. The highest temperature ever observed was 102.5° F. in the shade, and the minimum 10.5° F. Coolie labor is paid about 25 cents Mexican per day; but this can not be compared with the white labor of the United States for efficiency.

From the foregoing it will be seen that a contractor for city work must deal with the council of the Anglo-American settlement with that of the French settlement, and with the Chinese authorities for any franchise which is to include all Shanghai and the surrounding country. This fact, and the additional one that the foreigners are divided from the Chinese and from one another by racial and national antagonisms, will make it difficult to obtain any franchise covering the entire city. But the necessities of the case may force the granting of the two franchises in question. There are about 5,650 foreigners in the settlements and 410,000 Chinese. There are 200,000 Chinese in the suburbs. The city's income is about 730,000 taels (\$474,500), and its debt is 1,131,800 taels (\$735,670).

The telephone company in Shanghai operates 338 telephones, charging an annual rental of from 60 to 70 taels. The instruments are of the oldest style and the service is not good; but, as is usual when a company is already in possession, it will have an advantage in the coming competition, knowing the local conditions and the people. The council proposes to give a thirty years' exclusive franchise, reserving an option to purchase after fifteen years. It requires a deposit of 10,000 taels (about \$6,500) with the bid as an evidence of good faith. If good telephones could be furnished at a reasonable rental, I believe that many times the present number would be used, for the Chinese seem very partial to electrical appliances. In the matter of cost the telephone has a sharp competitor in the cheap labor of the country. A coolie can be hired to carry chits (letters) for \$5 Mexican (\$2.37 gold) per month. With a poor telephone service the coolie is more reliable and much less wearing on the temper than is the wire. Probably nine-tenths of the messages are carried by coolies at the present time.

The tramway problem is a much more complex one. It is proposed to give a franchise for thirty, forty, or fifty years; but the tender accepted by the council must afterwards be ratified by the ratepayers. The specifications fix a maximum first-class fare of 10 Mexican cents and a maximum second-class fare of 5 Mexican cents for transporting passengers from one point to another on the lines. A deposit of £10,000 is required with the bid as an evidence of good faith. About 23 miles of track are to be laid at once. An overhead-trolley system, supported by iron poles, is asked for, as it is not thought an underground system is practicable where the water stands so near the surface of the ground. The streets along which the proposed roads are to run are macadamized with broken granite on a foundation of broken brick. There are twelve small bridges which will have to be strengthened.

The details of construction and operation are largely matters of experiment, as there has been no rapid transit in this country; and they should be carefully studied by experts on the ground. An American gets little realizing sense of conditions here by what is written. Everything is so foreign to his ways, ideas, and manners that only the evidence of his eyes will convey a clear conception.

Since the Japan-China war Shanghai has rapidly developed into a manufacturing as well as a distributing center. Rents and values of real estates have trebled, but wages and profits have not increased proportionally. The immediate need is for means by which the suburban territory can be brought within reach of the business center. Present methods of locomotion are too slow and expensive to enable the clerk with an average salary to live beyond walking distance from his work. The population here is sufficient to support a tramway system, and the congested condition of the present city will force people to build at once along the proposed lines of railway extension.

At present the ordinary conveyance is the two-wheeled jinrikisha, of which there are about 7,000 now in use in this city, drawn by coolies. The fare is 15 cents Mexican per hour. The passenger is carried directly to his destination and landed at the curb or doorstep, instead of in the middle of a possibly muddy street.

The streets of Shanghai are, generally speaking, both narrow and crooked. The Chinese have a habit of walking in the middle of the street, in sublime indifference to everything and everybody. They are as curious as children, and will want to discover what there is in the wire to make the car go. How much difficulty will be occasioned by these peculiarities will be learned only after experiment.

While a tramway franchise here, on proper terms, will undoubtedly be remunerative, I can not too much emphasize the necessity of study and care in bidding. The conditions here are new to our people. The people of Shanghai know nothing of the essential elements of electric transportation. Only an expert, after a careful study of the situation on the ground, can make an intelligent bid.

CHINA'S RAILWAYS IN 1899.

[From "China's Present and Prospective Railways," by Clarence Carey, New York, 1899.]

In actualities in Chinese railway affairs we first encounter a short line of some 14 miles, opened in 1876 between Shanghai and its deep-water or below-bar port of Woosung. After a brief existence of but little more than a year, which even under adverse conditions of local superstition and native official protest gave ample promise of success for its British promoters, this tentative line was presently bought up by the local authorities and summarily removed.

That an unfortunate first step of this kind was destined to be followed twenty years later by the creation of the railway since constructed between the same termini, and that the project in its regenerated form has on its recent opening been received with the unqualified approval and acclaim of the native population, is a significant fact.

A beginning of railway development is here, as elsewhere, visible within the Empire, which demonstrates that some of the light of Western progress may penetrate the fog of conservatism heretofore persistently obstructing all such innovations.

The Woosung-Shanghai line, however, need not be reckoned as the only effective result thus far shown. Thanks to the untiring efforts of Mr. G. E. Kinder, an English engineer, who for the last twenty years has labored under many discouragements and against manifold obstacles in the field of China's development, the Taku, Tientsin, Shanhaikuan section of the Imperial Railway system has likewise been perfected. Begun in a furtive manner in 1881 as a mere tramway of a few miles in length to serve the Kaiping coal mines near Tong-Shan, this equally modest venture has been gradually prolonged both north and south of that point until it reaches Tientsin and Taku on the one hand and Shanhaikuan on the other.

A continuation of this road is partially graded north of Shan-hai-kuan, and it is this unfinished section, together with a further projected extension to Niuchwang, which has of late so prominently figured in British and Russian controversy.

We shall have occasion to revert to this subject presently; it may for the moment suffice to observe that another more important extension of the general Chinese Imperial Railway system has also been recently completed under Mr. Kinder's capable direction from Tientsin to Machiapu—a point about 2 miles from the Tartar part of the city of Peking—whence a short electric railway connection, extending to one of the principal gates of the Chinese capital, is already constructed.

The Tientsin-Peking branch of the main railway affords an illustration, if not indeed a conclusive proof, that profitable results may certainly be obtained by any judiciously planned railway in the Chinese Empire. From the earliest days of its opening during the past year this road has been constantly overburdened with freight and passenger traffic, and is believed to have repaid ample profit. As connecting the capital city of Peking with its important seaport of Tientsin, the line should long enjoy like and increasing advantages.

Another scarcely less important section of the Imperial Railway is found in a line of about 80 miles in length, extending from Lukouchiao (or Lukou Bridge) near Peking, southward to Pao-ting-fu, the capital of the Province of Chihili. This latest venture, which, for the moment, completes the present achievement of the Government system, has been under active construction for somewhat more than a year past, and is now in partial operation to a point near Chocho, a little north of Paotingfu. Whether as prospectively a part of the Hankau-Peking, or "Lu Han" Railway—to be presently described—or because of certain lien rights therein, supposed to be possessed by the Russo-Chinese Bank, this section is of particular interest, for the bank here mentioned is an important politico-financial institution through which Russia operates in China, and the funds for building not only this line, but a projected extension of the same further south to Chengtingfu, are believed to have been advanced by it.

That such a possibility could exist has been the cause of much British anxiety and protest, and in this quarter it is confidently believed that behind what here purports to be merely a native railway operation will sooner or later appear an aggressive Muscovite hand grasping at the sacred British reservation of the Yangtze region.

So, too, it is suspected that certain projected Belgian railway operations in respect of a connecting road from Hankau on the Yangtze River, northward to Paotingfu, likewise disguises secret Russian intent. British apprehension is still excited on both of these points, but has been recently diverted to that more acute stage of the perennial Anglo-Russian friction which normally exists in North China. What is there the subject of immediate dispute is a proposed extension of the Imperial Chinese Railway from Shanhaikuan, some 260 miles northward to Niuchwang, a project to which we have before referred and must presently return.

As already indicated the existing Imperial Chinese system consists, thus far, of not more than about 340 miles of railway now in operation, viz: The lines from Tientsin to Shanhaikuan, via Tangku, and from Tientsin to Machiapu, near one of the gates of Peking, together with the Woosung-Shanghai road, and a small affair of about 20 miles in length which serves the Tien-shan-pu coal mines on the upper Yangtze River.

To these initial railways, however, must presently be added the road already mentioned, of about 80 miles in length, now under construction from Lukouchiao (bridge) near Peking, southwardly to Pao-ting-fu, with later the projected extension from Shan-hai-kuan northwardly to Niuchwang, and perhaps the more ambitious project generally known as the Lu Han Line, if matters improve for the Belgian contractors who now are fumbling with this latter enterprise.

Next in order should be the undertaking of the American China Development Company with the construction of the Hankau-Canton Railroad, and there are various minor schemes of like nature, chiefly as additions to the imperial system to follow.

The Lu-Han road, if completed, will result in an important trunk line of about 650 miles in length, extending from the prominent interior treaty port of Hankau—the highest point of deep-draft navigation of the Yangtze Kiang—northwardly to Pao-ting-fu, where it will join and later absorb the partially completed section, reaching thence north to Lu-kou-chiao, near Peking, which has already been described.

It is worth remark that this, the Lukouchiao-Hankau Railway, takes its more familiar or sub-title of "Lu-Han," from what appears to be a Chinese custom of linking together parts of the names of the termini of a proposed route, and is thus generally designated in local reports and press dispatches, although also popularly known as the "Belgian concession."

This important project, which was at first the object of much futile native undertaking, was later, for a considerable period, the subject of active negotiation between the Chinese officials and an American group which had been invited to undertake its construction and, as well, to provide a loan of the necessary funds for this purpose. When, however, the representatives of the American company visited China in the winter of 1896-97, in response to native invitation, and for the purpose of consummating a supposed contract for the road, they soon found that the concession thus afforded to them was of little or no commercial avail.

His Excellency Sheng Hsüan-huai, or, as he is more commonly styled, Sheng Tajen, the Chinese official who, as director-general of the Imperial Chinese Railway Administration, acted for the Imperial Government in these negotiations, able, astute, and progressive as

he is, had not then sufficient experience in western railway requirements to make the business, as he sought to shape it, a possibility of the time.

After securing a survey of the line thus proposed, under the direction of Capt. Watson W. Rich, an experienced American engineer, who has since obtained the important post of chief engineering adviser of the Imperial Chinese Railway Administration of the South, the American party finally declined the proposed contract, preferring to wait for further developments and for the more promising opportunities which seemed probable, and, indeed, have since arisen.

That the Lu Han contract thus rejected by the Americans was presently thereafter snapped up by a less prudent Belgian group or syndicate is well known, as also that the latter have experienced many unhappy moments over their undertaking, with which, indeed they are still struggling.

In a previous article on this general subject the writer ventured to predict that the adventurous Belgians would here inevitably stumble, if not wholly fall by the wayside, in the effort to carry out a wholly inadequate contract. Subsequent events have thus far justified this forecast, and demonstrated their undertaking to have been fruitful of vexation and delay, both to themselves and to the Chinese, as also, thus far, without material result in the way of railroad construction. This, notwithstanding sundry radical changes of contract, since obtained under the amended Chino-Belgian agreement of June 26, 1898.

In the various negotiations of 1896-97, here under consideration, the Chinese officials deemed it expedient to limit their dealings to those of the various foreign nationalities, who, like Belgians or Americans, might reasonably be supposed to have no schemes of territorial grab or aggrandizement hidden up their sleeves. China has since then, however, been forced into granting many railway, and other concessions, whether to Russians, French, or Germans, and it is perhaps a necessary consequence of these conditions that she seems to be now more openhanded in like transactions with the British.

Leaving the Belgians, for the present, to their arduous undertaking, we pass in proper sequence to the American project, and to what seems destined to become another chief north-and-south trunk line of the future railway system of China.

This is a proposed road from Wuchang, on the south bank of the Yangtze opposite Hankau, extending southward to Canton, via the chief intervening provincial capitals, with various cross lines or branches and a possible extension from Canton to the vicinity of Hongkong.

The contract affecting this considerable railway, including a promise of sundry mining rights and other collateral privileges, has recently been granted to the American China Development Company, already mentioned, a corporation which is promoted by a syndicate of prominent American capitalists, whose business character, experience, and financial standing are such as to reasonably insure the carrying out of whatever project they may finally undertake.

The Hankau-Canton franchise, thus concerned, has long been an object of solicitous consideration on the part of concession seekers of all nationalities, for here may readily be discerned a possible railway of the future, which, with branch lines traversing and amply serving the southern half of China, would not only create and control a great traffic, but as well dominate whatever minor railways there might be established in its vicinity.

That the contract for the same has now been readily granted to the American company is due not only to the fact that, in the course of its negotiations in China during the past three years, the latter has gained the confidence of the native officials, but, as well, because the rapidly increasing political complications with which the Empire has lately been affected have convinced the Imperial Government of the need of railways for its preservation. We have already seen that in dealing with Americans the Chinese deem themselves free from menace of territorial aggression, and, in this instance, what was particularly sought to be gained by them is the barrier an American railway undertaking in the southern provinces will afford against aggressions of the French from the south.

A glance at the accompanying map of China will demonstrate that the proposed Hankau-Canton road must cross or reach the fertile, well developed, and densely populated provinces of Hupeh, Hunan, Kiangsi, Kwangsi, and Kwangtung, and that, incidentally, it may likewise serve their various provincial capitals with suitable cross lines for tributary traffic, as also develop the valuable deposits of coal and other minerals which some of these provinces are known to afford.

The American undertaking of the Hankau-Canton railway, with its branches and cross lines, is still in the stage of preliminary physical investigation. An engineering party, under the charge of Mr. William Barclay Parsons, of New York, has recently begun an elaborate survey of the route, which, it is expected, will require from four to five months for its completion. At present, it would appear, although definite information is still beyond our reach, that the projected line will encounter no great physical obstacles in the way of river crossings or mountain ranges, nor any lasting obstruction arising from unsettled political conditions. The Yangtze, at least, unlike its more formidable northern neighbor, the Yellow River, which the Belgian Lu Han system will have to meet and overcome, may be crossed at all seasons by means of a train-ferry service of an effective kind.

The remaining railway projects of the Middle Kingdom, other than those already averted to, although few in number, are yet well worthy of consideration.

Taking these in their order, we may first turn to the proposed line between Tientsin and Chingkiang, a scheme of unquestioned importance and prospective value, which many foreigners have sought to control. This, with good reason, for the line here concerned, as following that of the Grand Canal, is generally level and easy of access for the supply of water-borne railway building material, and in occupying a great north-and-south trade route which the natives have used for centuries past, is reasonably sure, whenever constructed, to command a great and lasting traffic.

There is still a confused clamor of both native and foreign applicants for this concession. A native company, largely identified with Mr. Yung Wing, a well-known Americanized Chinese, appears to have obtained from the Tsung li Yamèn a preliminary grant of it, but at the same time to have run counter to a rival Anglo-German project which, as actively patronized by the governments of these strong outside nationalities, seems thus far likely to gain the more effective right of way.

In this region lies one of the chief debatable grounds of the Empire. Already what only a year ago purported to be merely a tentative German occupation of the adjacent port of Kiaochau has since, with the usual mushroom growth of such aggressions, so rapidly extended as to embrace a large "Hinterland," and, as it now appears, any railway invasion of other nationalities within or near the western borders of the extended Shantung province, is wholly inconsistent with Teutonic views. But, although these conditions obtain, and there are various exclusively German railway lines projected throughout Shantung, it still seems that in respect of the Tientsin-Chingkiang line the Germans have found it expedient to compromise with the rival British project which has threatened to cross the border of their sphere.

The British, ever alert and in the front rank of the advance of business enterprises in the Orient, as elsewhere, have thus far embarked upon the Niuchwang extension before referred to, and have obtained a mortgage lien upon the important line between Tientsin and Peking, as also entered into their prospective joint-purse arrangement with the Germans in respect of the last-mentioned railway project between Tientsin and Chingkiang.

That they do not pause here may be expected, and thus we find the well-known English firm of Jardine, Mathieson & Co. to have also secured a valuable concession for a line to extend from Shanghai via Soochau to Nanking, and northwestward toward the Lu Han line, over a route running generally west from the sea and connecting some of the most important trade centers which lie along or near the southern bank of the Yangtze. Another English group, known as the British-Chinese Corporation, is said to have secured a concession covering the route from Soochau via Hangchow to Ningpo, while a still more recent important British movement is reported in the latest China dispatches in the shape of a concession which appears to have been obtained by the Anglo-Chinese Railway Syndicate, of London, for a railway extending from Canton westwardly to Chengtufu, the capital of the province of Szechuan.

This latest road is designed to cross the Yangtze at its junction with the Min River, near Suifu, and that it may ultimately somewhere meet a projected extension of the Burma Railway system, before alluded to, adds to its interest; for such a line, as, in effect, affording a possible connection for the Burmese system with Hongkong, would be of the highest consequence.

A railway from Bahmo for this purpose has long been planned and desired, if only as a means to effectually protect the British sphere in the western Yangtze region; but of late the better opinion seems to be that the physical difficulties such a line would encounter between Bahmo and the southwestern Chinese provinces are almost prohibitory. Mr. Colquhoun, in his recent work, cited above, points out that this railway connection from Burma will be made via the Kuolon Ferry, on the Salween River, near the southwest corner of Yunnan.

In this regard, a late cable dispatch, to the effect that the French Government have decided to approve a loan by Indo-China of 200,000,000 francs for railway extensions, is of great significance; since, as is well known, the French colonial officials, for a long time past, have been aiming their Tong King railway system toward Yunnanfu, in the Chinese province of Yunnan, within the territory thus concerned. It is, indeed, no secret that French railway projectors are keen to thus reach and control the trade of Szechuan, as also that they will not lament if, by so doing, a possible British railway advance from Burma toward this important section of China may thus be even partially headed off.

Following the always wise policy of taking half a loaf, where otherwise there may be no bread, the British, as we have seen, have combined with the Germans in respect of the Tientsin-Chingkiang line, in the disputed territory above referred to. They have also since shared in what is popularly known as the "Luzzati Concession," an important Italian-English project, lately brought out on the London stock market under the title of the Peking Syndicate, Limited, with an effective "boom." This concession is concerned with the development of vast coal and iron deposits of the Shansi and Honan provinces, for which, and the appropriate railway outlets to a navigable tributary of the Yangtze, and also to the Lu Han line, ample contract rights seem to have been duly obtained from the Imperial Government.

A further franchise, of no less importance, it may be remarked, appears to have been recently granted to W. Pritchard Morgan, M. P., for working the mineral deposits of the province of Szechuan, one of the largest and richest districts of western China.

As to other railway projects of the various foreign nationalities in China, these, although yet but few in number, now seem to promise an early and plentiful crop, since a great and growing pressure for concessions exists at the present time in Peking. The Russo-Chinese Bank appears to have contracted to construct a line of 140 miles from Taiyuanfu, the capital of the Shansi province, to Chengtingfu, in the province of Chihili, a large city south of Paotingfu on the Lu Han line. This, although not in itself an extensive railroad project, has attracted attention, as seeming to involve another Russian encroachment within the British Yangtze sphere. Other contracts are from day to day reported, and Russian and English interests are competing for the concession covering a further line to Kalgan in the north, over a route long used for a great caravan trade. As we have seen, the Germans have many railway schemes developed within their Shangtung Hinterland.

So much for the actual or projected lines of railway thus far created or discussed in China.

RAILWAY AND MINING CONCESSIONS BY THE CHINESE GOVERNMENT.

[Report to State Department by Consul Ragsdale; from Consular Reports, 1898.]

I have the honor to report the first concession ever granted by the Imperial Chinese Government to a foreign syndicate, by the terms of which foreigners have the right to open and work mines, construct and operate railways, and all entirely free from Chinese control other than the payment of a royalty and conformity with the general laws of the Empire as applicable to foreigners.

On the 21st day of May, 1898, there were signed, in the presence of the ministers of the Tsung-li Yamén, articles of agreement which ceded to the Pekin Syndicate, Limited, of London, the sole right to open and work the coal and iron deposits of central and southern Shansi and the petroleum deposits of the entire province; also, the right to construct and operate all necessary railways to main trunk lines and navigable waters for exporting the mining products.

The agreement was signed by order of imperial edict, stamped with the seal of the Tsung-li Yamén as a visible sign of imperial sanction and authority, and the whole proceedings were verified and ratified by the British and Italian ministers to China.

The signing of this contract marks the most important epoch in the industrial policy of China. The precedent has been established of allowing foreigners, for commercial purposes, to own real estate in the interior of China, open and operate mines, and construct and maintain railways.

There have been many so-called mining concessions granted in China, but not one of them is worth the paper it is written on.

Of the railway concessions, only one—the Belgian Syndicate for the Pekin-Hankau Railway—has gotten beyond the preliminary stage, and in none is the syndicate more than the financial agent of the Chinese. These railway syndicates have no voice in the management and not too much security for their money. As a matter of fact, up to date neither the Belgian Syndicate nor any other syndicate has furnished one cent of money.

The following is a synopsis of the articles of agreement between the Pekin Syndicate and the Chinese Government:

The right to open and work coal and iron deposits in certain (named) districts in the province of Shansi, and the sole right to all petroleum—these rights to exist for sixty years—are granted.

Private lands are to be purchased, and on government lands the syndicate is to pay double the present land tax.

All matters of administration, exploitation, management of employees, and finances shall be controlled by the board of directors of the Pekin Syndicate. Each mine is to have foreign managers and one Chinaman to arrange disputes with natives. All accounts are to be kept by foreign methods, but audited annually by a native of China. All salaries are to be paid by the Pekin Syndicate, and all receipts and payments shall be controlled by foreigners.

All damage done private property in prospecting is to be paid for; cemeteries and mortuary shrines are not to be disturbed.

The Chinese Government is to receive 5 per cent producer's tax on the actual cost of extracting coal, iron, or other material. The syndicate is to receive 6 per cent interest on the capital of the company, and 10 per cent shall be set aside as a sinking fund with which to repay the capital. Of the balance net profit the Chinese Government is to receive 25 per cent and the Pekin Syndicate 75 per cent. All future coal or iron mines worked with foreign capital shall pay the 5 per cent producer's tax.

The Chinese Government is not to be held responsible for losses.

All important machinery and material shall pay $1\frac{1}{2}$ per cent the regular maritime customs dues, but no likin taxes. Mining products exported from a seaport shall pay regular export duty.

At the expiration of sixty years all machinery, plant, buildings, mines, railways, etc., revert gratis to the Chinese Government.

The syndicate shall establish a school of civil engineering and mining for about twenty Chinese students.

Chinese may buy shares in the company. (The Imperial Chinese Government has reserved £250,000 worth of shares, for which it pays cash the par value.)

When Chinese own 75 per cent of the shares of any one mine they may redeem the balance from the syndicate and operate the mine. Private mines now in operation may continue to work or sell out to the syndicate.

The syndicate has the right to build all necessary roads and bridges, open or deepen canals or rivers, and construct all railways to connect mines with main trunk railways or navigable waters.

In case China goes to war the syndicate will obey the orders of the Chinese Government prohibiting aid to the enemy.

The Pekin Syndicate is composed of a few men who control immense capital and who have obtained the most valuable concessions China could make. The preliminary work has been in progress for over two years. The concessions will be worked by the Anglo-Italian Syndicate, with a capital of £6,000,000.

The success of this enterprise is due, first, to the fact that the syndicate was willing to spend money upon the chance of getting a concession, and that, after sending their general agent to China, they simply allowed him to manage affairs here and kept him supplied with money. Then the agent, Mr. A. Luzzatti, has shown wonderful tact in dealing with Chinese officials, judgment in selecting his assistants and in utilizing all available means to success, and untiring perseverance.

The province of Shansi lies to the west of Chihli. It consists of an interior plateau of 3,000 feet elevation, more or less cut up by rivers. This plateau is bounded on all sides by mountains rising to 8,000 and 14,000 feet above the sea. In some places these ranges have been cut through by rivers; but in all parts they are rugged, and transportation must be effected by pack mules or camels. In the eastern portion of the province, and running into the province of Honan, are deposits of anthracite coal. The western half has bituminous coal covering some 12,000 square miles, and all along the western boundary are deposits of petroleum. At many different points in the coal region are deposits of rich iron ore.

The coal strata are practically horizontal, and at an elevation of about 2,500 feet. They show wherever erosion has cut to a sufficient depth. This anthracite-coal vein is unbroken over an area of 13,500 square miles, and its thickness varies from 25 to 50 feet, an average of 40 feet. All of this deposit is within the limits of the concession. There are thousands of native coal mines now in operation, and the coal has been used for probably three thousand years. The iron ore is now worked by the natives. This entire region has been examined by William H. Shockley, mining engineer, and Charles D. Jameson, civil engineer, both Americans and in the employ of the syndicate.

There is probably no coal field known in the world that can compare with this of Shansi, either in quality or quantity of coal or the possibility of cheap production. In addition to the concession in Shansi, there was signed on the 21st of June an identical agreement ceding to the Pekin Syndicate all of that portion of Honan north of the Yellow River (about 10,000 square miles), and another agreement by the terms of which all of the mountainous part of Honan south of the Yellow River is ceded to the syndicate as soon as work is begun on the Shansi concession. The total area of these concessions is 71,000 square miles, equal to England and Scotland. The accompanying map *a* shows the area of the concession and the proposed railway.

REGULATIONS FOR MINES AND RAILWAYS IN CHINA.

[From Advance Sheets, Consular Reports, 1899.]

Minister Conger sends from Pekin, under date of December 6, 1898, translation of the regulations prepared by the bureau of control for mines and railways, with a view to protecting and encouraging honest promoters, as follows:

(1) There are three ways in which railways and mines can be managed—by officials, by merchants, and by the two in combination. The second is the best and will be encouraged and promoted by the Government as much as possible in the future. The officials should do all in their power to encourage such enterprises, but will not be allowed to conduct them themselves.

(2) All such enterprises for which contracts have not been completed before the establishment of the Government board must be sent up to the Throne for sanction, but from the date of the establishment of the said board they will be subject to the regulations of the board. Enterprises which have been previously arranged will not be allowed to form precedents.

(3) The mines and railways of Manchuria, Shantung, and Lungchou are affected by international relations and therefore will not be allowed to form precedents either for Chinese or foreigners.

(4) Railways and mines are entirely separate affairs, and therefore must not be worked in combination. Railway agreements giving mining rights along the route will not be allowed to form precedents in future. In cases where permission is given to mining companies to construct branch railways to connect with water ways and for the purpose of carrying the produce of the mines, such lines must only be carried as far as the nearest water communication. Such railways must not carry passengers or cargo so as to interfere with the profits of other lines. Plans of such proposed railways must be submitted to the Government for approval.

(5) All mining and railway companies must provide a school of instruction, as already ordered by the Throne.

(6) When applications are made by Chinese gentry or merchants to the local officials for permission to engage in mining or railway enterprise, the said officials must inquire into the character and standing of the applicants, and if the latter are found to be reliable people and their applications are not in opposition to the regulations, they may be submitted to the Government board. The local

officials have no power to grant such applications. If such applications are made to the board direct, inquiries must be made through the officials of the applicants' district, and only such applications will be granted in which the report of the local authorities is of a favorable nature.

(7) When it is necessary to acquire land for mining and railway purposes, the people must be notified by the local authorities, and the former must not show wanton opposition. When land is so acquired, houses and graves must be respected so as not to offend the feelings of the people.

(8) All enterprises sanctioned by the board must be commenced within six months of the date of sanction; otherwise the sanction will be withdrawn, unless it can be shown that the delay was unavoidable.

(9) In all cases every endeavor must be made to have the Chinese proportion of the capital of such enterprise the greater. There must be a proportion of at least three-tenths of the shares owned by Chinese. When this proportion has been raised, foreigners may be invited to buy shares or foreign money may be borrowed. Sanction will not be given in cases where all the money employed is foreign.

(10) When it is proposed to borrow foreign money, the sanction of the board must first be asked. If such sanction is given, the loan must be regarded as being made by merchants and to be repaid by merchants—that is to say, the Chinese Government will accept no responsibility. If loans are concluded without the sanction of the board, they will not be recognized, even though an agreement has been signed.

(11) In case of foreign loans the preliminary agreements must be submitted to the board for their approval. If such agreements are contrary to these regulations, they will be sent back for amendment. In case they are not amended properly, negotiations may be entered into with other parties. Should foreign merchants enter into private contracts for loans and thereby suffer loss, the Tsung-li Yamén and the board will not help them recover their money.

(12) When Chinese companies are authorized to borrow foreign money, the board will advise the Tsung-li Yamén, which will communicate with the minister of the power concerned, who will reply, and their permission will then be considered to be given. When foreign merchants are desirous of lending money to Chinese companies, they must request their minister to communicate with the Tsung-li Yamén, who will ask the board if the company is authorized to borrow and will reply accordingly to the minister. Money lent in any other way will be treated as a private loan.

(13) In order to protect the sovereign rights of China, the control of all railways and mining companies, irrespective of the foreign capital concerned, must remain in the hands of the Chinese merchants; but the accounts of such companies must be open to the inspection of foreign shareholders.

(14) Promoters professing to have a certain amount of capital must show satisfactory proof of their assertion.

(15) The local authorities must in all cases encourage and protect mining and railway companies in carrying out their duly authorized enterprises.

(16) In case of disputes between companies or any interference with the rights of any company, the local authorities must decide the question fairly. Appeal may be made against their decisions to the Government board. Should disputes arise between Chinese and foreign merchants in connection with railway or mining enterprises, they must be settled by arbitration; the Governments concerned will not interfere.

(17) Foreign engineers and surveyors sent to inspect mines and railways must be protected by the local authorities.

(18) Rewards will be given to Chinese merchants investing 500,000 taels and upward in mining or railway enterprises, or doing extra good work in connection therewith.

(19) All such enterprises will be granted a monopoly for a fixed period, the duration of which will be determined by the circumstances of the case.

(20) Customs stations will be established on all railways for the levying of duties. The duties on mining produce and on the export of the same will be decided by the Government board in conjunction with the board of revenue, which will draw up regulations for submission to the Throne. The proportion of profits to be paid to the Government for railways will be four-tenths, and for mines 25 per cent, to be handed to the board of revenue.

(21) The affairs and accounts of each company will be examined from time to time by the Government board, either by having the books sent to the offices of the board or by deputing an officer to examine on the spot.

FOREIGN LOANS IN CHINA.

[From United States Consular Reports, April, 1899.]

The State Department has received from the Chinese legation, under date of Washington, January 17, 1899, translation of a dispatch from the Tsung-li Yamén at Peking, prescribing the necessary course to be pursued in contracting foreign loans for opening mines and constructing railroads in China. The legation requests that this be brought to the attention of American capitalists. The dispatch reads:

On the 4th day of the eleventh moon in the seventeenth year of Kwanghsu (December 4, 1891) this Yamén transmitted to the representatives of foreign powers at Peking copies of a joint memorial presented on the 24th day of the tenth moon in the seventeenth year of Kwanghsu (November 25, 1891), by the board of revenue and this Yamén, which provides that in the negotiation of a foreign loan by Chinese officials, of whatever rank, the agent for the interested foreign capitalists is required to report first to the representative of his country at Peking and ascertain from the Tsung-li Yamén whether the matter has been reported to and sanctioned by the Throne before making the loan; and that if a loan is made privately, notwithstanding the fact that there is no evidence of imperial sanction, the Government will neither recognize the claim nor undertake to compel restitution in case of trouble, though the official seal may have been affixed to the contract. On the 7th day of the eleventh moon (December 7, 1891) copies of the above-mentioned memorial were sent to the diplomatic representatives of China abroad, with the request that copies be communicated to the departments for foreign affairs of the respective countries to which they were accredited, in order that the same might be published for the information of foreign capitalists.

On the 24th day of the sixth moon in the twenty-fourth year of Kwanghsu (August 11, 1898) a memorial was presented to the Throne by the department of mining and railroads, reporting the establishment of that department at Peking and recommending that the various propositions started by officials and private individuals before the establishment of the department but not adopted should not be deemed as settled, and was duly approved by the Emperor.

Now, on the 28th day of the seventh moon (September 13, 1898) copy of a memorial to the Throne presented by Hu Yu-fan, governor of Peking, was received from the privy council, proposing that the Tsung-li Yamèn be commanded to inform all the diplomatic representatives of foreign powers at Peking, with the view of their notifying the capitalists of their respective countries, that all contracts for foreign loans entered into by the provincial authorities for the opening of mines and the construction of railroads without the written approval of the Imperial Government shall be deemed null and void, together with an imperial decree ordering the Tsung-li Yamèn to devise means for carrying the same into effect.

In view of the undeveloped state of the mineral resources of the various provinces of the Empire and the initial stage in the construction of trunk and branch lines of railroads, it has been this Yamèn's policy to allow foreign capital to be used for these purposes, to the end that both Chinese and foreigners may derive advantages therefrom. But, in order to obtain good results, affairs must be well managed and money must be economically expended. It is feared that there may be unscrupulous Chinese persons who, claiming with fraudulent intent to be concessionnaires of this road or that mine, may enter into private agreements with foreign capitalists for the purpose of obtaining money under false pretenses, and that foreign capitalists may become unwitting victims of such fraud and waste their substance to no purpose. This certainly is not the object of our Government in developing the resources of the Empire, by opening mines and constructing railroads for the mutual benefit of Chinese and foreigners. Now, this Government desires to give it the widest publicity that all contracts for foreign loans to be expended for the opening of mines and construction of railroads in China, in order to be valid, must be certified and approved by the department of mining and railroads, and that all agreements privately entered into with foreign capitalists without the certification and approval of the department, no matter how large the amount of subscribed capital may be, for the purpose of opening mines and constructing railroads, shall be deemed null and void, so as to put a stop to all fraud and deception and encourage fair and honest dealing. Copies of this communication have been transmitted to the diplomatic representatives of foreign powers at Peking, and you are requested to communicate a copy of the same to the Secretary of State for his information, and when you have received a reply, to send a copy to this Yamèn.

Dated this 12th day of the ninth moon in the twenty-fourth year of Kwanghsu (October 26, 1898).

(22) A detailed account of the affairs of the railway and mining companies at present in existence must be sent to the board for consideration. The board will also prepare forms for setting forth such details. These will be sent to all the provinces, and must be filled up at the end of each year by such companies and sent to the board for inspection.

The regulations, adds the minister, have received imperial approval.

Under date of December 10, 1898, Mr. Conger transmits translation of a report by the bureau of control for mines and railways, stating that no records are kept of rates of freight and fares for passengers on certain railways, on which the traffic is already considerable, nor is there any available information about the status of construction, number of trains, time-tables, etc. The Mo-ho gold mine and the Kaiping colliery, the report says, have been successful, yet the bureau has no detailed report of the output, etc. In the regulations for coal and iron mining in the provinces of Shansi and Honan, a Government tax of 5 per cent has been levied on the value of the mineral output. This rule, the report urges, should be followed with other mines. The bureau recommends that all companies organized but not officially approved before the date of the edict establishing the bureau shall be considered unauthorized.

OPENING OF THE INLAND WATERS OF CHINA TO STEAM NAVIGATION BY FOREIGNERS.

The following important announcement of the opening of the inland waters of China to steam navigation by foreigners was presented to United States Minister Denby in June, 1898, and recently published in the consular reports:

THE TSUNG-LI YAMÈN TO MR. DENBY.

PEKIN, June 3, 1898.

YOUR EXCELLENCY: The prince and ministers have the honor to state that ever since China entered into commercial relations with foreign powers steamers have been running at their pleasure to the coast and river treaty ports. The result is that trade has daily increased. Steamers, however, have hitherto never been permitted to run on the inland rivers.

Soochow and Hangchow have in recent years been opened as treaty ports, and native craft plying to and from these ports carrying passengers and merchandise have for the most part been towed by steamers. This is in every way a convenient and expeditious system. Both Chinese and foreign merchants have requested that companies be formed and vessels built to ply to various ports. It seems, therefore, right to do what is suitable for the occasion and make such changes as will redound to the utmost benefit of the interests concerned.

The Yamèn have now decided to allow small steamers, foreign or Chinese, to ply on the inland rivers in the provinces where commercial intercourse with foreign nations is carried on, in the hope that trade will thereby expand and the revenue be increased.

In obedience to instructions, the inspector-general of customs has drawn up and submitted a set of rules, nine in all, to be put in operation. These have been carefully examined and can be put in force experimentally.

The Yamèn memorialized the Emperor on the subject and received His Majesty's decree to put the rules into operation. The Yamèn have also addressed the ministers superintendent of northern and southern trade, the viceroys, governors, tartar-generals, lieutenant-generals, and have also instructed the inspector-general of customs, the custom taotais, and the superintendent of customs at Canton to act accordingly.

As in duty bound, the prince and ministers send a copy of the rules drawn up by the inspector-general of customs and beg that the minister of the United States will instruct the United States consuls in China to notify American merchants that they must duly observe them. It is to be hoped that in future the trade of Chinese and of foreigners will increase and that this source of revenue to China will not be interfered with.

INLAND STEAM NAVIGATION REGULATIONS OF 1898.

A.—Registration.

(1) The inland waters of the treaty-port provinces are hereby opened to small steamers, native or foreign, plying from treaty ports.

(2) Small steamers at treaty ports, whether plying only in the waters of the port or going thence inland, are to be registered at the customs and to take out papers at the customs containing owner's name and residence, name and type of steamer, number, crew, etc., in addition to whatever national papers they are allowed or required by law to carry. Such customs papers are to be renewed annually, and are to be surrendered on change of ownership or when the vessel ceases to ply. The fee for the first issue of customs papers will be 10 taels, and for each renewal 2 taels.

(3) Small steamers thus registered at the customs may ply freely in the waters of the port without reporting their movements at the customs; but if they go inland they must report both departure and return. No unregistered steamer will be allowed to proceed inland.

(4) As regards exhibition of lights, prevention of collision, shipping of crews, and inspection of machinery, etc., all such steamers are to observe the rules in force at the ports to which they belong.

B.—Revenue.

(5) Cargo shipped at treaty ports is to be reported to the customs and is to pay such duties as the customs decide to be leviable. Cargo brought to a treaty port from inland is to be summarily dealt with.

(6) Cargo landed or shipped inland is to pay at the place of landing or shipment whatever dues or duties the local regulations call for.

(7) If such steamers have vessels in tow, they must halt at whatever stations the vessels towed are required to stop, in order that the cargoes may be dealt with as local rules prescribe.

C.—Judicial.

(8) Offenses inland, whether against revenue laws or affecting persons or property, are to be dealt with by the local authorities of the district in the same way as if there committed by their own people; but if the vessel concerned is foreign owned or the person implicated is a Chinese employed on board such foreign-owned vessel, the local authorities are to communicate with the nearest commissioner of customs, and the commissioner in turn with the consul, who may send a deputy to watch the proceedings. If the offender is a foreigner, he is to be sent to the consul at the nearest treaty port, in the manner prescribed by treaties where foreigners without passports are arrested.

(9) If any such steamer passes inland stations where a stop should be made without stopping, or if the crew, etc., creates trouble inland, the customs may withdraw the customs papers and refuse the vessel permission to proceed inland again.

The above rules are for the inauguration of steam traffic on inland waters, and are subject to such changes as may from time to time be found necessary.

TRADE REGULATIONS ON THE YANGTZE-KIANG RIVER.

The Yangtze-Kiang being by far the most important river of China, and now open to trade for a distance of 2,000 miles, and penetrating the most densely populated and wealthiest sections of the Empire, the following new trade regulations, issued in May, 1898 (to take effect on approval of the foreign representatives at Peking), are published in full:

YANGTZE REGULATIONS.

ARTICLE 1. The revised regulations of trade on the Yangtze-Kiang (1862) having been amended and the substance of their provisions having been incorporated in the present Yangtze regulations, the said revised regulations of trade on the Yangtze-Kiang are hereby abrogated, together with the port and customs regulations thereon dependent.

ART. 2. The merchant vessels of the treaty powers are authorized to trade on the Yangtze-Kiang at the following treaty ports: Chinkiang, Nankin, Wuhu, Kiukiang, Hankau, Shasi, Ichang, and Chungking; and to land and ship goods in accordance with special regulations at the following nontreaty ports: Tatung and Ngan-King, in Ngan-hui; Hukow, in Kiangsi; Luchikow and Wusueh, in Hu-Kwang. Shipment or discharge of cargo at any other ports on the river is prohibited, and any violation of the prohibition will be dealt with in accordance with the treaty provisions applicable to clandestine trade along the coast; but passengers and their baggage may be landed and shipped at any of the regular passenger stations (at present consisting of Kiangyin and Iching, in Liang-Kiang; Hwangtsze Kang and Huang Chow, in Hu-Kwang). Passengers' baggage must not contain articles subject to duty, and the presence of dutiable articles will render the whole liable to confiscation.

ART. 3. Merchant vessels trading on the river are to be divided into three classes—

First class: Seagoing vessels trading for the voyage up river beyond Chinkiang.

Second class: Steamers running regularly between any of the river ports or between Shanghai and any river port.

Third class: Lorchas, papichos, junks, etc.

These three classes of vessels will be dealt with according to treaty and the rules for the various ports.

ART. 4. *Seagoing vessels.*—Seagoing vessels trading no farther up river than Chinkiang will be dealt with at Chinkiang in every respect like vessels trading at other coast ports, but seagoing vessels on a voyage farther up river than Chinkiang become thereby vessels trading on the river of the first class, set forth in the preceding article. Such merchantmen, whether steamers or sailing vessels, must deposit their registers with the consul, or, if there is no consular representative, with the custom-houses at Shanghai, Woosung,

or Chinkiang, which, on receipt of a consular application or on deposit of papers, will issue a certificate to the vessel, to be called a "special river pass," on which shall be entered the vessel's name, flag, registered tonnage, general cargo, and armament. The vessel may then proceed up river; and at whatever treaty ports she trades must report and clear, load and unload cargo, and pay dues and duties in the same manner as at other treaty ports along the coast. On return to the port that issued it—Chinkiang, Woosung, or Shanghai—the "special river pass" is to be surrendered to the customs, which, having ascertained that all dues and duties have been paid and all other conditions satisfied, will grant the clearance to enable the vessel to proceed to sea.

ART. 5. *River steamers.*—Any steamer intended to trade regularly on the river may deposit her register at the consulate at Shanghai, or, if without consular representative, at the custom-house, when the customs, on receipt of a consular application or on deposit of the register, will issue a certificate on which shall be entered the vessel's name, flag, registered tonnage, and armament, to be called a "river pass," that shall be valid during the current year. Such pass must be renewed every year, either at Shanghai or at Hankau or Ichang in the case of river steamers trading above those places and not returning to Shanghai.

River-pass steamers will report and clear, load and discharge, and pay dues and duties in accordance with the customs regulations of the port concerned. Their tonnage dues are to be paid at the ports which issue or renew the river pass (Shanghai, Hankau, or Ichang).

Infringement of river port regulations will be punished by the infliction of the penalties in force at the other treaty ports; for a second offense the river pass may be canceled and the steamer refused permission to trade thenceforward above Chinkiang.

Any steamer not provided with a river pass, if proceeding above Chinkiang, will come under the rule affecting seagoing vessels laid down in article 4, and will be treated accordingly.

ART. 6. *Cargo of river-pass steamers.*—The former regulations, which made it obligatory to deposit coast-trade duties simultaneously with paying export duties, having been abrogated, river-pass steamers will now pay duties in the same way as vessels at other treaty ports along the coast, that is, export duties at the port of departure before shipment of exports, and import or coast-trade duties at the port of discharge before release of imports; and similarly they will ship, transship, and discharge cargo after examination and issue of permit in the same way as vessels at treaty ports along the coast.

When tea is landed by a river-pass steamer, the consignee, instead of paying coast-trade duty, may deposit a bond for the amount. On proof of reshipment within a year the bond will be canceled. When reshipped tea is relanded at another port—e. g., reshipped at Hankau and relanded at Shanghai—a new bond will be required in lieu of coast-trade duty, to be canceled on reshipment, and so on.

ART. 7. *Small craft (lorchas, papichos, junks, etc.):*

(a) Lorchas, etc., owned by foreigners, if provided with registers and entitled to fly national flags, are required to take out a special river pass, either through the consulate or from the customs direct at Chinkiang, if proceeding farther up the river. They will report, work cargo, and pay duties like other seagoing special river-pass vessels.

(b) Papichos, etc., owned by foreigners, but not provided with registers or entitled to fly national flags, are to take out customs registers at the port they belong to and report, work cargo, and pay duties in the same way as lorchas, etc.

(c) Chinese junks chartered by foreigners are available only for conveying foreign-owned cargo from treaty ports to treaty ports. They must take out special junk papers at the customs, to be obtained in exchange for bonds executed at and deposited with the customs, the condition of the bond being that the cargoes are bona fide foreign property and will be landed and pay duty at a treaty port, the penalty being that if the cargoes fail to be so landed and pay duty, no chartered junk will thereafter be cleared for the foreigner in question. Such junks are to report, work cargo, and pay duties in the same way as lorchas and papichos.

ART. 8. *Cargo certificates.*—Special river-pass merchantmen, river-pass steamers, and lorchas, papichos, junks, etc., must apply to the customs at the port of departure for a cargo certificate (tsung tan), which, on the vessel's arrival at the port of destination, must be handed to the customs before permission to discharge can be given. The vessel will be responsible for the duties on all goods entered on the said cargo certificate and not landed on permit at the port of discharge.

ART. 9. *Miscellaneous.*—Any trading vessel falling in with a revenue cruiser or customs boat on the Yangtze-Kiang is to produce her papers for inspection, if examination of them is required. Vessels unprovided with proper papers will be dealt with under the treaty articles penalizing clandestine trade along the coast. The customs may seal the hatches of any vessel trading on the Yangtze-Kiang, and may place a customs officer on board to accompany her on the trip, whether up stream or down. Special river-pass vessels of the first class are not required to anchor to exhibit their papers at the intermediate ports passed and not traded at.

ART. 10. *Yangtze customs and port regulations.*—The adoption and promulgation of new regulations for vessels trading on the Yangtze having rendered meaningless sundry customs and port regulations which guided procedure under the former system, and having necessitated the substitution of fresh regulations and different practice under the system now introduced, the ports concerned (Shanghai, Chinkiang, Nankin, Wuhu, Kiukiang, Hankau, Shasi, Ichang, and Chungking) will proceed forthwith to arrange and publish new rules and regulations; and these are meant, on the one hand, to facilitate trade, and on the other to protect revenue and prevent smuggling.

The above regulations are open to revision when and if necessary.

TRANSPORTATION CHARGES IN CHINA.

[From advance sheets Consular Reports, 1899.]

In reply to an inquiry from the director of the Philadelphia Museums (to whom the original letter has been forwarded), Consul Smithers, of Chungking, writes, under date of October 29, 1898:

Foreign goods, on arrival from abroad at any seaport in China, pay duty in accordance with the treaty tariff, and are then forwarded to any treaty port without payment of further duties. Goods arriving in Shanghai are shipped on board steamers to Hankau and thence to Ichang, the present terminus of steam traffic of the Yangtze. From Ichang they are sent on native boats to Chungking. If goods are sent to the interior from here, half the import duty is levied and collected by the foreign customs, and the goods go to their destination under transit passes issued by the customs.

As to the expense of sending goods from the United States to China, this is no easy matter to estimate. To begin with, there is as yet no direct trade with foreign countries. The trade is with Shanghai or Hankau, and the expense of sending goods to Shanghai, I presume, can be learned in New York or San Francisco, as there are many lines of steamers from both cities to Shanghai. From

Shanghai to Chungking the following tariff of the Chungking Transport Company, issued in 1896, will give an idea of the expenses at different seasons of the year:

Description.	May 1 to October 31.		November 1 to April 30.	
	<i>Tael.</i>		<i>Tael.</i>	
Merchandise.....per ton..	25	<i>a</i> \$16. 13	22	<i>a</i> \$14. 19
Parcels and all shipments less than 1 ton...per foot..	1	.645	.75	.483
Do.....per pound..	.02	.0129	.015	.0096

a Taking the value of the Shanghai tael, as estimated by the United States Director of the Mint, October 1, 1898, at 64.5 cents. The haikwan tael equals 71.8 cents.

The ton is 40 cubic feet, or 2,000 pounds. Freight is payable on measurement or weight, at the option of the company.

The three or four steamship lines plying on the lower river have a combination with respect to freight and passenger charges which stops competition. The tendency therefore is to keep up the freight rates, which are very high, considering the distance the goods are carried.

TRAVEL AND TRAFFIC IN CHINA.

ROUTES OF TRANSPORTATION IN THE INTERIOR, METHOD AND COST OF TRAVEL, AND RATES FOR FREIGHT CARRIAGE.

The right of travel for business or pleasure in all parts of China having recently been granted to foreigners, the following description of the methods and conveniences of travel and transportation in the interior will be both interesting and useful. It was supplied to the State Department in 1896 by the United States consul-general to China, and published in *Commercial Relations*.

Outside of the foreign settlements, with their macadamized streets, there is scarcely a road in the whole Empire that deserves to be called a road. Exception must be made of a drive some 5 miles in length, recently built by Chang Chitung at Nankin, and a few miles of roadway, built some years ago at Tientsin under the direction of Li Hung Chang, the beginning of a highway to Peking. The road through the pass from Nan-keo to the Great Wall is also fairly well built and kept in tolerably good condition.

The ordinary road is a mere path, generally undefined by ditches or hedges, winding through the paddy fields or over the uplands, wherever the traveler can find the fewest obstacles to his progress. In the north, where carts are used, it is a common thing to see a new track cut right across a field of growing wheat in spite of the efforts of the owner to prevent it. A few attempts have been made at various times in the past to construct good roads, such as those from Tung-chow to Peking, Hanchung to Chingtu, and from Nankin to Fungyang, but for lack of proper repairs they were soon permitted to fall into ruin. The road from Nankin to Fungyang, 120 miles in length, was built by the founder of the Ming dynasty, who made Nankin his capital. It was a creditable piece of engineering. The roadway is some 25 feet wide, and in some places built up 12 to 15 feet above the surrounding country. There are remains in many places of ancient pavement, but this has almost wholly disappeared, and the road is simply a bank of earth which in rainy weather becomes altogether impassible. There are three splendid bridges on the road, built of stone, one of five, one of seven, and another of ten arches. Bridge building is regarded as a virtue in China, and there are some fine specimens in all parts of the country. In the neighborhood of the cities in central China the roads are partially covered with a pavement about 5 feet wide, composed of old bricks set on edge, with sometimes a line of cut stone in the middle for wheelbarrow traffic. On the larger rivers, which Chinese engineering skill has not been equal to bridging, there are ferries on which men and animals, carts and barrows, are carried across for a few cash. For crossing the Yangtze at Nankin the fare is 35 cash (2 cents United States money) for each passenger, 100 cash (5 cents United States money) for a donkey, and 150 cash (8 cents United States money) for a horse. Considering the wages paid, these rates are exorbitant. In many places relief is hopeless, since the ferries are in the nature of monopolies protected by the local officials. In contrast with the rule is the establishment occasionally of a free ferry by charitably-disposed persons who wish to store up a little merit against the day of settling in the world to come.

At present the least possible amount of money is spent in the making or repairing of roads. Sometimes improvements are made by private enterprise, but nothing of a substantial character is done. Where dikes are built along the banks of rivers or canals they become public thoroughfares, and as they must be kept in a fairly safe condition, they may be counted among the best roads in the country. Under such circumstances land travel is difficult, tedious, and disagreeable. In the transport of goods there is great economic waste. In bad weather there are long and vexatious delays. The roads in the north are cut up by cart wheels into deep ruts, which minister to the wrath and agony of the traveler and the destruction of any wares of a breakable character. Eight and ten horses may be seen at times tugging at a loaded cart which on a western highway would be drawn by a single team. In central or southern China, except in the treaty ports, the only wheeled vehicle seen is the wheelbarrow, which is used both for passengers and freight. In transporting freight, the barrow men travel in companies and aid one another over difficult portions of the road. This is also a protection against robbers, who infest certain districts. A single barrow man will sometimes wheel 400 catties (533½ pounds). The ordinary load is 200 to 300 catties. For land travel, the principal means of conveyance are the sedan chair, the mule litter, the cart (used only in the north), horses, mules, and donkeys. The most comfortable is the chair, but the use of this is denied to ordinary people in Peking and vicinity. The most expeditious is the horse. For transportation there are barrows, pack horses, mules, donkeys, and camels. Journeys are divided into stages of about 30 miles each, but the first stage on leaving a large city or the last on approaching it is always a short one, perhaps 15 or 20 miles. By forced marches a traveler can do much more than the ordinary stage, but he will find himself put to many inconveniences by being obliged to stop in small villages where no preparations are made for his entertainment. Even where such accommodations are found at the usual stopping places, they are of the rudest sort. The best are those found in the highway from Tientsin to Peking. A large courtyard, half filled with carts, is surrounded on the four sides with one-storied buildings of burned or unburned brick, covered with tiles or thatch. In these buildings are found the stables, kitchen,

[For value of standards of currency, weight, and measure see page 2256.]

sleeping rooms, and on the side next the street a tea house or shop. The bed at night and the table by day is the kang or brick structure, which is heated by flues passing through it. The rooms are fairly clean, sometimes papered; the fare, pork or mutton, with vegetables, is savory, and the charges exorbitant, as compared with other parts of China, due no doubt to the great number of "globe trotters" who pass up and down, and pay whatever the "Tientsin boy" may say. Through the central provinces the inns are much less comfortable, built usually of beaten earth and covered with thatch, the floor the native unsmoothed ground. You share your room with five or six other travelers, some of whom probably smoke opium until the small hours of the morning. The room may have a door, but often is without one. A small opening in the wall on one side is barred with a wooden lattice, which at one time was covered with paper, but this has been torn to shreds. A couple of trestles supporting four or five narrow boards form the bedstead, on which you spread your own bedding, to be thoroughly infested with flees and other vermin before morning. A saucer with a spout contains a little oil, in which a bit of wick is placed, and forms the lamp. There is a rude table for your meals and a trestle for a seat. The waiter brushes the bones and leavings of your humble repast on the ground, where a hungry dog is waiting to gather them up. In the smaller villages, your animals will be stabled in your bedroom and the whole village will assemble to see you eat or go to bed.

Travel by boat is by far the most convenient and most comfortable method in this Empire. In the maritime provinces and the Yangtze Valley waterways are numerous. A number of steamship companies are running steamers regularly on the Yangtze as far as Ichang. Boats leave Shanghai and Hankau daily, except Sunday. There is steam communication between Shanghai and Soochow and between Shanghai and Hangchow, also through the canals connecting these cities. Elsewhere, as yet, steam is forbidden and one must depend upon the native house boats, which are of various sizes but can be made comfortable. One must be prepared to suffer long delays at times when the wind and tide are unfavorable. The cost of travel and transportation varies in different parts of the Empire.

In central China, chair bearers will receive 360 cash (20 cents) a day apiece; in the southern provinces, twice as much. A donkey, with a boy, will cost 250 cash (14 cents) per diem without food, or 200 cash (11 cents) for one who furnishes food for the beast and his driver. A horse or mule will cost 300 to 400 cash (17 to 22 cents); a wheelbarrow for passenger and his luggage, 400 cash (22 cents). The barrow will not make over 18 to 20 miles in a day. Mule litters cost from 50 to 75 cents per diem, and carts from 50 to 80 cents. In the central provinces, food and a place to sleep will cost 200 cash (11 cents) per diem. In the north, it may cost 50 cents to \$1 Mexican (25 to 50 cents).

Boat traveling is much cheaper. On the smaller boats each person will pay 120 cash (7 cents) for one day's journey, which is about 100 li, or 33½ miles. On the larger boats, where there is no competition with steamers, as on the Grand Canal, 185 cash (10 cents) a stage is asked, and where there is competition with steamers this is cut down to 133 cash (8 cents). In addition, one must pay wine money and incense money, the latter to propitiate the gods and secure good weather. Food on the boats is usually extra, and costs some 35 cash (2 cents) a meal for rice. The passenger tariff on the river steamers depends upon the amount of competition. At present native fares on the Yangtze are very low, about 50 cents for every 100 miles. This includes two meals a day. Foreign rates are \$1.80 for 100 miles.

The cost of carrying goods varies with the means of transportation. A donkey will carry 100 to 150 catties (133½ to 200 pounds), and will cost 200 to 300 cash (11½ to 17 cents) for each day, with extras for food for the animal and his driver. One driver will take a number of animals. A horse or mule will carry 240 to 320 pounds, and will cost 350 to 500 cash (20 to 28 cents) a day. Camels will carry still more, but are used only in the north, where the cost is about 28 to 34 cents a day. A wheelbarrow will carry, as a rule, 180 to 300 catties (240 to 400 pounds), and will make about 16 miles a day at a cost of 17 to 28 cents. Where carts are used, freight is about 25 cents per picul. The average cost by land is estimated at 290 cash (16 cents) for every picul—that is, 133½ pounds carried 100 li (33½ miles).

Water freight is much cheaper. A boat capable of carrying 100 piculs may be hired at 1,000 cash (44 cents) a stage, or at 600 cash (34 cents) per diem. Larger boats, with a capacity of 300 piculs each, may be hired at 60 to 90 cents a day. The average cost by water will be about 7 cash for each picul for 100 li, wine and incense money extra. Freight rates on steamers are not so fixed, but vary from time to time. They are reasonably cheap. The principal trade routes are the following: From Tientsin by river to Tungchow, thence by land to Peking, or by land the whole way from Tientsin to Peking (a railway is in process of construction between the two cities); from Peking through the Nankeo Pass to Kalgan, and thence to Kiakhta and Siberia. There is an old road from Peking northeast into Mongolia, one branch of which leads to Shanghai kwan and thence to Kincheo, Moukden, and Kirin. But there is now a railroad from Tientsin direct to Shanghai kwan, and as there is an open port at Newchwang, the trade of Moukden and Kirin, as well as of the Liaotung Peninsula, naturally passes in and out at this port.

From Peking there is a road to Paoting Fu and water communication from Tientsin to Paoting Fu. From Paoting Fu there is the great northern route to the west, which goes via Taiyuen Fu, the capital of Shansi, thence to Pucheo on the Yellow River, which is crossed by a ferry, and from this point to Singan Fu, the capital of Shensi, and from thence to Lancheo, the capital of Kansuh, and beyond to Urumtsi, or by another route to Yarkand and Kulga.

From Taiyuen Fu a branch road goes westward, via Fungcheo and Yungningcheo, to Ninghwa in Kansuh. From Lancheo another road goes to Chengtu in Szechuen. It is forty-eight days' journey from Peking to Lancheo, and fifty-eight thence to Chengtu. There is also an important road from Paoting Fu leading to the southwest via Shenteh Fu, and thence to Kaifung, the capital of Honan, whence various roads diverge, the most important perhaps being via Cheekiakao to Hankau, whither we may go by land or partly by land and water. Another road leads to the west from Kaifung to Tung Kuan, where it joins the main line to Singan Fu, mentioned above. Another road leads south by way of Fungyang Fu in Nganhwiu to P'ukeo in the Yangtze Kiang opposite Nankin. From Tientsin there is connection also with Shantung and the south. The much talked of Grand Canal is practically worthless in its northern portion, and is abandoned by all boats from Tsining to Lintsingcheo, except by the tribute rice boats, which at great expense are annually dragged through to furnish employment to those whose interest in the traffic the Government seems unwilling to disturb. It must be understood, however, that but a small part of the tribute rice now takes this course, most of it going by steamer to Tientsin. The Yellow River though crossing all the northern provinces, is not utilized except for local traffic, although it is said by competent engineers that it can be made navigable as far as Kaifung Fu.

From Chefoo there are roads inland to Weihsien, Lai cheo, Tsingcheo, and the capital of Shantung province, Tsinan Fu, where connection is made with other roads north and south.

The great artery of commerce is of course the Yangtze Kiang, which is navigable for some 2,000 miles. Steamers ply between Shanghai and Ichang, about 800 miles. Above this point navigation is made somewhat difficult by a series of rapids, and the Chinese Government so far has successfully opposed the introduction of steam, although the difficulties are not insurmountable. Our American

stern-wheel boats would be able easily to ascend the rapids. A boat of this sort was indeed built for this purpose, but permission to use it was not obtained. As there is now an open port at Chunking, it is not improbable that steam communication with Szechuen will soon be obtained. At present communication is kept up by native boats, which are dragged through the rapids by towlines pulled by men.

From Chinkiang, 156 miles from Shanghai, communication is had north and south by the Grand Canal, which is available for large junks from Hangchow to Tsingkiangpu, whence connection is made by the Hwai River with northern Nganlwui and Cheokiako, the great distributing center of Honan. This is the most natural route to these districts, but owing to the heavy likin charges, the greater part of the traffic goes via Hankow or across from Nankin, overland. In fact, much traffic is diverted from all the main channels by likin charges, and a great deal of distribution is done by bypaths. An extension of the canal supplies good navigation to Tsi-ning in Shantung, and rice boats, as said before, are taken clear through to Peking. A perfect network of waterways, partly natural and partly artificial, in Kiangsu, is connected with the Grand Canal and the Yangtze, and furnishes cheap and comfortable communication with all parts of that province.

From Nankin, a caravan route mentioned above, extends from Pukeo on the north side of the river to Fungyang Fu, 120 miles, with connection beyond to the north and northwest, connecting with the Hwai River route and farther on with the great northern road to the western provinces.

From Wuhu there are waterways inland both north and south. From Kiukiang via the Poyang Lake there is good water communication with Nanchang Fu, the capital of Kiangsi, and thence overland by the Meiling Pass to Nanhung Cheo in Kwantung, from which there is water communication by the eastern branch of the North River. Before the development of steamship traffic by the opening of the treaty ports trade between the central provinces and Canton all went by this route. From Kiukiang northward, there is a highway to Lucheo, where connection is had with Nganking on one side and northern Nganhwui on the other.

Connection between the Yangtse Valley and the south is also had via the Siang River to Ningyuen Hsien, and thence overland by two routes, one into Kwangsi and the other to Lincheo in Kwantung and by the North River to Canton.

Through the Tungting Lake, by the Chang River, communication is made with the provinces of Kweichow and Yunnan.

The most important center on the Yangtse doubtless is Hankow, whence there is an overland route northeast into Honan and thence to Peking, and a water route via the Han and T'ang rivers to the same region.

A very important trade route is from Kankaw by the Han River to Lao-ho-keo and thence by boat to Kongsih kuan, and from there by mule over the mountains to Sinngan Fu, where connection is made with the roads mentioned above. The principal trade route into Szechuen is naturally by the Yangtse, but from Chingtu there are roads branching in various directions. One, called the Great South road, leads to Yachou, two days beyond which place, at Tsingli Hsien, it divides, one branch going west to Tatsienlu, Litang, and on via Batang to Lhasa, the capital of Tibet, 1,500 miles from Chingtu, the second branch connected with Yunnan by the valley of the Kienkiang.

The Great East road connects Chengtu with Chunking, 340 miles. The Great North road leads to Singan and thence to Peking. The West road furnishes communication with Sungpwan and Kokonor.

From Chunking, there is connection by water with Lucheo Fu, whence there is an important overland route to the capital of Yunnan. At Lucheo it is joined by a road from Chungtu. A more popular route to the northeast from Yunnan Fu is by Kweiyang, the capital of Kweichow, through Chengyuan, on the river Chang down, through Hunan to the Yangtse, a route referred to above.

From Yunnan Fu, the chief trade route is overland via Mengtze to Manhai and thence by boat to Laokai, and from that point down the Red River to Haiphong, in French Tonkin. It is twenty-one days by this route from Yunnan Fu to Haiphong. This is the most natural route from the south into Szechuen.

The old tribute road from Burma to Peking passes through Yunnan Fu, coming from Bhamo by way of Tengyueh and Tali Fu. It is about 350 miles from Yunnan Fu to Tengyueh and seven days from the latter place to Bhamo. This route has been proposed for trade with British Burma, but is regarded as an impossible one by some of those who have been over it, owing to the natural difficulties. It crosses nine distinct mountain ranges by lofty passes accessible only by very steep paths. Engineers have nevertheless indicated a practicable route for a railway in this direction. A better route is said to exist by the Irrawaddy, from whose head waters there is easy connection with the highway from Lhasa to Chingtu.

From Mengtze, there is another route of importance, which connects with Canton by way of the West River. It is 350 miles from Mengtze to Poknay, the head of navigation on the left branch of the West River, whence a boat journey of a month or more will bring one to Canton. From Poknay, there is connection also with Kweichow. By leaving the West River below Nanning Fu at Nanh-siang, a land journey of three days and a water journey of seven more will bring one to Pakhoi. The West River seems the most easy and practicable route to this region, but here, as elsewhere, undue exactions in the way of likin dues have diverted the bulk of the trade into other and more difficult routes. From Wucheo on the West River there are land routes to Kweilin and Nanning, and from Nanning to Peisch and Lungcheo, whence there is connection overland through Tonkin to Haiphong. The foreign goods for Lungcheo, Nanning, and Peisch come mostly from Pakhoi instead of by the natural route via West River from Canton.

From Pakhoi to Nanning, by the usual trade route, is 262 miles, all but 53 miles of which may be made by water. From Nanning to Peisch is 283 miles by water, and thence one can go directly to Yunnan Fu, which is 600 miles by land. The French have secured a concession for the construction of a railway from Lungcheo to Chengnankwan, where it will connect with the Tonkin system of railways. This will give the French port some advantage over Pakhoi.

THE "MIDDLEMEN" OF CHINA.

[From British Board of Trade Review for August, 1898.]

Manufacturers sending goods to China should be represented there by intelligent, respectable, and competent agents.

These agents should be authorized to (and be capable of) discussing industrial questions and of availing themselves of the best markets.

The Belgian consul at Shanghai says also that the indispensable intermediary (or, as they are called in England, "middlemen") between the European and Chinese traders is the "compradore," whose name is derived from the Spanish *comprador*, i. e., buyer.

The earliest foreigners who came to settle in China for purposes of trade carried on business on the principle of exchange only, receiving merchandise in return for that which they brought with them, and the interior of China being closed to foreigners they were obliged to have recourse to intermediaries to procure what they required.

This method has been adhered to and attained its greatest importance at the time of the "merchant princes," whose profits were so enormous that the heads of foreign firms did not condescend to occupy themselves with their business, but left the conduct of their affairs to their "compradores."

The desire of the Chinese to obtain large profits and the carelessness evinced in the direction of affairs on the part of the Europeans combined to bring about the inevitable state of affairs, viz, that a large portion of the profits were pocketed by the "compradores."

Not only the purchases but the sales also were intrusted to them, and, as an explanation of such a state of affairs, it was urged that the Chinese language is difficult, that the Chinese pay with bills at long dates on banks in the interior of China, and that, consequently, a man of business was required conversant with the commercial customs of the country; but the true reason was that, notwithstanding the personal pickings of the "compradores," the profits were so large that they only went into business affairs when they had the time.

The result was, as stated, that the compradores amassed wealth and gained the important position which is theirs to-day.

At the present time the method of conducting business has completely changed; the merchant princes have disappeared from the scene, leaving only the memory of a time of profits and extravagance.

Telegraphic communications and the opening up of rapid and easy routes by steam, especially by means of the Suez Canal, have introduced a new generation in the Chinese markets with small capital, and sometimes none at all, but with a love of work and a spirit of economy.

An enormous competition has been created among these newcomers—all workers—a keen, constant struggle, in which the old wealthy firms have succumbed.

The rôle of the "compradore" has thus been modified; he continues, as before, to hold all the business in his hands, both in the buying and selling markets; but to these professions he has added an important one—that of money lender.

Under such conditions, and considering the mercantile spirit of the Chinaman, it may be concluded that the firm who employs the "compradore" serves for him simply as a means of speculation. It may be asked why this costly and ruinous middleman is not suppressed; and it may be answered, because it is impossible, and because a firm that had no "compradore" would do no business. These middlemen have been incorporated for a long time; their corporation is the richest and most important in all China, and any merchant wishing to do business with a foreign firm must deal first with the "compradores."

If a trader tries to trade direct, he is annoyed in so many ways that he hastens to return to what are called "old customs," and China, it should be remembered, is an essentially conservative country, where an established custom has the force of law.

The consul adds: "It may be seen, therefore, that the guild of 'compradores' is a commercial institution in China, and that it is useless to think of suppressing it or diminishing its importance."

DEVELOPMENT OF GERMAN TRADE IN THE FAR EAST.

[British Board of Trade Journal, April, 1898.]

A dispatch dated March 13 last has been received at the foreign office from Her Majesty's minister at Dresden, inclosing translation of an article which has appeared in the Dresden Journal concerning the development of German trade in the far east.

The writer of the article referred to states that the last ten years have been characterized by a remarkable growth of German trade with the far east; indeed during the past seven years this increase has assumed such dimensions that a consideration of some of the more striking facts in this connection should not prove uninteresting.

The three main factors which claim attention are (1) the increase of German firms in eastern Asia both numerically and also as regards the volume of their trade, (2) the expansion of the market for German goods, and (3) the development of German shipping.

To the German firms in the far east the chief credit for this development of German trade is naturally due. A fact of still greater moment, however, is that some of these firms were established in eastern Asia long before there was any idea of a considerable trade in German goods, and that consequently by this time they have acquired an extremely wide connection, and have thereby become most effective agencies for the spread of German influence and the expansion of German trade. The influence of the old-established German houses on the development of German trade in the far east has greatly lightened the task of the younger firms.

These latter have in most cases sprung from the former, since employees of the older houses, after acquiring practical experience of the business, have frequently established themselves independently. The new firms have derived considerable benefit from the steady progress which German goods have made in the market and the ever-growing consumption of them in China. A further essential stimulus toward the foundation of new German houses is supplied by the institution of subsidized lines of mail steamers, which by establishing regular communication have materially increased the facilities of travel in the far east, extended the knowledge of local conditions, and reduced the difficulties attendant on the carriage of imports and exports.

The combined effect of these circumstances alone accounts for the fact that during the decade commencing with 1886 the number of German firms in eastern Asia has risen from 56 to 92 in China, and from 38 to 57 in Japan.

As regards the actual trade in merchandise, it is extremely difficult to obtain statistics previous to the inclusion of Hamburg and Bremen in the German Customs Union in 1889. But even during the short space of time which has elapsed since that inclusion, the German goods trade with China and Japan has increased in so remarkable a manner as to call for attentive study by all parties concerned. From 1889 to 1896 the exports from the German Customs Union to China have increased from 24,250,000 marks (£1,212,500) to 45,250,000 marks (£2,262,500); that is to say, by 86.72 per cent, while to Japan the increase has been from 18,500,000 marks (£925,000) to 35,500,000 marks (£1,775,000), amounting to a rise of 92.2 per cent.

Still more considerable is the development of the import trade not so much in absolute value as in relative growth. During the above-mentioned years the imports from China into Germany have risen from 8,500,000 marks (£425,000) to 20,000,000 marks (£1,000,000);

that is to say, by 136.5 per cent, whereas the imports from Japan have increased from 3,500,000 marks (£175,000) to something over 9,000,000 marks (£450,000), a rise of 162.7 per cent.

Particular interest attaches to the fact that Germany's share in the development of the countries of eastern Asia is relatively greater than that of other nations. "No other nation," says the correspondent of the Dresden Journal, "can show so great a relative increase of trade as Germany." Nevertheless, an unusually wide and rich field remains open to German enterprise, as is proved by the fact that even now Germany's imports into China only amount to one-sixth and into Japan not more than two-sevenths of the English import trade. Germany's share in the total imports of both countries amounts roughly to 10 per cent. As regards the exports from China, the German trade only amounts to one-sixth of that of Great Britain and to one-third of the total; of Japanese exports Germany's share is one-third of that of England and one thirty-eighth of the total.

Finally, with reference to the development of German shipping it should be noted that the tonnage of German vessels trading with China and Japan has risen from 84,000 in 1886 to 219,392 in 1896, and mention should also be made of the trade now carried on by German coasting steamers in China, which is steadily increasing in volume.

The doubling of the subsidized mail service to eastern Asia, as well as the opening of Kiao-Chau as a free port, will provide German trade in the far east with new facilities and the widest of spheres for its development.

The skill of Germans in obtaining foreign trade is well known. Occasionally, however, new and interesting details of their methods come to light. The latest information is furnished by Mr. Leroux, French consul at Hongkong. He states that the Germans have abandoned the idea of relying entirely upon the trade of Chinese whosale houses. Their principal efforts are now directed to retailers. It appears that as soon as German commercial travelers land they begin to study the language; a slight knowledge obtained, they undertake, with unequalled persistency, to persuade some native merchant to give them a trial order. As soon as the goods arrive they visit their client, and if he makes any complaint they assure him that the fault or error can be readily corrected or avoided in the next order. If necessary they finally make a considerable reduction in the amount of the bill.

When the day of payment arrives another visit is made. This time the purchaser is told he need not press himself to settle the whole account; a partial payment will suffice if he is willing to give a new order. If the client consents he is trapped. Although the merchandise may be inferior to French or English makes it offers to the dealer the great advantage of cheaper prices and greater profits. The consumer becomes accustomed to it and hesitates to pay the higher price for the better article.

Thus, at the expense of many apparent concessions and much hard labor—relatively small, however, in proportion to the results—the market is opened to German goods. It is afterwards comparatively easy to enlarge it.

THE GERMAN COMMERCIAL MISSION TO CHINA.

[From the British Board of Trade Journal.]

A dispatch has been received at the foreign office from Sir Frank C. Lacelles, H. M. ambassador at Berlin, inclosing a report by Mr. Harriss Gastrell, commercial attaché to the embassy, which states that a brief report appears, according to newspapers, to have been finished by the members of the German commercial mission to eastern Asia on their labors. It will be remembered that some fifteen months ago this mission left Genoa for the East, and that it had been organized by Germans interested in trade and industry, with help from both the German and Prussian governments.

Five months' work was devoted to a study of China, and another five to Japan. Hongkong was first visited and then the treaty ports of Canton, Swatow, Amoy, etc. The mission penetrated 1,100 miles up the Yangtze-kiang and visited the chief towns on its banks, and especially the lately opened and populous Shashi. The newly opened treaty ports of Samshui and Wuchow were also visited. An accurate knowledge of the rich province of Chekiang and of the southern portion of that of Kiangsu was obtained. The silk districts, of which the center is Canton, were also seen. Some members of the mission also made a land journey from Tientsin to Newchwang and neighboring districts. Japan, being so much smaller, was thoroughly visited, and a short time was even given to Korea; limited to a visit to the chief port, Chemulpo, and to Söoul.

As to the practical results of the long journeys undertaken by this German mission an exhibition of the samples gathered in China and the other countries visited was opened in Berlin in April, 1898. This collection was to remain in Berlin until April 28, and then go to Dresden, as Saxony is particularly interested in the collected samples. The exhibition is only open to those persons actually interested in the trades concerned and to members of the chambers of commerce and some officials; no other persons are admitted, and entrance is only permitted on the presentation of a permit from the society of industrialists. The general report, and the valuable special reports on the different branches of particular trades to the east will not be published, except for private circulation among those persons interested in each particular branch. Copies of these reports are not to be obtained anywhere for the general information of the public.

The Nord Deutsche Zeitung of April 20, however, gives a general account of the said exhibition, of which the following is a précis:

The exhibition took place in two large rooms of the Reichstag building, where over 5,000 samples were displayed, which show that the collection is the result of the close study of technical men who thoroughly understand their work. The exhibits have a twofold object, and show, firstly, what European and American goods are exported to east Asia, and, secondly, what goods can be purchased out there.

The most important exhibits are by far those of the clothing industries. The cotton industry is represented by over 1,000 samples; the silk industry has almost as many, and the woolen industry has several hundred. There are large numbers of wonderful art colored silks and embroideries; but these are less important to Germany than the small samples of plain silks, especially Chinese "pougees," which are exported from China in such large quantities to France and India. Beside them is a collection of all kinds of Japanese "habutayes." The samples give a good idea of the colors and taste in favor in China and Japan.

Alongside these native productions are seen samples of imported wares, such as black satins, velvets, and plushes in those colors and quantities which are in demand in the far east. There is a large collection of ribbons and trimmings; of raw silk of all kinds and in all stages, and especially of so-called Canton silk exported from south China; of tsatlees from the country behind Shanghai. Such a

complete collection has never before been brought together in Germany. It may also be mentioned that a new method of unwinding the silk from the cocoons has been found, by which the quality of the so-called "wild silk" of northern China will be much improved. Specimens of Korean silk productions are also shown.

In cottons the collection especially shows the labor expended on this branch; all kinds of native and imported goods are shown, including those of the new mills in China and Japan. Samples are shown of all the leading cotton imports from England and in which Germans can not yet compete.

Ramie, hemp, jute, banana fiber, and articles made of them, are there also.

FRENCH COMMERCIAL MISSION TO CHINA.

Consul Covert sends from Lyons to the State Department, under date of December 6, 1897, the following report:

Two French commissions have visited China for the purpose of discovering means of extending their trade in that Empire. The first, in 1843, published its findings to the world, and England derived more profit therefrom than France. The conclusions arrived at by the last commission, which left France a little over two years ago and returned in October last, after a thorough investigation of the agricultural, industrial, and commercial conditions of China, will not be made public, but will be recorded for the use of the several chambers of commerce which shared in the expedition.

The brief report of the commission just made by its director, M. Henri Bernier, to the minister of colonies and the Lyons Chamber of Commerce, contains many facts and statements, which are herein briefly translated, as they may prove valuable to American business men.

The commission found that the Germans had become redoubtable rivals of the English in China; that they and the Russians had established cotton factories and tanneries and feather-cleaning shops (the yolk of eggs being used in the process of tanning); that the Russians have tea factories (factories Russes pour le thé), and are growing coffee.

The country is reported to be rich in copper, iron, lead, silver-bearing lead ores, tin, zinc, native silver, and oils, and to have immense deposits of coal. The development of these mines, says the report, will open up a great field for the use of French tools and machinery and furnish employment for thousands of French mechanics. One hundred thousand tons of coal were transported from Tonkin to Hongkong in 1896, and retransported to Canton and Shanghai. The lack of facilities for transportation is illustrated by the fact that copper mines worked near a river believed to be navigable depend upon carts to haul the ore over a bad road in a journey of fifteen days.

The commission made a thorough investigation of the silk industry, and brought back over "thirty specimens of silk absolutely unknown heretofore in the Lyons market."

The commission reports that there are much better means of reaching the rich Yunnan country from the French possessions in Indo-China by the Red River than the English have in Burmah. It styles Wuchang, the capital of Hoo-pe, and Hanyang, "the commercial heart and the Chicago of China." It is a city of a million and a half inhabitants, the central market of about 70,000,000 people, the seat of a number of industries conducted by Europeans, and will soon be united to Peking by a railroad now in course of construction by Belgians.

The commission sees a great agricultural future in store for Tonkin, Cambodia, and Cochin-China. The exceedingly rich soil is capable of producing incalculable quantities of cotton. Of the 2,000,000 hectares (nearly 5,000,000 acres) of cultivable land in Cochin-China, but 700,000 hectares (1,700,000 acres) have been cultivated. Rice is the staple product. Saigon annually exports 500,000 tons. All the rice grown there would be consumed by the 350,000,000 inhabitants of China. Better silk is produced in Tonkin than in Canton. Coffee grown in Tonkin and tea in Anam are beginning to be remunerative.

The commission reports that French cotton fabrics are preferred in Tonkin and Cochin-China to those of other countries.

This brief abstract of the report embodies the chief points of commercial interest. The most important findings of the commission are held in reserve for the exclusive use of French business men. It may be inferred from what has been given to the public that the commission recommends the establishing of mills and factories in China, cooperation with Chinamen in the opening and management of mines, the development of certain lines of agriculture, and the opening of better wagon roads. The building of railroads by French companies is also advised, as well as general improvements in industry, and the creation of trade conditions by which the swarming population of China may find means to purchase, or to acquire by exchange, the products of France and of the French province of Indo-China. An effort will probably be made to convert this province into a workshop for China and an entrepôt for French goods destined to the Chinese market. The incessant travel and constant interchange of domestic products, notwithstanding the primitive methods of transportation, are cited as arguments that better facilities would be readily adopted. France has been taught by experience that colonies are a burden until they produce commodities that can be exchanged for the products of the mother country. Senegal buys forty times as much from France to-day as she did thirty years ago, solely because she produces that much more of what France needs. The aim of France will be to make China productive in order that her 350,000,000 inhabitants may have something to sell and the wherewith to buy. France, with ten times less population, has seven times more foreign commerce than China. With European facilities for production and distribution, the annual output of China will approximate more nearly the quota which her population should render to the aggregate of the world's production.

Four great nations—England, France, Germany, and Russia—are engaged in a determined struggle for the trade of China. United States business men will leave nothing undone to advance their interests in that Empire. While the great nations of Europe are grasping for Chinese territory, it is probable that the most durable conquests may be achieved by peaceful methods. Civilized nations have equal interests in opening the trade of China to the world, and the powers that attempt to accomplish it by war and conquest do no more than strengthen the Chinese wall. The advantage that France has consists in her open frontier through Indo-China, which will furnish a short route when the Red River is dredged. Another advantage is the possession of an abundance of cheap capital. But all this will be met if the Americans build the railroads that they have long contemplated constructing in China.

BRITISH COMMERCIAL MISSION TO CHINA.

[The value of standards of currency, weight, and measure see page 2256.]

The following statement of the condition, present and prospective, of the market for cotton and cotton goods in China is from a report by Mr. F. S. A. Bourne, the head of a British commercial mission which traveled through central and southern China during eight months of 1896 and 1897 for purposes of observation of commercial conditions. The report was presented to the British Parliament in May, 1898:

In the staple of our import trade, namely, gray and white shirtings, there is no direct competition—that is, no other country is making the same class of goods; but there is indirect competition, especially from Japanese figured fabrics, and from Indian, Japanese, and Chinese yarn, woven at home. These compete with shirtings by tending to displace them. In coarse cotton yarn Lancashire is out of the market, beaten by India, Japan, and China. In drills and sheetings, which came little within the area of our inquiry, as they are used in the colder provinces north of the Yang-tze, we have a most redoubtable competitor in the United States.

We can only compete with Japan in her specialties by the adoption of far-eastern design and by constant changes of pattern. Li Chung-t'ang, with whom we crossed the Pacific, told me that, in his opinion, improvement in design was essential in order to keep our cotton trade in China. Whether we could, or rather would, so far comprehend the *motif* of Chinese design as to copy and develop it in England is perhaps doubtful, although it seems to be limited in range and often of artistic merit, based, of course, in that case on true principles to be discovered by analysis. A study by good designers of the collection brought home by the mission of the best patterns in silk brocades, which are said to be the traditional basis of all native textile design, may throw light on the question.

There has been a rapid increase in the import of Bombay yarn into China, the figures for Shanghai being:

Year.	Quantity.
	<i>Piculs.</i>
1892.....	393,400
1893.....	485,245
1894.....	553,806
1895.....	559,921
1896.....	857,891

The fact is that all over the west of China Indian yarn is killing what little local cultivation of cotton there was, and when woven is encroaching on homespun cloths, and to a much less degree on imported gray shirtings.

The Chinese masses have always worn homespun cotton cloth for the most part, supplemented with imported drills and sheetings in the north and northwest, where it is cold and where domestic weaving is not common. The finer imported cottons, like shirtings, have been for the well to do only. About twenty-five years ago the import of foreign yarn—English, and later Indian—led to the weaving of a cheaper cloth, which is displacing more and more the native homespun. Before the war with Japan the Chinese were beginning to erect spinning mills, the enterprise being conducted in the half-hearted and incompetent way usual with them in large undertakings, and when, by the treaty of Shimonoseki (1895), foreigners obtained the long-coveted right to manufacture in China, four foreign-owned mills were put up in Shanghai and others will follow. By the end of 1898 there should be about 500,000 spindles running in China. Mills here run in day and night shifts of twenty-one to twenty-two hours out of the twenty-four in a year of three hundred to three hundred and twenty days, allowing for holidays. Taking the production per spindle at 10 ounces per day of twenty-four hours in a year of three hundred working days, we arrive at an output of about 700,000 piculs of yarn. But considering that the operatives will nearly all themselves have to be first made out of raw hands that have never seen a power machine, it can scarcely be expected that even this result will be reached for a year or two. The import of cotton yarn into China during 1896 was 1,461,365 piculs.

It might be expected that the native yarn would reduce this foreign import, and some day this will no doubt happen, but I believe not yet. If the country were opened up by the abolition or systematization of inland taxation and by improved means of communication its capacity for the absorption of cotton yarn would be enormous. In 1895 there was a difficulty in the way of the import of Chinese-spun yarn into the prefecture of Huai-ngan Fu (latitude 33° 25', longitude 119° 22'). A syndicate had been formed, in which the local importers and the likin officials were all interested, by which yarn spun at the Chinese Government mill in Shanghai was excluded. When the difficulty had been overcome and the yarn admitted, this one district took the whole output of a mill of 60,000 spindles for six months. This I heard on excellent authority. If greater facilities were granted, the same thing might happen more or less all over southern and western China.

The import from Lancashire, being of the finer counts, will not be lessened by the native mills. On the contrary, it is probable that as the Chinese improve in hand-loom manufactures and take to weaving finer cloths, the import from England may increase. The Indian import is of counts 8s, 10s, 12s, little of 14s, and a great deal of 20s. The Chinese mills spin mostly 14s, some 10s and 16s, but not finer. It seems quite likely that local manufacture and Indian import may run on together at all events for a few years. Should Indian yarn improve in fineness, it is possible that the handmade cloth from this yarn may displace Lancashire shirtings to some extent; but in the long run I am not apprehensive on this score. Even if the Chinese began to import fine enough yarn—28s, 30s, and above—and this at present would have to come from England, their hand-loom fabrics could not have the finish of Lancashire cloth, and as the masses began to wear finer homespun, fashion would demand that the classes should wear something better, so that it seems probable the richer the Chinese get by what they make themselves the more they will be able to buy of our finer fabrics. Only let us take care that our fabrics are finer, better woven, better designed, and especially that we have the organization in China to bring our goods to the notice of those likely to buy them. The more of the commoner yarns and cloths the Japanese have made themselves the more of the finer they have bought from us. There is every reason to suppose the same will happen in China. It must be remembered that the Chinese do not use cloth woven of Indian yarn because they like it, but because it is cheap and because they are very poor. They buy Lancashire cloth as soon as they can afford it. And it is better for Lancashire that coarse yarn should be spun by machinery

in China and India than that it should be spun there by hand, for the enormous saving in spinning by machinery means increased power to pay for Lancashire goods. Still better is it than that it should be spun in foreign countries closed to our goods by hostile tariffs.

The saving in weaving by machinery is relatively much less than that of spinning, and the day of the power loom in China seems scarcely to have dawned. There are looms in several existing mills, but they seem to be little used, spinning being found more profitable.

The future of manufacture by Western methods in China is a subject of the utmost importance to every Englishman. The following facts and opinions may help experts to a judgment:

In regard to wages employers in China are at a great advantage. The wages of an adult man on the Lower Yang-tze for a day of twelve hours for, say, three hundred and twenty days in the year in such industries as native hand weaving and dyeing average, at the present gold price of silver, 10s. to 12s. a month, all included. Wages may be expected to rise somewhat in the future for the more skilled classes of labor, as the number actually efficient must be limited, at least until the system of apprenticeship, which is universal in China, has had time to take root in regard to the new industry, but any great change in the level of wages among the plain workers must be very slow, as the operatives will have pressing upon them the mass of millions of cheap workers, with just as good capacity as themselves—unless, indeed, manufacture is congested in one place and labor allowed to get into the power of Chinese middlemen. The truth is that a man of good physical and intellectual qualities, regarded merely as an economical factor, is turned out cheaper by the Chinese than by any other race. He is deficient in the higher moral qualities, individual trustworthiness, public spirit, sense of duty, and active courage, a group of qualities perhaps best represented in our language by the word *manliness*, but in the humbler moral qualities of patience, mental and physical, and perseverance in labor he is unrivaled. Physically he is a hard man—I am speaking of the laboring class—far from an Asiatic as we use that word in English.

It seems probable that under the leadership of skilled European managers and foremen of character and temper, firm, just, and reasonable, the Chinese coolie and his wife will make excellent textile factory hands. European superintendence is essential precisely because of their moral shortcomings above stated. Judged by our standards, we must pronounce all organizations in China (with a few exceptions noted in secs. 31 and 36) above the family and the small business partnerships to be hopeless failures. The upper class seem to lack the moral tone to carry on big enterprises; indeed the laws and the courts of justice are wanting as well as the men.

Still here these millions of patient reasonable workers are only wanting leaders to make them producers on a gigantic scale, and leaders they will most certainly find. Whatever the future in politics of China may be here these workers must remain; and they are, in my opinion, destined to modify profoundly the condition of the world's industries.

To return to cotton manufacture, all Western employers and overseers of Chinese agree that they excel in lightness and deftness of hand, and that they are well suited in physique and intelligence for work in cotton mills. They show extraordinary powers of endurance; for instance, boys in the Hankow mill work through the whole night without leaving the mill, and with only a little rice congee by way of food. There may be temporary difficulties with labor. The Chinese have always practiced a form of strike against bad government, directed at the officials, by ceasing to do business, shutting their shops, etc.; but we hear little of combinations of workmen directed against employers, probably because these latter are many, scattered, and in a small way. It is probable that workmen employed in cotton mills will combine, but there is in China a dreadful poverty of the masses, due to rapid increase of population, wherever a district has been spared rebellion and famine for a few tens of years, and nothing can keep up the wages of common labor which must remain, under the present system, close on starvation point.

In regard to land, the Lower Yang-tze Valley is as perfect a site for manufacturing industries as can anywhere be found, with coal and iron in easy reach, a temperate climate, and good means of communication by water.

I am told that the samples of Yang-tze cotton used in the Shanghai and Hankow mills will show that it is not capable of being spun into finer yarn than about 20s, nor is there much likelihood that the cotton plant will be shortly improved here by careful selection of seed and cultivation. The Chinese never try to improve the breed of animal or plant, and the farming class, small holders, is very hard to move—witness their failure to grow and make tea to suit the altered taste of consumers in England. How far the cotton crop can be increased it is difficult to say, but it seems probable that it could be greatly increased, that is, of cotton of poor quality. Broadly speaking, China derives her supply of cotton from the Yang-tze plain—i. e., 100 miles on either side of that river from Ichang to the sea. Before the rebellion, 50 years ago, China had many millions more to clothe, while she imported less cotton goods; she then grew more cotton than she does now.

In regard to capital, the third agent besides land and labor in production, the Chinese have not sufficient to develop their country even with the present backward methods of industry; and interest is accordingly very high. The country does not now produce the precious metals to any extent; and the Chinese have, it is believed, no more of silver and copper than is required for the ordinary circulation; but they are likely to get ample capital for enterprises under foreign management from abroad, and there is no more promising field for the investment of English capital. No English money has been lost in China through the act of the Chinese Government, and little in any other way than by bad business.

In regard to the next few years it is to be expected, granting moderate taxation, that the spinning mills under foreign management will do well, and that those under native management will be driven to the wall.

Regarded by itself, and not in connection with the interests of British trade generally in China (see sec. 51), Shanghai is in a very prosperous condition. Still there are points of detail in which improvement is possible.

The privilege of bonding is one that would greatly assist the import trade, with little expense or inconvenience to the Chinese customs. One merchant told me that he had £7,000 out in duties on Lancashire piece goods. Should the duties be raised on a revision of the tariff, this burden would be proportionately more onerous. At present bonding is allowed only in the warehouses of the China Merchants' Steam Navigation Company, a Chinese association of which the resources are not known, and which would have to be sued in a Chinese court, so that the more substantial foreign houses make little use of the privilege. Instead, merchants charge against the goods 6 per cent on money out in duties. Small houses, chiefly German, bond sometimes. They have little to lose and can run the risk. No one can wonder that the larger firms fight shy of bonding under these conditions. There is no one to sue and no court to sue in. In case of difference there is nothing but the discouraging prospect of a prolonged negotiation, followed even in the clearest case by a compromise. But there is in Shanghai a British joint stock company, the Associated Wharves, with large capital, and able to give the best security both to the Chinese Government and to the merchants.

It is difficult to see how the privilege of bonding can reasonably be denied to this company. It is understood that the interest on money lying to the customs credit in Shanghai goes into the pocket of the local authorities, while the increase in duties that may be expected to accrue from bonding facilities would go to the Chinese Government.

There is a delay of from two to eighteen months before payment of drawbacks of duty after the reexport of the goods has been proved, the money being kept meantime by the Taotai. One English merchant told me he was 14,000 taels (about £2,000) out in

this way. The local authorities lend this money on their own account to the native banks at 7 per cent per annum. Besides the loss of interest, the foreigner and the native alike suffer from the power which the command of these large funds gives the local authorities of manipulating the native money market.

The head of the largest British shipping firm in Shanghai told me they themselves were out 15,000 taels (about £2,100) in drawback duty, but that their Chinese shippers were out 50,000 to 60,000 taels (about £8,000). In Shanghai these drawbacks are for import duty, but at Hankow and the river ports the same firm was out in coast-trade duty—i. e., 2½ per cent ad valorem—repayable if native exports are shipped to a foreign port 20,000 taels (about £3,000). Why can not all drawback certificates be issued by the customs within one month, and be available at once and in any hands for payment of all duties, including tonnage dues?

I was told by one merchant that American drills pay 3d. or 4d. a piece less freight to China going in British ships by way of Liverpool than Manchester goods by the same steamship and under the same bill of lading; and I was told that Dutch piece goods from Antwerp and German from Hamburg have the same kind of advantage. Another merchant put the difference at 17s. 6d. a ton from New York and 30s. from Liverpool by the same steamer. There is much to be said from the shipowner's point of view no doubt but it certainly seems at the first glance an anomaly that a British line of steamships should give our rivals in trade so much better terms.

120. I have shown in the above report that likin is a great obstacle to our trade, that our right to transit passes is withheld over a great part of the Empire, that our goods are heavily taxed by octroi in great cities long open to our trade, and that steamers might ply in many places now closed to them with very great advantage. On all these points it is quite clear what should be done.

But granted that all the above obstacles were removed and rights obtained to the satisfaction of the most exacting Englishman, could they bring about any great development of China's foreign trade? Perhaps our imports might cost the consumer on the average all over the Empire 10 per cent less than they do now, but I believe this to be the limit of improvement possible in that respect. Variations in price from year to year of 20 per cent and more, due to silver exchange, are not found to cause any great difference in demand. Our manufactured cottons reach the ends of the Empire and are there selling at prices by no means exorbitant. It is true that the opening of the internal waterways would be a really great advantage to our trade, if his profits as a carrier enabled the British merchant to establish himself up country, to find exports and develop imports, at all events it would help to break down the likin system besides improving communications; but otherwise it will only result in a profit to the shipowner on the carriage of native cargo.

121. It seems to me that without a revolutionary increase in the value of exports from China there can be no such development as is contemplated when the foreign commerce of China is compared with that of India; and that such an increase can only be brought about by the greater activity of Englishmen in the interior of the country. As things are, Shanghai and Hongkong are tending more and more every year to become merely suburbs of London and Manchester. The mercantile recruit who goes there is often required to do in Shanghai the same work and no other work than he did in London. All that is done after the home methods is very well done, and Hongkong and Shanghai are places of which every Englishman must be proud, but there is little attempt to do in China what was not done at home, to understand the language, the country, and the people, to specialize as the agent in China of British interests, as the link between the provincials of China and the English market. In all this there would be nothing to regret if there were flourishing British settlements in the interior acting as intermediaries and feeders of Shanghai; but I have explained that British capital is being withdrawn from the outports. The result is that the whole work of finding exports and providing imports is left to the natives, who, although often driven to great exertions to earn a living, are naturally apathetic and will attempt nothing new.

In withdrawing from ports like Hankow and not establishing themselves at ports more recently opened, British merchants acted, there is no doubt, on business principles and on a very correct judgment of the facts of the case. Forbidden to manufacture, to plant or to mine, hedged in by customs regulations strictly administered by a foreign staff, they were confined to bare export and import, and this they found could be carried on more profitably at Shanghai and Hongkong.

The right to manufacture in China seems to give our merchants and capitalists an opportunity of inaugurating a better state of things. I have shown in section 5 what may be expected of Chinese labor under foreign superintendence. The value of China's exports would be greatly raised by partial manufacture, sorting and grading in China of many staples, such as silk, wool, hides, furs, paper, and tobacco. Much is now being done in this direction in Shanghai, in silk filatures, for instance, and something in Tientsin, Foochow, and Chinkiang. The increased value of these exports would add to China's capacity to take our imports.

And we ought, I believe, to encourage the manufacture in China of those products which we can not make at a profit in England, provided that we have in China an organization by which our manufacturers are informed of what the Chinese want to buy, and by which our goods are pressed on their notice. For this reason I can see no danger to Lancashire in the cotton spinning mills now being erected in China. Lancashire can not compete in coarse yarn with Japan and India, and the value created in China and not imported will enable the Chinese to buy more of our finer goods, our monopoly in the manufacture of which is not and can not under present conditions of cotton supply be threatened in China.

The arguments generally adduced against doing business and sinking capital at the outports in China are: The depreciation of silver; the difficulty of learning the language; native competition, and want of security.

In regard to silver, there is good reason to believe that capital fixed in manufactories, in land, houses, and godowns used in an active trade with gold-standard countries will keep their gold value; sudden fluctuations in exchange are, of course, embarrassing, but a low value of silver does not trouble merchants as such, and will favor the preparation of exports in China, as wages are likely to rise but slowly.

Native competition must bear heavily on Englishmen without capital, who, indeed, as independent merchants, can do little to forward their own or their country's interests in China, as things are at present, except in Shanghai. There are no rivals among the Chinese to be dreaded by rich firms and corporations, because the Chinese can not carry on large undertakings, and because Chinese riches are very fleeting. To succeed in China a foreign undertaking must be large and native undertaking small.

The difficulty of learning to speak the language has been greatly exaggerated. Excepting the neighborhood of the coast between Shanghai and Canton, one language is spoken over the length and breadth of China. We heard the same language spoken in the streets from Chinkiang to Liu Chow in Kwangsi. This language is Mandarin—with variations slight, considering the huge extent of country. All that is necessary for a merchant is that the recruit selected at home for his business capacity should be required to learn enough colloquial Chinese to talk about a very narrow range of subjects. For this, the only difficulty is the pronunciation, to master which some perseverance is required. My companion, Mr. Bell, picked up easily, without any study, in six months enough Mandarin to make himself understood on everyday subjects. In China a clever and determined youth would learn enough in a year to be useful, doing his ordinary work meantime; to make a Chinese scholar of him would be to ruin him, in all probability, for purposes of trade—it would take more of his time than he could spare.

In regard to security, foreign life and property is almost as safe in the richer provinces of China as in England.

Perhaps the thread of my argument has not been very clear, and I would, therefore, recapitulate its tenor, as follows:

In order to improve China's demand for our imports, her exports must be increased in value, and this can best be done by Englishmen living in settlements, like that at Shanghai, at suitable places in the interior, who, while managing steam shipping and developing the export trade, could at the same time distribute imports and be ready to engage in mining and engineering enterprises as the opportunity offered. Rich men will not live in the outports, and poor men can not make a living independently; therefore the work must be done by rich firms or corporations able to wait and train in the Chinese spoken language and mercantile customs youths selected in England for their business capacity. In ten years such a system would give us a hold over the foreign trade of China that the present methods can never do.

It may occur to an Englishman unacquainted with the east, that such a programme is much too far-reaching, and that the Chinese can be trusted shortly to enter upon the path of progress when our existing agencies in Shanghai and Hongkong will be quite sufficient links of foreign trade. This is the view which has brought our trade into its present condition of deadlock; it is based on a much too sanguine estimate of Chinese institutions and character. It is not that the Chinese will not progress in the modern sense, but that they can not. They have not the institutions, the laws, or the character on which to base the elaborate structure of modern commerce. The analogy from Japanese progress is delusive; the Japanese had till recently a feudal system; they have an aristocracy, and a healthy social hierarchy based on a sound subordination; they are an organized body, and their leaders have made them a nation; the Chinese, although, individually, in physique and intellect, more than a match for the Japanese, have none of these things, nor the least desire to attain them.

Therefore it is better to base our hope of future development of foreign trade in China on Englishmen living in the country and pursuing their own interests; when they have achieved success, the Chinese will certainly try to follow in their wake.

THE COTTON INDUSTRY OF THE FAR EAST.

Probably of all the industrial developments which are taking place in Japan and China, the one which is likely to have the most direct results on the manufactures of India and of Britain, according to the Indian and Eastern Engineer, is that connected with the cotton industry.

The article in the above journal goes on to say that, in order to understand the nature of the evolution which has been going on in Japan for some years past, it must be remembered that spinning and weaving were the most important native industries. The returns for 1895 show that there were over one million weavers. Women spend all their spare time in spinning or weaving, and it is no exaggeration to say that, in nearly every house in rural Japan, the spinning-wheel and loom were kept going from morning till night. The introduction of steam and water-power is having the same effects in Japan as it had in Britain and India, and the domestic industries are being crushed out before the increasing factories, which, however, find a large supply of workers who are very deft in the manipulation of cotton, and who soon become skilled workers of machines.

The first cotton-spinning and cotton-weaving factory in Japan, in which steam power was employed, was that started at Kagoshima in 1865-67 by Prince Shimadzu, who was then daimio of the province. The machinery, which was imported from England, consisted of 6,000 spindles, and the object was to give employment to the retainers of the clan. Some years later another factory was opened by Prince Shimadzu in Sakai, Izumi Province. About 1880 a great impetus was given to the erection of cotton factories, and for some years past the progress has been very rapid, with the result that home-spun yarn is now almost unknown in the Japanese market at the present time. Not only is the home demand met to a considerable extent, but in certain departments the Japanese factories now compete with the goods imported into the far east from Europe and America.

The hope is expressed in Japan that cotton yarn will become one of its most important products in the markets of the east in the future. Not long ago, at a meeting of the Oriental Society of Tokyo, the vice-minister of agriculture of Japan, after giving statistics showing recent progress, expressed the opinion that, in the near future, Japan would be able to wrest the bulk of the yarn trade of China from India and England, and sufficient progress has already been made to justify the position of affairs in Japan being carefully studied by British and Indian manufacturers.

It is still too early to say much regarding the position and prospects of the cotton industry in China, but as three of the foreign-owned cotton mills in Shanghai, which commenced working in 1897, have recently published their first reports and balance sheets, it will be interesting to note a few points in them. The average cost of a 40,000 spindle mill may be set down at about a million and a quarter taels (say £160,000). None of the establishments, whose reports have been published, have yet attained their maximum capacity, the best result shown being 34,000 spindles working night and day for eleven weeks; but notwithstanding this fact, dividends, varying between 3½ and 7 per cent, have been declared. Moreover this result has been obtained with labor that is practically unskilled, very few trained hands being obtainable at the outset. Three women are required to do the work at a frame which in England would be superintended by one operative; but as the managers report that the quality of labor is steadily improving, and the supply thereof is unlimited, this factor is likely to disappear in time. Under present conditions, if we take the total wages of three women per day of eleven hours at 90 cents (about 1s. 9d.) and allow the output per frame to be 25 per cent less than that obtained in Lancashire, the conditions of manufacture are still considerably in favor of the local mills. The yarn produced by the Shanghai mills is found to be superior both in color and in quality to that of Bombay and of Osaka, selling at three to five taels higher than either of these per bale of 400 pounds. The present price of local yarn varies between 70 and 78 taels per bale according to count.

It is quite evident, however, that the foreign capitalist is not going to have it all his own way, as the Chinese are now eagerly investing their money in cotton mills. When discussing the prospects of Japan-made cotton yarn capturing the China market, Mr. Brennan, His Majesty's consul at Canton, arrives at the conclusion that it is more probable that, while Osaka and Bombay are competing for the prize, the Chinese operative will arise and seize it for himself. Whatever may be thought of the future action of the Chinese operative, it is quite evident that the Chinese capitalist is awaking to the importance of industrial undertakings as means of making money. A month or two ago, the North China Herald published a list of the cotton-spinning mills in Central China, which were chiefly owned by Chinese, and it showed that 378,052 spindles were running and 525,252 projected in these establishments, which, considering the short time since they were started, is very considerable progress.

[For value of standards of currency, weight, and measure, see page 2256.]

It is still too early to say much regarding the effects of the development of the cotton industry in the far east—so much depends on the economic and industrial conditions; and as these are changing very rapidly, opinions on the subject are likely to vary according to the point of view from which it is looked at. Meantime, all that can be done is to observe carefully the conditions which are being evolved in the far east, and gradually it will be possible to form conclusions as to the effects which they are likely to have on British manufacturing industry.

COTTON SPINNING IN CENTRAL CHINA.

The following table, showing the present status of the cotton-spinning industry in central China, is taken from the North China Herald of January 28 last:

MILLS IN SHANGHAI.	SPINDLES.	
	Projected.	Running.
	<i>Number.</i>	<i>Number.</i>
The Ewo Cotton Spinning and Weaving Co., Ltd.	100,000	29,600
The Laou Kung Mow Cotton Spinning and Weaving Co., Ltd.	25,000	25,000
The International Cotton Manufacturing Co., Ltd.	45,000	34,000
The Soy Chee Cotton Spinning Co., Ltd.	40,040	40,040
The Hua Sheng Chong Cotton Cloth and Yarn Co.	65,000	65,000
The Ta Sheng Chong Cotton Cloth and Yarn Co.	25,000	25,000
The Yah Loong Cotton Spinning Co., Ltd.	20,000	18,000
The Chinese New Cotton Spinning Co.	15,000	15,000
The Yu Yuen Cotton Mill.	40,020	40,020
	375,060	289,660
MILLS AT OUTPORTS, ETC.		
Tung Kau Yuen Mill, Ningpo.	10,000	10,000
Hupei Government Cotton Mill.	30,000	30,000
Wuchang Cotton Mill.	50,000	20,000
Soochow Cotton Mill.	30,000	18,200
Wusieh Cotton Mill.	10,192	10,192
Hangchow Cotton Mill.	20,000
Total in Central China.	525,252	378,052

WOOLEN MANUFACTURING IN CHINA.

Consul Read, of Tientsin, under date of January 5, 1897, says a woollen mill is soon to be erected in Tientsin, on the river bank just below the foreign settlement. On making inquiries, Mr. Read learned that the complete plant for this mill was purchased from the Danish Oriental Company, Limited, of Copenhagen, which firm has a representative in Shanghai, who made the agreement. The machinery purchased by the Danish Oriental Company was made in England and cost about 300,000 Tientsin taels (\$230,000 United States gold). The present customs taotai of Tientsin, Li Mingsam, is interested in this mill, adds Mr. Read, as is also, I understand, Sheng, the director-general of the imperial railways. As soon as the machinery arrives, in the spring, building operations will be begun. This mill will begin to deal with about 10,000 pounds of wool per week, which will yield about 50 to 60 pieces per day of camlets, lastings, long ells, etc.—goods similar to those now imported. Arrangements have been made to extend the mill for cotton spinning with 10,000 spindles and 100 looms, but this is not likely to occur until the woollen mill is in good working order. The output of this mill is to be taken by the army; hence the officials interested will, no doubt, have a large profit on the capital invested.

MONEY, WAGES, AND PRICES IN CHINA.

[From a report by United States Minister Denby in 1896.]

I.—STANDARD OF VALUE.

No standard of value and no unit of value are established by law in China. The money of the country consists of gold, silver, copper, and paper. Gold and silver are commodities which circulate by weight. The ratio of value between them fluctuates constantly.

Copper is coined into small coins, about 1,260 of which are worth one Shanghai tael, or ounce, of silver, Shanghai weight, the Shanghai tael being now worth 73½ cents United States currency. The real standard of value in China for small transactions is copper, which has been used many centuries in the payment of wages, in the purchase of food, etc. The stability of the copper currency is accounted for by the fact that the goods it is employed to represent commercially remain just what they were year by year. Rice and wheat are brought to market every season after the employment of the same amount of labor and skill on the part of the farmer, and their value is practically measured by the same amount of coin.

In practice, silver by weight is the standard for all commodities bought in large quantities, interchanged between provinces, or imported from abroad.

The standard of value in China is therefore copper coin locally and for small transactions, silver by weight for larger commercial transactions and trade between distant places.

The commercial supremacy of Shanghai makes the Shanghai tael, or ounce, practically the standard for other places. It is 513.0572 grains silver fine, and its actual present value, London exchange, is 2s. 11.1715d. (71 cents).

II.—AMOUNT IN CIRCULATION.

No statistics exist as to the amount of money in circulation, and no estimate can be made. No paper money is issued by the Government. No provision is made by law for the redemption of the paper notes of the private banks. Their circulation rests on the credit of each bank.

III.—PER CAPITA CIRCULATION.

The amount of money in circulation per capita can not be ascertained.

IV.—CHANGES IN THE SYSTEM.

There has been no change in the monetary system of the country in recent decades, nor has there been any abandonment or curtailment of the use of silver or paper currency. Mints have been established by imperial decree for the coinage of silver dollars and subsidiary silver coins. These circulate at their value as bullion in the cities of China. On account of the greater convenience of coined money, the tendency is to its wider adoption.

V.—CURRENCY AND WAGES.

It is noticeable that while silver has depreciated abroad, its purchasing power in China for articles of domestic production and its value for the payment of wages have not diminished. The appreciation of gold abroad, enhancing the cost in silver of manufactured articles, has tended, however, to stimulate the manufacture of such articles in China. This is particularly noticeable in the cotton trade, and the same cause will produce like effects in other industries. The wages of skilled and unskilled labor have not been increased, but the creation of manufacturing industries has opened a new field to labor, the greater extension of which may lead to higher wages.

The actual rate of wages in China seems small to one unacquainted with the cheapness of the necessities of life here and unfamiliar with the narrow scope of a Chinese laborer's needs. Agricultural laborers are paid in copper the equivalent of about \$1.50 to \$2 United States currency per month. Unskilled laborers in the city are paid about 2½ cents per diem and supplied with two meals. Skilled carpenters receive 20 to 30 cents per day, masons and painters the same, domestic servants \$3 to \$10 per month, hostlers \$3 per month. In all branches of labor it is difficult to give exact figures. The minimum at which a laborer can be hired is the actual cost or the most frugal subsistence.

VI.—PRICES.

It is not practicable to answer in detail the interrogatories under this paragraph without great delay. The statistics of the Chinese Government are not published in a form to make them available for the purposes of the circular. Accurate and reliable information on the subject can only be obtained through some mercantile source at Shanghai.

In general, it may be said that prices have not been affected by tariff changes, as there have been no tariff changes for more than ten years, nor have they been affected by Chinese financial or currency laws, as none of importance have been enacted. Articles produced in China have not felt the depreciation of silver, while articles imported from gold-standard countries have largely increased in their silver value as compared with ten years ago.

The customs statistical secretary, in his report for 1895, makes a comparison between the two halves of the decade 1886-1895. After saying that the demand for foreign cottons improved in 1895 over the preceding year, he adds:

"But to determine whether the trade has really developed concurrently with enhanced prices, the enormous consumption of yarn, and the opening of new markets, it is necessary to compare the total offtake of principal cloths during the first and second half of the decade, and the result shows that there has been a significant decline in the importation of cottons specified hereunder:

DESCRIPTION.	1886-1890.	1891-1895.
Shirtings:	<i>Pieces.</i>	<i>Pieces.</i>
Gray	29,836,000	29,973,000
White	11,930,000	11,213,000
Tea cloths	10,851,000	8,709,000
Drills:		
English	1,742,000	1,117,000
American	2,802,000	3,156,000
Sheetings:		
English	3,003,000	3,440,000
American	6,359,000	6,276,000
Total	66,613,000	60,884,000

"The increased cost of cotton goods is accountable for this annual shrinkage of over a million pieces, and as an instance of the enhanced price which the consumer has to pay for British and American cottons, owing to the fall in the gold value of the tael, one example, taken from Mr. G. W. Noel's market report of December 20, last, giving past and present quotations, will suffice. It is there shown that at the close of 1886, with exchange at 4s. 6½d. (\$1.09) and cotton in Liverpool at 5½d. (11 cents) per pound, a Chinese could buy at auction in this market an assortment totaling 17 pieces of standard chop a shirtings, tea cloths, jeans, sheetings, and drills at a cost of 31.85 taels (\$23.41), whereas the same goods in 1895, with exchange at 2s. 11d. (71 cents) and cotton at 4½d. (9 cents) per pound, would cost 40.71 taels (\$28.62), or an advance of over 27 per cent."

He goes on to say that no trade has suffered so much from the rise in the silver price of gold as the trade in metals.

He says: "In 1891, when the Haikwan tael averaged 4s. 11d. (\$1.19), the aggregate weight of all kinds of metals demanded by this market reached 2,203,000 piculs (291,059,800 pounds), but under the influence of low exchange the total quantity landed has dwindled to 1,550,000 piculs (206,615,000 pounds) in 1895. Importations of iron of all descriptions—bar, hoop, wire, pig, and old scrap—amounted in 1891 to 1,726,000 piculs (230,075,800 pounds), whereas, at present high prices, 1,071,000 piculs (142,764,300 pounds) fulfilled the requirements of the year. For old scrap iron, which always constituted the bulk of the importations, there was a large and almost limitless market, and in 1891 deliveries reached 859,000 piculs (114,504,700 pounds), but the appreciation of gold appears to have so effectually stunted this traffic that consumption is reduced to 413,000 piculs (55,052,900 pounds), or more than 50 per cent less than the demand five years ago."

The low exchange value of silver has also greatly stimulated exports in some lines. For example, in 1885 the export of silk and satin goods, including pongees, only attained 10,280 piculs (1,370,324 pounds), as compared with 23,120 piculs (3,081,896 pounds) in 1895. The same cause largely accounts for the increase in the export of skins. The growth of this trade, fostered by the depreciated gold price of the tael, has been from 881,000 Haikwan taels (\$1,001,697) in 1891, to 2,649,000 (\$2,119,200) in 1895.

VII.—WHETHER MINTS ARE OPEN TO BOTH METALS.

The mints of China do not coin gold. They are not open to the unlimited coinage of silver, but they coin annually a sum decided according to circumstances by the officials in charge.

EFFECT OF RECENT DEVELOPMENTS UPON WAGES AND COST OF LIVING IN CHINA.

The American consul-general at Shanghai, in a recent report to the State Department, discussing wages and prices in China, says:

Trades unionism has for ages been firmly established in China. It receives official recognition; its rules are stringent; it is tenacious of its privileges. But human hands are all too plentiful and human life is cheap, so that it comes to pass that many skilled mechanics receive but 15 cents Mexican a day, while master workmen get 20 to 25 cents, and the common laborer saves himself from starving on two Mexican dollars a month. These wages must be cut almost in half for expression in United States money. Frequently there are wives and children to be supported, too; but in the poorest families these members frequently find employment in some of the minor industries, the women, perhaps, in the manufacture of shoe soles, the children in making paper money for offerings to the dead, or, as in Shanghai, in the manufacture of match boxes, and so the slender earnings of the husband and father are eked out. A gradual introduction of some Western industries—the building of railways and other improvements in communication, the opening of mines, and the development of the other resources of the Empire—will no doubt improve matters to some extent by giving a better market to the productions of China, by diverting labor from overcrowded channels to new enterprises, and by creating a greater demand for labor, which will somewhat improve the wages. But as things are at present we can not view with indifference the prospect of bringing the products of our own wage-earners into competition with these cheap toilers.

How the masses of China can live on the wages paid will appear from the following table, in which the present retail prices of some of the commoner articles are given in Mexican silver:

MARKET PRICES AT SHANGHAI OCTOBER 30, 1896.

ARTICLES.	Price.	ARTICLES.	Price.
Beef.....per pound..	\$0.08	Marrows.....per pound..	\$0.02
Pork.....do.....	.14	Onions.....do.....	.06
Fish.....do.....	.10	Rice.....per picul..	4.00
Eggs.....per dozen..	.12	Bean oil.....per catty..	.09
Cabbage.....per pound..	.03	Peanut oil.....do.....	.10
Carrots.....do.....	.02	Flaxseed oil.....do.....	.14
Celery.....per dozen..	.12	Bean curd, per cake.....do.....	.002

NOTE.—One picul=33½ pounds; 1 catty=1½ pounds.

a The word "chop" here means brand or trade-mark.

[For value of standards of currency, weight, and measure see page 2256.]

These are the published prices, but natives do not ordinarily pay as much as is here represented. These prices are somewhat higher than prevail outside of treaty ports, as the wages paid in Shanghai are also better than those received in the interior. The poorer families can not, of course, afford to eat meat often. Some will eat it twice a week; these are fortunate. Others count it a luxury to have meat once or twice a month. The vegetables are cooked in vegetable oil, so that even when there is no meat, the food is savory and a certain amount of fat is obtained. Beans, too, are in a measure a substitute for meat. They are eaten in the form of bean curd, costing about 2 cash, or one-ninth of a cent in our currency, for a small cake that will suffice for one person at a meal. The poorest of families will live on 50 cash apiece per diem, which, at the present rate of exchange, is about 3 cents.

The prices of native food stuffs measured in silver have remained about steady at Shanghai for the past ten years. The published lists indicate in other staples only such changes as would be expected from changing of season and local supply. Inquiries farther inland have elicited reports showing that prices of all articles have risen slightly, even when measured in the ordinary copper currency, the cash. The advance is of course still more noticeable in silver. A Mexican dollar in 1886 exchanged for 1,050 to 1,090 cash; in 1896 it has brought but 910 to 940. There has been perhaps some appreciation in copper, but probably more depreciation in silver. The heavy imports of silver, rising from 7,860,000 taels in 1890 to 40,550,000 taels in 1895, and the coining of considerable sums at the new mints established at Canton and Hankan may have had some effect upon the exchange.

The prices of foreign imports from gold-using countries have of course greatly increased since the fall of silver. In this connection it may be noted that foreign residents in the far East do not receive much benefit from the low prices of native goods, since their food and clothing are largely imported from the West. The cost of living for the foreigner has increased within the last ten years very considerably, keeping pace, or very nearly so, with the appreciation of his drafts if he be paid in gold, and reducing him to straitened circumstances if paid, as many are, in the silver currency of the country. In Shanghai another cause has operated to greatly augment the expenses of living—the rapid growth of the settlement and the consequent rise of rents.

That there has been a considerable advance in the price of native products will appear from the following table, showing the fluctuations of 17 staple articles of export, the prices prevailing in 1870–1874 being taken as 100. It must be noted that in these articles there has been a decided decline in the total average price from 1886 to 1895.

VARIATIONS IN PRICES OF STAPLE ARTICLES OF EXPORT FROM SHANGHAI FROM 1870–1895.

[Average prices 1870–1874=100.]

Rhubarb.....	100	115	94	109	106	109	107	94	108	98	87	80	80	82
Wheat.....	100	104	107	102	133	109	109	109	109	132	118	109	121	119
Total.....	1,700	1,671	1,787	1,780	1,815	1,659	1,641	1,629	1,582	1,631	1,627	1,733	1,857	1,972

The decline in the value of the tael or the ounce of silver is shown by the figures given below. The tael is not coined. It is a measure of weight, and represents $1\frac{1}{2}$ ounces avoirdupois.

1886.....	\$1.22	1891.....	\$1.20
1887.....	1.20	1892.....	1.07
1888.....	1.15	1893.....	.96
1889.....	1.15	1894.....	.77
1890.....	1.27	1895.....	.80

It may be a matter of interest to compare the rise in prices here with that which has taken place in the neighboring Empire of Japan. Representing the prices prevailing in 1873 as 100, we have the following table:

1873.....	100	1881.....	114
1875.....	106	1885.....	119
1876.....	105	1886.....	115
1877.....	107	1888.....	119
1878.....	109	1889.....	125
1879.....	111	1890.....	133
1880.....	106	1891.....	131
1881.....	100	1892.....	131
1883.....	108		

Comparing this table with those for China and all with the table of exchange for the tael, it will be noted that the variations in the prices of the two countries have differed very decidedly. In the case of the cottons imported into China, however, the prices have closely followed the fluctuations in the silver market.

Cotton pickers	per month.. 5. 00	Salesmen (with board)	per month.. 4. 00
Cotton cleaners	per day.. . 20	Stewards of vessels	per year.. 120. 00
Cotton spinners (female)	do.. . 10	Tea pickers	per day.. . 10
Cotton weavers	do.. . 20	Tea sorters	do.. . 10
Clerks (with board)	per month.. 5. 00	Tea firers	do.. . 30
Cooks	do.. 5. 00	Tea packers	per month.. 8. 00
Dyers	do.. 8. 00	Tailors (with board)	per day.. . 14
Embroiderers	per day.. . 30	Umbrella makers	do.. . 20
Farmers (with board)	per month.. \$3. 00 to 4. 00		

The above rates are paid by Chinese masters.

SERVANTS FOR FOREIGN HOUSEHOLD ARE AS FOLLOWS:

Occupation.	Wages.	Occupation.	Wages.
Boy (head servant)	per month.. \$6. 00 to \$12. 00	Chair bearer (seldom employed by the month)	per month.. \$5. 00 to \$8. 00
Cook	do.. 8. 00 to 14. 00	Tailor (ladies', to work in house)	per day.. . 37
Coolie	do.. 5. 00 to 7. 00	Nurse	per month.. 5. 00 to 10. 00
Boatman (seldom employed by the month)	do.. 6. 00 to 9. 00		

Consul Gracey, of Foochow, writing in October, 1897, said:

The wages of the common people are very low. The laborer of the coolie class can be hired for from \$1.50 to \$3, Mexican, per month, equal in American currency to from 75 cents to \$1.50; good mechanics for 20 to 30 cents per day, equal to from 10 to 15 cents gold.

The wages of the laboring classes have not materially increased in this province since 1890, when the Mexican dollar was quoted at 94 cents. Neither have native products largely increased in value, although the Mexican dollar is quoted at 45 cents and the price of all foreign products sold in this market has nearly doubled.

BUSINESS AND INDUSTRIAL CHANGES IN CHINA—INTRODUCTION OF RAILWAYS, STEAM POWER, AND MODERN MACHINERY, AND THEIR EFFECT.

[Consul-General Jernigan, in Commercial Relations, 1895-96.]

There are evidences of great industrial changes in China. The introduction of foreign machinery and the building of railways can not but create an entire revolution in methods of manufacture and distribution. There are other and far reaching changes—social, political, moral—that will probably follow in the wake of the industrial revolution, but these are not relevant to a trade report. In two or three branches of trade the change has already begun. This has been the effect chiefly of the Shimonoseki treaty between Japan and China, since the ratification of which ginning mills, weaving mills, and silk filatures have been springing up as if by magic in Shanghai and vicinity, and this flourishing port seems destined to become an oriental Lowell. At the beginning of 1895 there were already a half dozen native steam cotton mills, with 105,000 spindles, in operation in Shanghai, and 30,000 more spindles were in process of construction. Besides these, four foreign companies—three English and one German—were floated and began at once the erection of mills with a total of 145,000 spindles. In addition to these, two Japanese mills were planned, but for reasons hereafter given were abandoned. The native mills spoken of had been running night and day the whole year round, and were understood to be paying large profits. During 1894, 180,000 bales of Indian yarn were imported for their use, at 10,000,000 taels (\$8,000,000). Since the beginning of 1895 much yarn has been imported from Japan also, at 72 taels per bale—4 taels more than was paid for the Bombay article. This Japanese yarn was made almost wholly of Chinese cotton which had paid export duty going to Japan, and which paid import duty as yarn on its return. Yet the manufacturers could employ it at a profit. This shows very plainly that if China could make her own yarn, as she will do, she would be able to produce cotton goods at a price which will defy competition, for there is practically an inexhaustible supply of labor at wages on which American employees would starve, although these wages are not so low at Shanghai, by any means, as those that prevail in other parts of China. On the contrary, they are so much better than the usual wages paid in the interior as to attract men and women from distant homes to seek employment here, and that in a land where ties of family are of the very strongest.

Beside the weaving mills, a large number of ginning mills, too, have been built. Eight of the largest of these operate between 500 and 600 gins, mostly of Japanese construction. But there are, besides these, multitudes of Chinese who work a small number of these gins by hand power in their own homes. To anyone who has seen the primitive method of preparing the cotton which prevails generally in the interior the change is most marked. All of this is tending to stimulate the production of cotton, and unless the Government ruins the enterprise by unwise legislation, the planting and manufacture of cotton must greatly increase the wealth of this district and furnish considerable revenue to the state. From this port alone there was exported to foreign countries in 1895 raw cotton valued at nearly 10,000,000 taels.

Equally successful has been the introduction of the steam silk filatures, of which there are now no less than twenty-five in operation at Shanghai, with a number of others in process of construction at the newly opened ports of Hangchow and Soochow.

Four or five years ago there were but two or three all told. Those now in operation contain over 8,000 bassines, with a producing capacity of 14,000 bales, or 1,866,666 pounds, per annum. The effect of introducing this new method of reeling silk will be no doubt to greatly encourage silk raising. Formerly the cocoons were reeled within ten days after the worms had done spinning, else the moths would hatch out and the silk be spoiled. This was done by putting the cocoons in a kettle of boiling water and catching up the ends of a half dozen at once, which were then reeled off by hand on a rude wheel. The production of silk under such circumstances was limited. By the new process the cocoons are baked or kiln-dried on the spot where they are purchased, and stored to be reeled as they may be needed. By the employment of this method there need be no limit to the production of cocoons, save the supply of mulberry leaves. In the vicinity of Shanghai the natives themselves are learning how to bake the cocoons so as to kill the pupa, and can henceforth give their attention wholly to the rearing of worms, leaving the reeling to be done entirely by foreign machinery, which produces a much better thread than can be obtained by the old process. The cost, too, is somewhat cheapened. Good silk can be bought at Shanghai now from \$1 to \$2 Mexican, or 50 cents to \$1 United States currency, per yard.

Steam filatures are also in use at Canton, where, in 1895, out of a total of 24,375 piculs of fine and thrown silk exported, 20,779 piculs were steam filature products, valued at 7,569,884 taels. The silk trade at that port has been growing steadily. In the decade 1886-1895, the export of fine and thrown silk grew from 19,406 to 24,375 piculs.

Reference was made in another part of this report to the decline of the tea trade at Foochow. There is now a fine prospect of reviving this once most flourishing industry, and making the Foochow tea a strong rival of the India and Ceylon teas, which have so largely supplanted those of China. This change, too, is to be brought about by the introduction of foreign machinery. A prominent merchant of Foochow made a visit to India and Ceylon with the object of studying the methods of treating tea there, and on his return imported a tea-rolling machine. To avoid the exasperating interference of the mandarins, the machinery was not all brought into the factory at one time, but carried up in pieces at odd times, without exciting suspicion, and after being placed together a good quantity of tea was put through the new process with most gratifying results. A company has been formed to prepare tea by this improved method, and if the mandarins do not "squeeze" the life out of it, the new industry will flourish. At present, however, the export duty, which amounts to some 40 per cent of the annual value, makes it all but impossible for dealers to compete with those of India and Japan.

Mining has been carried on for ages in China, but after a very primitive fashion. The mineral resources of the Empire are rich and varied. It only needs foreign engineering skill and foreign machinery to make these treasures available. In recent years some foreign machinery has been used in mining coal, but not to any remarkable extent. Orders have been given in several places within a few months, however, for such machinery, and now that an era of railway building has begun, there is no doubt that there will be, in the near future, a great development of mining interests in regions which have hitherto been practically inaccessible.

The attempt to establish iron mills at Hanyang, on the Yangtze, so far has not met with much success, but the demand for railway materials will doubtless give new life to the enterprise; and there is no reason why it should not, in competent hands, prove most profitable. Mention has already been made of the organization of a company to undertake woolen manufacture at Tientsin. The affair is still in an embryonic condition.

As it was by virtue of the Shimonoseki treaty that foreign machinery was admitted into China, the comments of a leading foreign journal of the East, the Japan Mail, will be of interest in connection with the commercial treaty between China and Japan, the consequence of the Shimonoseki treaty. Editorially, the Mail says:

JAPANESE-CHINESE TREATY.

The new treaty between China and Japan secures to the latter power all the privileges enjoyed by the most favored Western nation having treaty relations with China. The treaty is more complete than any of those already existing, inasmuch as it embodies various provisions which, in the case of other countries, appear not in their original treaties with China, but in subsequent conventions. This remark applies to trading passports and, above all, to the much-vexed question of *likin*. After endless complaints from foreign merchants and long negotiations with the Government in Peking, arrangements were ultimately concluded guaranteeing exports and imports against domestic taxation greater than one-half of the customs duties. In other words, it was agreed that an article of foreign produce or manufacture might be carried from its port of arrival to any market in the interior of China on payment of a tax equal to one-half the duty levied on it by the customs; and that an article of Chinese produce and manufacture purchased in the interior of China might be carried to a place of export on payment of one-half the duty leviable on it when leaving China. These provisions as to "commutation taxes" appear in the body of the new treaty. It is also worthy of note that the Japanese negotiators have been careful to provide against all obscurity as to the duration of the treaty. The vagueness that disfigured Japan's treaties with foreign powers in this respect was responsible for a situation that all must be anxious to avoid in future. The new treaty is to run for ten years, certain, at the end of which time either of the high contracting parties has the right to demand a revision; but if no such demand be made nor revision be effected within six months from the termination of the ten-year period, then the treaty and tariffs are to remain in force without alteration for ten years longer. The most noteworthy changes, however, are embodied in the eleventh article. Hitherto the mercantile privileges secured to foreigners under treaties with China or Japan have been personal, not national. Thus, articles imported or exported by the subjects or citizens of such and such powers were to receive such and such treatment, the articles being distinguished by the nationality of their exporters and importers, not by the country from or to which they were carried. The new treaty, however, provides distinctly that "the tariffs and tariff rules shall be applicable to all articles upon importation into China by Japanese subjects or from Japan, or upon exportation from China by Japanese subjects or to Japan."

The words here italicized indicate the new departure. Another innovation is that freedom of importation and exportation is greatly extended, inasmuch as the treaty provides that all articles not expressly limited or prohibited by the tariffs and tariff rules may be freely imported into and exported from China. As an example of the working of this provision, the case of machinery may be instanced. The fact that machines and machinery were omitted in former treaties furnished to the Chinese a pretext for refusing to allow their import. All limitations of that character are now finally precluded. It is further to be noted that the tariff guaranteed to Japan by this treaty is the tariff now in force between China and Western powers. Thus no change can be made in that tariff unless Japan is a consenting party. On the other hand, Japan recovers complete tariff autonomy vis-a-vis China. She also recovers judicial autonomy. In those important respects the treaty is not reciprocal. As for additional and generally enjoyable privileges secured by the treaty, they seem to be, first, the nonexclusive character of the schedule of importable and exportable articles, as noted above; secondly, a greatly improved system of customs drawbacks; and, thirdly, provision for the establishment of bonded warehouses. The drafting of the treaty is incomparably superior to that of any of its predecessors, and is evidently the work of men familiar with all the difficulties and misunderstandings due to the inexperience or ignorance of previous negotiators.

Not the least important feature of the treaty is the omission of any reference to the manufacturing privilege secured by the Shimonoseki negotiators. Japan has, in fact, waived that privilege so far as concerns China's right to tax articles manufactured by Japanese subjects within her territory. We have already commented on this subject, and need not again refer to its significance and probable consequences.

The comments referred to in the closing paragraph of the Mail's editorial appear to be also of special interest in this connection. The Mainichi is a Japanese journal, and its views on Japan's surrender of the privilege of free manufacture in China is made the subject of the following summary by the Mail:

The Mainichi gives a very clear exposé of the relative circumstances of the spinning industry in Japan and China, especially with respect to Japan's recent surrender of the privilege of free manufacture. Our contemporary's purpose is to prove that the abandonment of that privilege really confers a substantial benefit on Japanese spinners and enables them to compete successfully with spinners working in China. Those that seek, writes the Mainichi, to minimize the advantage accruing from the excision of the free-manufacture clause and the consequent imposition of a tax by the Chinese Government on goods manufactured by natives or aliens within its own dominions, hold that even if an impost of 10 per cent be levied on commodities in China, Europeans and Americans will not be deterred from investing capital in the shipping industry, since they are contented with a narrow margin of profit, say 5 to 7 per cent. Thus they can compete with success against Japanese spinners. Our contemporary does not, of course, maintain that the imposition of a 10 per cent duty will prove prohibitive to the foreign spinning industry in China, seeing that even the Osaka capitalists who declined from the outset to erect a mill in Shanghai are steadily proceeding with the enterprise. But it is certainly true that were no such duty imposed, Japanese producers of yarns would be entirely precluded from shipping commodities to China. There are in China seven mills, at which the spindles in operation and those to be newly added total 135,000 and 90,000, respectively. There are also seven other mills in course of construction, their spindles aggregating 255,000. In this latter figure the portion representing Japanese enterprise is only 60,000, the remaining 170,000 being the property of Western capitalists.

The Japanese are not so devoid of the spirit of enterprise as to shrink from starting industries in China or elsewhere, but everybody must admit that, other things being equal, no people carrying on business in a foreign land can reasonably hope to achieve the same measure of success as they would if working at home. Suppose, then, that China imposes a tax of 10 per cent on the spinning industry within her own dominions, how will the case stand as compared with the same industry conducted in Japan? According to information from most trustworthy sources, the spinning business in China, if free from all taxes, should give a net profit of 15.04 per cent, which will therefore be reduced to 5.04 per cent after the imposition of a 10 per cent tax. Turning to Japan, we find at present 57 mills, with

spindles aggregating 1,300,000, of which only 610,000 are in operation. During the last half year, after adding 12,071 yen to their reserves, these mills declared an average profit of 10.5 per cent. However, as various miscellaneous expenses must be incurred in shipping yarns to Shanghai, a Japanese mill can not expect to clear more than 9.57 per cent on the sale of its products to China. Even at that rate a clear margin of 4.53 per cent appears in favor of the Japanese producers—a margin sufficient to guarantee success in competition with producers carrying on business in Shanghai. If, as some estimate, the clear profit accruing on the spinning industry in China, after a tax of 10 per cent is deducted, amounts to 7 per cent instead of 5, then, in the same way, there remains on Japanese yarns shipped to China a margin of some 2½ per cent. Hence, the Mainichi concludes, the retrocession of the free-manufacture clause confers a substantial gain on the Japanese spinning industry.

These figures are very interesting so far as they go, but their value would much enhance by a clear statement of the reasons that enable cotton mills in China to realize a profit of from 15½ to 10½ per cent, whereas cotton mills in Japan yield only 10½ per cent. So far as we can see, the salient difference in the conditions under which the industry is carried on in the two countries is that, whereas the Chinese mills obtain their supplies of raw material in China, the Japanese have to carry theirs from China to Japan, so that the cost of the cotton is enhanced by export duty and freight. But, on the other hand, Chinese manufacturers have to pay freight and import, and it would consequently seem that neither side possesses any special advantage over the other—at all events, nothing to account for a difference of from 5 to 7 per cent in the net profits realized. It is evident that some explanation of this point possesses the greatest interest, for upon it seems to depend the relative capacity of Japanese and Chinese labor and organization for industrial purposes.

ASIATIC COMPETITION IN THE GREAT MANUFACTURING INDUSTRIES.

Consul-General Jernigan, writing from Shanghai to the State Department, discusses the question of Asiatic competition in the great manufacturing industries of the world, as follows:

Goods manufactured in India, Japan, and China are now in the Asiatic markets, but are as yet too imperceptible to affect the sum total of the heretofore usual sources from which importation has been made. The competition from the manufacturers of India, Japan, and China is not so much to be feared in our home markets as in the Asiatic markets. China and Japan can not manufacture goods that will seriously compete in our markets with our manufactured goods. The laborer of the United States would very justly refuse for his labor the depreciated currency the Asiatic laborer receives for his labor, nor would the former be content to wear the clothes of the latter, but the day is not far distant when the products of Asiatic labor will, to a material extent, supply the demands of the Asiatic markets, and it is in Asiatic markets that the competition will be first encountered. It is the demand for cheap clothes in China that will enable cheap labor to supply such a demand. The energy and skill of the American laborer fear no rival in his home markets, but a new civilization is lighting up China, and competition in Chinese markets for our manufacturers will be one of the consequences. I have not failed to consider that civilization will increase the wants of the Chinese, but their progress may enable them to supply their wants. It is, therefore, Chinese competition in Chinese markets that is first to be feared, and not so much in our home markets.

The success which has attended the cotton mills at Shanghai within a few years past has stimulated the formation of companies for similar enterprises elsewhere in China. The Japanese seem to have taken alarm at the outlook, for, after securing the right in the treaty of Shimonoseki to manufacture goods in China without taxation, the prospect of thus injuring their home industries was the motive power that probably influenced them to grant to China in the recently established protocol to the commercial treaty the right to tax such manufactures, and the projected Japanese cotton spinning and weaving mills at Shanghai have been abandoned.

It is noticeable that our cotton goods find their largest sale in the three northern ports—Newchwang, Tientsin, and Chefoo—though quite an amount is distributed in the Yangtse Valley. This is probably due to the fact that they come into competition in these regions with none but the inferior quality of native goods, evidencing a preference for a somewhat better quality than the native manufacture. In the south, where cotton is grown more extensively and more attention is given to its manufacture, the Chinese are less willing to purchase the foreign manufacture, and this impresses the importance of studying closely their tastes with the view of conforming as near as possible in the interest of the extension of our trade. An English committee, appointed by the Blackburn Chamber of Commerce, is now in China prepared to spend a year or more in collecting information and finding new routes that will advance British trade. The example is worth the serious consideration of our own manufacturers.

American oil still maintains the first place in most of the ports under discussion, but in a few places, notably Kiukiang and Wenchow, there has been considerable decline in this item. At Kiukiang the import was 283,900 gallons as against 547,100 gallons for the third quarter of 1895 and 609,800 gallons for the second quarter of this year. At Wenchow there were but 3,000 gallons imported in the last quarter as against 38,000 in the second quarter and 60,000 in the corresponding quarter of 1895.

Much of this falling off is doubtless due, however, to the overstocking of the market, but at both these ports and some others, Russian oil has managed in some way, despite its poorer quality, to secure the lion's share of the trade. Even where the American oil has not lost ground, it has in many cases gained but little, owing to this competition. At Chinkiang, for instance, where the imports were 568,000, the Russian imports for the same period were 378,000 gallons, having attained this figure by a rapid and steady growth from 52,000 gallons in 1893. At Hankow the situation is still more striking. While American kerosene has declined since 1893 from 1,712,700 gallons to 1,241,120 gallons, the Russian oil in the same time has advanced from 142,000 gallons to 1,802,060 gallons. At Amoy a similar condition prevails, the total Russian import for this quarter being 471,120 gallons, more than double that of the American oil. At this latter port there is further competition from the Javanese product, as there is also at Swatow and elsewhere.

The influence of the cheap labor of Asia and its products upon future prices has become a subject of international importance, but the products of this labor in China in its competitive bearing upon the products of American labor is of more interest to us. The American laborer is very properly protected against the competition of the Chinese laborer on American soil, and such protection in no sense discredits the industry of the former; but whether the products of the Chinese laborer will seriously compete in American markets with the products of the American laborer is more the question of the hour. In this report I have indicated the belief that

competition is not so much to be apprehended in our home markets as it is in the markets of China for our home products, and the plain facts would seem to justify the belief. There has been and is now a valuable demand in the markets of China for the products of British and American looms, but when the desired quality of cotton goods at present imported from Great Britain and the United States can be manufactured in China from the products of her soil, it is unreasonable to expect the importation from foreign countries to continue in such large quantities; and when the products can be produced in necessary quantity on the soil of China and at a far cheaper price, as well as manufactured in China also at a far cheaper price, it is no longer a question that cotton made and manufactured in China will supply the demand of Chinese for cotton goods. It will; and it therefore follows that the competition will first begin in the markets of China. The prices—elsewhere given in this report—paid a Chinese laborer are starvation prices to the American laborer, but the price of Chinese food is in proportion to the price of Chinese labor, and the money is received and the food eaten with contentment. Another consideration tending to cause this competition to be more energetic is that the machinery in the cotton mills of China is of the most improved pattern, and that quality as well as the quantity of the cotton goods will enter into the competition. It is certain that there can be produced in China a much superior grade of cotton to that now produced, and with improved machinery Chinese cotton mills will be able to supply the demand for a finer quality of cotton goods as they are now supplying the demand for the more inferior quality.

It is probable that for years hence China will be more employed with her internal affairs than engaged in the extension of her trade relations with foreign countries, but if China would adopt a properly organized business system for the collection of the internal revenue of the Empire, there would soon be relief from the debt incurred as the result of the war with Japan, and commercial relations could be valuably extended. Japan must, as does Great Britain, look to maritime commerce as the source of her greatest wealth, and China, like the United States, is not only self-sustaining, but can be made rich by internal commerce, and, later, a formidable competitor on the sea and in the markets of the world. The soil of China is fertile, and Chinese are industrious and frugal, peaceably disposed, and natural business men.

TAXATION IN CHINA—RATES IMPOSED AND METHOD OF COLLECTION.

[From a report by the United States consul-general in China; Commercial Relations, 1896.]

One obstacle to the industrial and commercial progress of China is the irregular system of taxation which prevails. Aside from the import and export duties collected by the imperial maritime customs under the administration of Sir Robert Hart and his European and American assistants, there are other duties levied on nearly all goods, native or foreign, and levied repeatedly on the same goods, whether carried inland from the seaports or from the interior to the coast, or even from one town or city to another. These are the likin and octroi dues, which at present are exciting so much discussion. Every 8 or 10 miles along the principal waterways or caravan routes a likin station is found, where a tax is levied upon some article or articles carried through by boat, pack animal, or wheelbarrow. At some points every article is taxed. This is the usual rule at the gates of cities. In some cases the tax is as little as 2 per cent ad valorem; in others, such as silk, satin, and native opium, much more, amounting at times to 6, 8, or even 10 per cent. Between Shanghai and Soochow, a distance of 84 miles, there are 8 likin stations. At the first and last stations all goods are dutiable; at the rest all goods must be examined, and there is scarcely a single article that does not in that distance pay at least three taxes. It is easily seen that under such a system foreign goods can not be carried very far from the coast before their prices become prohibitive for ordinary people.

By article 28 of the Tientsin treaty of 1858 it was proposed to substitute for these likin dues a fixed tax of 2½ per cent ad valorem, payable at the ports where imports were landed or at the first barrier passed by exports in their outward journey, a certificate being granted to exempt the goods of any further charges. This provision has found but limited employment. Transit passes, except on certain main lines of traffic, did not protect the merchant against the exactions which long custom had sanctioned. Local and provincial authorities depended upon these collections for their support, and no provision seems to have been made to compensate them for their losses by appropriations from the Imperial treasury. The question has come to the front again in connection with the proposed revision of treaties. Since the war with Japan, China is burdened with a public debt amounting now to about \$200,000,000 gold. To meet the annual interest and other expenses connected with this debt, the sum of \$12,000,000 per annum will be needed. For such a large Empire as China these sums seem insignificant, but at present China's revenue, aside from likin dues amounts to about 56,000,000 taels, (\$44,000,000), viz:

	Taels.
Customs.....	21,000,000
Land tax.....	25,000,000
Salt gabelle.....	10,000,000
Total.....	56,000,000

The customs revenue is pledged to the debt; but when the interest on the debt and the expenses of maintaining the customs service are deducted, there remains from this source not more than 3,000,000 taels for the Imperial Government. This leaves some 38,000,000 taels (\$30,400,000) for the whole imperial administration, and it is quite evident that such a sum is altogether insufficient. It has been suggested that the customs duties should be increased, and the request does not seem unreasonable; but there is a strong feeling among foreign merchants, our own among them, that this increase should not be agreed to unless some definite arrangement be made for the abolition of likin. At the same time, it has been proposed to levy an extra tax on the products of all steam cotton mills and silk filatures, and this has called out a protest from the various chambers of commerce in China. A special committee of the Shanghai chamber has recently formulated its views on the subject. It is set forth that these mills are built under the provisions of the Shimonoseki treaty, which guaranteed them freedom from taxation; that the protocol of October 19, permitting the Chinese Government to tax the product of these mills was, in effect, an abrogation of one of the principal articles of the Shimonoseki treaty, and unfair to those who had acted in good faith upon the assurances therein given.

The Japanese Government, it is believed, found that untaxed mills in China would ruin existing industries of a similar character in Japan, and were quite willing to withdraw from the position taken at Shimonoseki, and gave their nationals due notice beforehand, so that the proposed Japanese mills at Shanghai were abandoned. The Shanghai chamber pleads that an industry of such manifest benefit to China as cotton manufacturing should be fostered by freedom from taxation. If this be impossible, the tax levied should not exceed the duty on imported yarn less the transit tax on the cotton used in the yarns to be manufactured at these mills, viz: Import duty on 3 piculs' yarn, 2.10 taels (\$1.68); less transit duty on 3 piculs 40 catties cotton, 0.60 taels (48 cents), or 5 mace per picul. The point emphasized is that as imported yarns pay duty only as yarns and not as cotton, so the native yarns should not be compelled to pay duty both as cotton and as yarns. It is also asked that on payment of this duty the goods shall have the same privileges as imported yarns and on payment of a further half duty be freed from all further exactions when sent inland. Similarly, raw cotton bought in the interior for the mills is to be treated as if an export and freed by one payment from all further akin; and it is suggested that this payment should go to the provincial authorities.

All cotton, whether native or foreign, imported to these mills, it is urged, should be admitted free of duty, or, if the duty be paid, it should afterwards be deducted on payment of full excise.

It is pointed out that in India and America, China's competitors in cotton raising, cotton is not taxed; and that in India and Japan, China's nearest competitors in cotton manufacturing, the product of cotton mills is not taxed. The inference is that to levy heavy taxes on the raw cotton and the manufactured product would make the industry unprofitable.

The governor of Chekiang recently proposed to levy a tax on seed cotton of 0.40 cent per bale = 2.65 taels on a bale of yarn. The proposal of certain members of the Tsung-li Yamen was that a tax of 10 per cent should be levied on the product of the mills. This would raise the tax on local yarns to 8.05 taels as against 2.10 taels on imported yarns, much to the advantage, therefore, of the foreign article. As Shanghai yarns at present are not taxed at all, the schedule proposed by the chamber would no doubt add a considerable amount to the revenue of the Government, while its moderate character would greatly stimulate the industry, and thus in the end the treasury would gain more than by a heavier tax.

BANKS, BANKING METHODS, AND RATES OF EXCHANGE IN CHINA.

[From Commercial Relations, 1896-97.]

The Hongkong and Shanghai Banking Corporation is the principal but not the only foreign banking corporation in Asia, as France, Germany, and Russia have banking institutions at Shanghai. The Hongkong and Shanghai Bank is a British corporation, and has its branch banks at nearly all of the open ports of Asia, and its officers are men of large experience, as is proved by the recent balance sheet submitted by the directors to the proprietors for the half year ended June 30, 1896. The net profits for that period, including \$312,780.12 balance brought forward from last account, after paying all charges and deducting interest paid and due and making provisions for bad and doubtful debts, was \$1,470,795.86. The influence of the Hongkong and Shanghai Bank is great in the interest of British trade, and its patriotic loyalty in fostering and promoting that trade merits high praise. The banking institutions of the other nationalities named are no less capable in thoughtful consideration of the trade of their nationals, but if there is one agency more than another that has strengthened British trade influence in China and enthroned it against the internal and external attacks upon the Empire, the Hongkong and Shanghai Bank is that one agency. Other European nations are beginning to realize that a bank is a primary element of business success, but America does not seem to comprehend the situation in Asia. In my first report on the trade relations between the United States and China, the attention of the business men of the United States was directed to the importance of establishing an American bank at Shanghai. If evidence were necessary to prove the influence of the United States upon the business of the world, the intense suspense of the business centers preceding the Presidential election is ample testimony to our greatness as a nation, and it is surprising that our business men do not utilize their acknowledged influence in Asiatic fields of business. During my residence of two years at Shanghai most valuable contracts have been made and negotiations carried on through the agency of the foreign banks at Shanghai.

In one transaction it is estimated that a bank here made a clear profit of \$2,000,000. It will be understood that Americans are placed at a disadvantage in their efforts to contract for the building of railroads and the internal development of China generally. Not only are our countrymen compelled to transact their mercantile business through foreign banks, but other contracts they may make necessarily, directly or indirectly, come under review or to the knowledge of such banks, which are naturally more interested in furthering the interest of their respective nationals, the business rivals of our countrymen.

The Chinese have a banking system, and, while conducted somewhat upon the general principles of banking, it is crude and unsuited to modern trade and enterprise. My own opinion is that there should be an American bank at Shanghai organized upon American principles and conducted after American methods and officered by American citizens. There are difficulties to the quick awakening of China, but these difficulties must give way before the civilization now so firmly rooted within her borders. The very conservatism of the Chinese encourages the belief that the Empire will be more steady in her step along the new highways of civilization, a step which the most conservative Chinese statesmen realize must soon be made.

In this report the value of Chinese foreign trade is given from the most authentic source, and even now it is great when only a few seaports are open to trade. The business man has only to look at the map to measure the value when China is fully opened to development. The field is inviting and the harvest likely to be valuable.

The equivalent rates of values for 1895 were the following: The haikwan tael, in which the customs revenue and all values are stated, is equivalent in English money to 3s. 4d.; in United States money to 80 cents; in French money, 4.11 francs; in German money, 3.31 marks; in Indian money, 2.94 rupees; in Mexican dollars, 1.53 at the average sight exchange on London, New York, Paris, Berlin, Calcutta, and Hongkong, respectively, for 1895.

The picul, in which weights are generally stated, is equivalent to 100 catties, or 133½ pounds avoirdupois or 60.453 kilograms.

The catty, in which weights are sometimes stated, is equivalent to 16 taels, or 1½ pounds avoirdupois or 0.60453 kilogram. The tael, in which weights are sometimes stated, is equivalent to 1½ ounces avoirdupois or 0.037753 kilogram.

[For value of standards of currency, weight, and measure see page 2256.]

SPECIAL BANK RATES.

[Shanghai sight draft on New York.]

1896.	Gold rate of taels.	Mexican dollars.	1896.	Gold rate of taels.	Mexican dollars.

RATES ON FIXED DEPOSITS.

London: May, 1895, for one, two, or three years, at 4 per cent; July, 1895, on new deposits, at 3½ per cent; on renewals at 4 per cent. Shanghai: August, 1895, for twelve months at 4 per cent; for six months at 3½ per cent; for three months at 2½ per cent.

The following are the banks established in Tientsin. They do a general banking business, receive deposits, discount local bills, and buy and sell foreign exchange:

Chartered Bank of India, Australia, and China. Head office, London. Correspondents, New York, Canadian Bank of Commerce,

Deutsch-Asiatische Bank. Head office, Berlin. Correspondents, New York, Messrs. Ladenburg, Thalmann & Co.

Hongkong and Shanghai Banking Corporation. Head office, Hongkong. Branches, New York and San Francisco.

Russo-Chinese Bank. This bank was opened in Tientsin on the 13th of January, 1897. Head office, St. Petersburg. Correspondents, New York, Messrs. Ladenburg, Thalmann & Co.

Exchange quotations in Tientsin taels are published daily by several brokers.

Currency values as given by the Hongkong and Shanghai Banking Corporation, in 1898, are as follows:

Exchange on London, bank bills on demand.....	1s. 10½d.
Credits, four months sight.....	1s. 10½d.
Credits, six months sight.....	1s. 11½d.
Documents, four months sight.....	1s. 11½d.
Hamburg credits, four months sight.....	1.96 marks.
New York, four months sight.....	47½ cents.

The "chop" Mexican dollar, which is used commercially at this port, is 3 per cent less in value than the clean Mexican dollar used in Shanghai and elsewhere, and is now quoted at 45 cents American currency. These values vary daily, and during the last three months have fluctuated between 42 and 47 cents American currency.

In 1890, says Consul Fowler in October, 1897, a Mexican dollar was worth by the mint valuation 92.3 cents; to-day it is worth 0.446. Then it cost me \$160, gold, to buy 100 Shanghai taels; to-day it costs only 60 gold dollars to buy that amount of silver; then we got 1,200 to 1,400 copper cash for 1 Mexican dollar; to-day only 850 to 870; thus, while the Mexican dollar has been getting cheaper to the foreigner, it has also been getting cheaper to the native, for the currency of China is the copper cash.

In 1890 I paid a servant 10 Mexican dollars a month wages, which cost me \$9.23, gold. For his 10 Mexican dollars he received 14,000 cash, out of which he paid his expenses; to-day he receives the same number of Mexican dollars (10), but they cost me now \$1.45, gold, and he receives but 8,700 cash at the most; thus we see the Chinaman is hit either way. The purchasing power of his copper cash has decreased as well as the silver value. It is strange, but true, that copper cash is more valuable as a metal melted down. A man can melt his cash into ingots and get more silver for it than he can as coin; he would do it, too, but the penalty is death.

The foreigners in the employ of the customs service of China are paid in haikwan taels—customs ounce of silver. In 1890 for every tael they received 1.53 Mexican dollars. To-day the haikwan tael is valued at 1.36 Mexican dollars, so the foreign official not only loses in the fall in the price of silver, but he actually gets less silver. On the other hand, the man who receives a gold salary pays from 40 to 50 per cent more for his food and clothing than he did in 1890. The one universal coin is the Mexican dollar, but every port has its own exchange. There is no country in the world where the rate of exchange is so prominent a factor. The lady of the house must calculate on the rate of cash per Mexican dollar; the man of business, the rates between Mexican dollar, taels, and gold, not forgetting the local taels.

To the newcomer it is bewildering, for now he can not buy a postage stamp to send a letter to the United States without being told the rate of exchange and paying accordingly.

The recent adoption of a gold standard by Japan is bound to be of untold value to China, and in another way to the United States. Japan is now increasing the prices of everything. The past week we have been notified that we must pay 10 Mexican cents per half ounce on our letters to the United States. Before, we paid 5 cents (Mexican). The Japanese steamers have increased the cost of freight and passage money over 10 per cent, as they now charge in gold values. In a short time we shall hear of her manufacturers increasing their prices. Thus the United States, having been a keen competitor, will now be able to obtain a large part of Japan's trade with China; and on the part of China, as her local bills and wages are payable in silver, she will be able to undersell Japan in the silk, tea, and straw-braid markets; and the coasting steamers, with their rates in silver, will get more freight, now that their competitors have demanded gold.

Take the post as an example. There is a regular Japanese post-office here. Last week I could send a letter to Hongkong for 5 cents Mexican, by the Japanese post—say 2½ cents gold; the Chinese post charges for same letter to same place 4 cents, or, say, 2 cents gold. To-day it costs me 10 cents Mexican, or 5 cents gold, by the Japanese post. Of course no one is going to pay 5 cents gold for a thing he can get done equally as well for 2 cents.

[For value of standards of currency, weight, and measure see page 2256.]

ABSENCE OF A FIXED STANDARD OF VALUE.

[From the North China Daily News, Shanghai, October 21, 1897.]

MINTS.

No surer sign of the incoherency of the Government of China could be found than is now shown in the large number of mints that are being built in all parts of the Empire. Instead of establishing one large mint, which would issue currency usable in all parts of the provinces, we have the present spectacle of each province putting forth coins in competition with others. Canton has its mint, which is said to be one of the largest plants in the world; the Tientsin arsenal has put out a currency of its own; Nanking has almost completed the buildings for its new mint; Ngankin is building one; Hangchow is doing likewise; Wuchang has had its mint in operation for several years; Szechuen, it is rumored, is soon to commence work; Shantung is falling into line, and so is Shansi. These will give us at least ten different kinds of dollars in the market, each seeking to oust the other. The design of these dollars is different, and their weights are not uniform, not to mention that the quality of silver varies widely. The result will be confusion worse confounded. Though the Canton and Wuchang dollars have been in circulation for several years, and Viceroy Chang Chih-tung has been transferred from Canton to Wuchang and then to Nanking—thus having an opportunity to use its influence in all of these seven provinces for the circulation of the dollars issued under his patronage—up to the present they remain a dead weight upon the market. Merchants prefer to use the Mexican dollar, which has a specific and recognized value. It is probable that they will continue to do so until the Central Government at Peking is able to control the viceroys and governors of the various provinces enough to cause them to act in concert for the good of their country and not allow them to keep up a destructive rivalry. A national dollar issued in many different places, but with a fixed weight of uniform silver, would soon become current both in foreign and native trade, and would displace the inconvenient and unreliable method of using sycee taels. The tael weight of an ounce of silver differs in almost every city, and the new dollars seem about to rival it in capriciousness.

THE PROPOSED JAPAN-CHINA BANK.

[Yokohama, Japan, Weekly Mail, January, 1899.]

The projectors of the Japan-China Bank (Nisshin Ginko) are of the opinion that the treasury should be their foster parent to the extent of 3,000,000 yen. Their scheme is extensive. They hope to finance all the trade that Japan does with China, Korea, and South Sea ports, and they talk of establishing their head office in Kobe, with branches or agencies in Yokohama, Nagasaki, Hakodate, Shanghai, Hongkong, Amoy, Tientsin, Newchwang, Hankau, Canton, Cheefoo, Chemulpo, and Fusan. Their capital is to be 10,000,000 yen, and they expect to get three millions of it from the treasury without interest, which sum they would hold as a reserve against losses. Public opinion, however, does not appear to be altogether favorable to the scheme. Some writers see no reason why a new institution should be started, while the Specie Bank, with its twenty years' experience and its established credit, is ready to do the work.

The difficulty calling for removal in the interests of trade is said to be that the Specie Bank will not grant bills for longer periods than ten days' sight, which time is insufficient for transactions either in China or in Japan. Hence, the whole trade between the two empires—a trade aggregating something like 100,000,000 yen—tends to pass into the hands of Chinese merchants, though it is not explained why these latter enjoy greater financial facilities than their Japanese rivals, unless, indeed, the foreign banks are open to one and closed to the other, as seems to be the case. Recent incidents in Shanghai showed that Chinese traders receive large accommodation from the foreign banks there, and we presume that the same rules apply to Chinese traders in Japan, but assuredly Japanese merchants are not similarly favored by foreign banks. The Jiji Shimpō acts as spokesman of the objectors. Its chief argument is that as the Specie Bank works on a gold basis it is not properly qualified to carry on the required business. It seems to us that such a contention is not very convincing. Japan is now a gold monometallic country, and the Japanese shareholders of the new bank would scarcely consent to have their capital converted into silver and to receive their dividends in that metal. They might be willing to take the risk of working with silver, but they would naturally insist on having their dividends in gold, and on forming a special reserve to guarantee them against heavy losses from exchange on advances made in terms of silver. A bank with its head office in a gold monometallic country and with shareholders and customers who must ultimately convert everything into gold could not derive profit from keeping its accounts in silver.

NATIVE BANKING METHODS IN THE INTERIOR CITIES OF CHINA.

[From a report by Mr. F. S. A. Bourne to the British Parliament, May, 1898.]

Exchange banks (in Szechuan, the most populous and largest interior province, located in the extreme central west of the Empire), which sell drafts on distant places, are almost all in the hands of men of the Shansi province (located in northern China, near Peking, the capital), who excel in this business. They have marked out among themselves a very high commercial morality, by centuries of rigorous domestic discipline. If an employee defrauds a Shansi bank, no appeal is made to the law or the magistrate; he is sent home to his native district, tried by his family elders, and treated in a very drastic manner, sometimes, it is said, buried alive. There are 17 Shansi banks doing business in Chungking, and 20 large "cash shops" or local banks exchanging "cash" against silver, and vice versa. An average exchange bank would lend about 200,000 taels here to business houses on personal security, on which they would pay 10 to 12 per cent per annum. This is security given to the public that the bank can meet its drafts. A piece-goods merchant with ample resources told me that he would have to give 7 to 12 per cent per annum for such an advance, according to the state of the money market. These exchange banks do not care to receive deposits from the public, as this would damage their credit. They employ agents who are always about the business quarter inquiring into the proceedings of their customers so as to gauge their credit. When they want money, they sell their bills on other places. They are often intrusted with money by the officials, sometimes Government,

but usually private funds, and on this they give, more or less as a favor, 5 to 6 per cent per annum. They do not lend money on land or houses, but they lend to local banks that advance it in trade on personal security. There are no bank notes in circulation at Chungking. When the merchants in the foreign import trade get in their debts, as on the three settling days, they buy bank drafts on Shanghai; they would send round to two or three banks with which the firm in question did business, and inquire their rate. No exchange brokers are employed. When a retail shopkeeper has gathered enough cash, he buys a shoo of silver (about 10 taels), and takes it at once to the merchant to reduce his indebtedness and save interest. Very little money is lying idle in business; but there is some hoarding of silver among the country squire (liang-fu) and farming class.

The most curious feature in this system of banking is that there are no advances against goods, but only on personal security. The only instance of an advance against goods I heard of in Ssü-chuan was at Chiating Fu, where an owner sometimes places insect wax in the house of a man who advances against it; but this is a clumsy transaction, only applicable to goods of fixed quality and of high value.

There are exchange banks at a very few of the largest places only; in Ssüchuan nowhere except at Chungking, Chengtu, and Wan Hsien. This accounts for the long journeys men make with goods. Thus, a merchant at Tungchuan Fu told me he was in the habit of taking raw silk down to Chungking for sale, and bringing back Lancashire cottons bought with the proceeds.

The division of the business of banking between exchange banks and local banks (cash shops) is much as follows: The former sell drafts on distant places and pay those of their other branches, put out silver at interest on personal security, do some financial business for the Government, but not much, to meet payments due to Peking, for instance, but for short periods, and take deposits, but not from the public generally, but rather as a favor. The local banks in some places issue paper money, but not in Chungking, borrow money from the exchange banks, and lend it to the smaller traders and shopkeepers, and change cash for silver and vice versa. The cancellation of indebtedness, one of the great functions of banking in Europe, is not undertaken by either class of banks. There are no current accounts and no checks.

AMERICAN MINTING MACHINERY IN CHINA.

[From a report by Consul-General Goodnow, Shanghai, August, 1898.]

Machinery for a mint at Chengtu has just been set up and tested. It was furnished by a machine company of Bridgeton, N. J., and is of sufficient capacity to turn out 5,000 dollars and 18,000 coins smaller than the dollar per hour. It is intended to make dollars, half dollars, twenty-five cent pieces, dimes, and five-cent pieces. This company also supplied the machinery for a new mint for making copper cash at Wuchang. This mint, with a capacity of 36,000 cash per hour, has been in operation two weeks.

The machinery for the mint at Chengtu was delivered by the company supplying it free on board at Ichang, the head of navigation of the Yangtze River, where it was taken in charge by the Chinese authorities. Its subsequent treatment was characteristic. The machinery was in boxes, as shipped from the factory. It was left on the bank at Ichang for a month, so close to the water that when a slight flood came the boxes were under water, and the muddy water deposited sediment until the boxes were full of mud. In this condition they were taken to Chengtu, being about two months on the way. When the boxes were opened, they were found to be caked up solidly with mud, except where the rats had dug holes and made nests while the boxes lay at the arsenal. The machinery finally was gotten into condition to be put together, but the dies were so badly rusted that they would be condemned in an American mint. The Chinese, however, made no objections to the imperfect pieces in the coins, apparently thinking them additional safeguards against counterfeiting. Some parts of the machinery were entirely ruined and others were so badly rusted that they can not last long.

POSTAL MONEY-ORDER SYSTEM IN CHINA.

The following announcement shows the introduction of an additional convenience of commerce in China in the adoption of modern methods for transmission of money between treaty ports through the postal system. The order was issued in November, 1897:

It is hereby notified that, in order to facilitate the transmission of small sums of money between the various treaty ports of China, the Imperial Postal Administration has decided to place on trial a system of money remittances under the following rules:

1. Persons wishing to make a remittance to or from any place where functions an imperial post-office must apply at the imperial post-office and pay in clean dollars or their equivalent the exact sum they wish to remit, plus a fee calculated at the rate of 2 cents per dollar or fraction of a dollar. In exchange they will receive a remittance certificate, sealed, signed, and dated by the postmaster, which they can forward in a letter to the person for whom the money is intended.

2. On the remittance certificate issued by the postmaster there appears on the left side one or more unobliterated postage stamps representing the value of the remittance and on the right side one or more obliterated postage stamps representing the value of the fee. The certificate itself is a mere statement that the stamps affixed on it were purchased at the issuing post-office on the date of issue and are to be redeemed at face value at the post-office addressed. Stamps purchased elsewhere or at other times can not be accepted for money remittances.

3. Each remittance is limited to \$10. Any sum between 1 cent and \$10 may be remitted. There is no limit to the number of remittances issuable to the same applicant.

4. Remittance certificates are documents payable at sight and to bearer. It therefore behooves the parties interested to take care that their certificates do not go astray. The Imperial Administration will not in any case be responsible for certificates after they have left the issuing postmaster's hands, nor will certificates be taken back or cashed, except at the offices named in the documents.

5. Remittance certificates can be forwarded in ordinary letters; but in case of loss or miscarriage no inquiries whatever will be made unless the covers have been duly registered. The registration rules do not provide indemnities for registered articles lost through

causes arising from force majeure, such as shipwreck, highway robbery, etc., but they do provide for articles lost through the fault of the post-office.

6. Remittance certificates must be presented for payment within six months from the date of issue. If any erasure or alteration appears on the face of a certificate, or if it or the postage stamps on it be cut, soiled, changed, or otherwise tampered with, payment may, at the discretion of the postmaster, be refused.

7. Remittance certificates are issued or cashed only on the days and during the hours the post-office is open for the registration of mail matter.

8. These rules are provisional and subject to revision. It is also within the discretion of the Imperial Postal Administration to suspend their action at any time, with or without previous notice.

By order of the Inspector-General.

CHINA'S CURRENCIES.

[Consul-General Jernigan in "A History of Banking in all Nations," edited and published by the New York Journal of Commerce and Commercial Bulletin, 1896.]

Some time ago I attended a session of the Mixed Court at Shanghai, China, and observing that the Chinese judge was asking questions of and receiving answers from the witness through an interpreter of his own nationality, I inquired if such was the usual form of conducting examinations in the courts of China. I was somewhat surprised to receive the answer that the witness resided in another province, and that the presiding judge was not familiar with the dialect of the province; and thus it is with the currency of China, the variations and peculiarities of which are as numerous as the dialects spoken in the different provinces. The difficulty, therefore, of writing logically of the currency of China will readily occur to the reader, and if the subject can be made intelligible by a general review more should not at present be expected.

"CASH" MONEY.

The coin which is more national in character than any other in use by the Chinese is called *cash*. It is thin and circular, rather more than an inch in diameter, with a square hole in the middle for the convenience of stringing, and should consist of equal parts of copper and zinc, and each piece should weigh 58 grains troy; but their only national coin has been so debased and reduced in size within the last fifty years that most of it now in circulation will not weigh more than 30 grains. The cash well illustrates the size of commercial transactions among Chinese, as its fluctuating value in the provinces shows the unreliability as to the value of all transactions. About one thousand cash should be required in exchange for a dollar, but in some provinces as many as eighteen hundred are required, and often in the same province the value is so uncertain that it is not known one day what the purchasing power of a cash will be another; and to add to such apparent business perplexity debasement has been so energetically and skillfully practiced as to invest the genuineness of the coin with so great suspicion that purchasers in the markets have to supply themselves with genuine and debased cash to facilitate purchases, as there are articles which the genuine cash only will buy and others which are sold for the debased.

The antiquity of the use of *cash* is established by authentic proof. Chinese writers discuss, with every assurance of accuracy, events happening several thousand years ago, and, while in no country in the world does age receive greater reverence than in China, there is a national sentiment which places so little value on the importance of time as an element of consideration in the affairs of life that native historians may not always have fully appreciated the studious research demanded by modern scholars as a first qualification to write authentically of remote events. From the collections of numismatists there appears to have been in existence as early as B. C. 524 a Chinese coin with a square hole in the middle, similar to that seen in the cash now in daily use, while another account credits the origination of round cash to a chief minister of the Han dynasty, in the twelfth century before our era. But however the issue may be decided as to the precise time when cash was first used as a coin, the date is sufficiently remote to prove that copper has existed as a purchasing power, and that it has maintained such in more or less degree, for centuries in China.

This small copper coin, the tenth part in value of a cent, is the chief aim of acquisition by the Chinese laborer, for it supplies his wants and satisfies his aspirations. The use of such small denominational currency indicates wants which, to the laborers of the Occident, must appear easy to satisfy; but the returns of labor in the Orient demand the industry of a day as in the other parts of the world, and the Chinese laborer must bestir himself from early dawn until evening to win the requisite number of cash to supply his necessities. Amid changing dynasties this coin has remained unchanged in the performance of its monetary functions, and the merchants of China trade on as small margins to-day as they did at the date of the earliest records of commercial transactions in China.

PAPER CURRENCY.

The introduction of paper currency into China appears to have been due to the use of seals, and is very closely connected with the history of printing. When it became the custom of certain Chinese officials to give a money value to certain articles by impressing their seals upon them, the idea of paper money was naturally suggested. Seals were borrowed from western Asia, and the Chinese having made them and cut upon them their own writing they were used in giving validity to official documents as well as a manifest proof of their genuineness. Their use was extended by subsequent legislation by giving one to every officer, and the grade of the official was indicated by the metal from which the seal was made, those made of silver being given to officers of the first and second rank, and the copper seals of the Taotais being a continuation of the old rule which has come down from 221 B. C. The seal may also be accepted as marking the visible sign of the change from feudalism to centralization. The official who carried it admitted his representative capacity and acknowledged the imperial head of the State from whom he received it.

The most reliable date of the introduction of paper into China is stated to be about A. D. 200, but seven centuries passed before books were printed and as many as eight before paper currency was systematically adopted by the Chinese Government. The long interval between the introduction of paper and the adoption of a paper currency is attributed to the habit of the workmen of first cutting into the material of the seal instead of cutting the inscription in relief; but when the thought occurred that relief cutting would leave a white ground with a red or black inscription the invention of blank forms and the printing of books followed.

"FLYING MONEY."

A. D. 806 is the most reliable date of the first appearance of paper currency, and it was then that bills of exchange were called "flying money." By an imperial ordinance, then first made, merchants in the capital could receive Government bills in return for copper money, and at any of the provincial capitals the provincial treasurer could pay the amount stated upon the bill. This system of banking was a facility offered to merchants by the Government, and was again in operation about the year A. D. 960, a bureau being instituted at the capital for the transaction of the business. And in A. D. 1023, when copper became so scarce in the province of Szechuen that an attempt was made by the Government to relieve the wants of the situation by the introduction of iron cash coinage, the failure was so seriously felt that paper notes were again put in circulation at Chengtu, it being stipulated that such notes were to be returned every three years, an idea which originated with the wealthy merchants, and, being accepted by the Government, the merchants were left to conduct the business. When the Golden Tartars conquered north China in A. D. 1150, they adopted a paper currency, because of the scarcity of copper, and during the succeeding century of their reign, as during the century following of Mongol domination, the most strenuous efforts were made to maintain a paper medium.

The following details of the progress of paper money are given by Martin, in his history of China: In the year 119 B. C. paper money was used by the Chinese; sometimes a nominal currency was issued on pieces of skin a foot square, or on pasteboard; in the Tang dynasty, A. D. 807, the currency was more regular and copper only used for coining. Contributions were obliged to be made to the treasury, for which "the Sian," voluntary money, was issued; A. D. 960, notes were issued for merchandise deposited in the public treasuries like pawnbrokers' duplicates; they were called "Pien Ch'ien," or accommodation money, were everywhere negotiable, made on paper a foot square, with their current value stamped on them, and had an official seal. Subsequently a system of checks was issued to replace the heavy iron coinage used. About the tenth century a better system of banking was introduced; bills of exchange were issued, payable every three years. About the twelfth century the public creditors were paid by the issue of notes, or contracts in nominal value, ranging from 200 to 1,000 cash. The extent to which these were issued toward the close of the century is stated to have been 28,000,000 ounces of silver. Different provinces also issued their own paper, and a great monetary confusion arose.

PAPER MONEY IN THE THIRTEENTH CENTURY.

Marco Polo, the Venetian traveler, who resided in China for upward of twenty years, about the year A. D. 1256 thus describes the mode in which paper money was then made and issued by the Emperor, or Grand Khan, in the city of Peking. The bark is stripped from a tree (the mulberry), on the leaves of which the silkworm feeds. It is first well soaked in water, then pounded in a mortar into a pulpy consistency, and then made into paper of a dark color, which is cut into oblongs of different sizes and values. These notes are signed by special officers and stamped with the Emperor's seal, which attaches value to it. The penalty for forgery is death. This money is circulated throughout the Empire, and any article can be procured by those who have this money. When these notes are damaged from use, they are exchanged at the mint for new ones at the charge of 3 per cent; the holders could obtain gold or silver for them any time by applying at the mint, provided the metal was intended to be manufactured into ornaments, drinking cups, etc. The armies of the Emperor were paid with this currency. One of the Government notes extant during the Ming dynasty has the following on one half of it: "At the petition of the treasury board, it is ordained that paper money thus marked with the Imperial seal of the Ming shall have currency and be used in all respects as if it were copper money; whosoever disobeys will have his head cut off."

ABOLITION OF PAPER FOR SILVER.

When the Mongols were driven from power, says Klaproth, they had ruined China by their paper money; and notwithstanding the effort of the Ming dynasty to revive paper currency by recalling the old and issuing new notes for 100 to 1,000 cash and trying to keep up their value by forbidding traffic in gold or silver, the value of the notes declined in 1448 to 3 cash of copper to 1,000 cash paper. And in A. D. 1455, although the Government decreed the taxes to be paid in paper money, forbidding the use of metal money, the nominal Government currency gradually declined and was finally abandoned, as the products of the Mexican and Peruvian silver mines flowed into the ports of southern China through the agency of foreign trade. Notes were finally abolished about A. D. 1620, the conquest of silver over paper having occupied about a century. But silver had been used in China as money long before the introduction of American silver, though the importation of American silver was found the unfailing stream through which the ruling currency of China was kept in circulation; and the discovery of the silver mines in America is the cause of the dominance of silver in China as the currency in all large transactions. Eighty years after the discovery of America, and sixty-one years after the Pacific Ocean was first seen by Balboa from the mountain tops of Nicaragua, the import of silver had been so large that seven or eight ounces had the value of one ounce of gold.

In a work by Wang-lin, published in 1831, the point is made that silver was not employed as money before the Tang dynasty, A. D. 618, and that it was then introduced. In another work, called Si-chien, by Ku-Yen-Wu, who died two centuries ago, it is stated that before the Tang dynasty copper cash was the medium of exchange between the Government and people, and silver had never come into use; but other authorities maintain that at that time silver was already introduced in south China, meaning by that term Canton and Kuangsi.

THE THREE BELTS OF CIRCULATION.

The exposition of Chinese history by Ku-Yen-Wu shows that there were, in regard to money circulation, three belts of country; that in the extreme south gold and silver were in use, Canton being the center of trade; in middle China, all along the Yangtze into Szechuen, copper cash were used everywhere as the medium of exchange—the first and second belt being ruled from Nankin as the center; and in the north, which was under Tartar administration, copper coin and grain were employed as a double medium of exchange. From this account of the circulation of silver it appears that it began to be a currency in south China first, and at a time when China sent her prefects regularly to rule in Cochinchina and Cambodian cities; and the silver, which circulated by weight in Canton in A. D. 500, would be partly Burmese, as it was then abundantly produced in Burma, and partly what Arabian merchants and others brought from distant ports; for Arabian merchants probably shared the commerce of the southern provinces of China, as there are many proofs of the activity of Arab merchants from the Han dynasty downward. So much for remote history.

CURRENCY OF THE PRESENT.

But the date of the introduction of silver into China and the capacity of the silver mines of China are not of so much practical interest to the business man as a knowledge of the silver currency now in use. It is doubtful if the traveler or merchant can now visit any province of China where he will not find in circulation the Mexican dollar, which seems to supply a great desideratum of the Chinese merchant, and passes current throughout the Empire. The tael is the money of account and the base of all monetary transactions in China. It is supposed to be a certain weight of silver, called sycee silver, and in shape resembles the shoe of a Chinese woman. The tael is not issued by the Government; it is in no way vouched for or guaranteed by any legal authority, and yet it is the standard of value in all money transactions, while in appearance only a rough ingot of silver, with variable weight and fineness, and having no fixed standard. To add to the confusion of such a money—circulated without authority, stamped by no government, varying in weight in different parts of China—not only is there a difference in the value, but often more than one kind of tael is used at the same port. It would be perplexing to attempt any minute account of all these current taels, and as Shanghai is the largest treaty port in China it would probably be more intelligent to give a general explanation of the tael currency as it is found in Shanghai, an interesting paper on which has been written by James K. Morrison.

There is at Shanghai what is called a Shanghai tael weight and a Shanghai tael currency, the latter having no existence as a coin and yet being the money of account, and, as stated, being "only a certain weight of silver, called sycee silver, of a variable fineness within certain limits, but adjusted by the addition of a premium or betterness to a fancied standard, and the product dealt with or worked out in an arbitrary manner ruled by custom. The standard is called fancied, because it can not be found to be clearly laid down by the Chinese what the standard of fineness is on which they work."

SYCEE SILVER.

A word as to what is meant by sycee silver may be of intelligent interest. The word sycee is called by the Chinese "wan yin," meaning pure silver; and sycee, as used in Shanghai, is cast into ingots, or shoes, weighing about 50 Shanghai or Chauping taels weight. In some parts of China ingots of lesser weight may be seen, but this is seldom. In making sycee, which is usually done at Shanghai by melting down silver bars imported from Europe and America, the melter's impress on each shoe their "chop," or name, and one or two characters giving reference to the record of the date of casting, the weight, and premium. When the "shoes" are cast they are inspected by an official called the "kung koo," not appointed by the Government, but selected by the Chinese bankers and money changers, and paid a small fee of so many cash on each shoe he inspects; and when satisfied, the kung koo writes on each shoe in black ink in large Chinese characters its weight and the premium it bears, and then the shoes of sycee are ready for circulation. In order to guard more effectively against fraud, not only are the melter and inspector individually responsible, but deadly penalties are enforced against their heirs for all time. Mr. Morrison gives an example of the method used for arriving at the value of the sycee in Shanghai currency as follows:

1. The weight of the sycee is taken in Chauping taels.
2. To this is added the premium or betterness that the sycee bears, and which is marked by the kung koo on each shoe.
3. The combined sum of weight and premium is then divided by .98, and the result is taels Shanghai currency.

The calculation in figures is given as follows:

Say 60 shoes of sycee weigh Chauping taels	2,992.57
Premium averaging 2.707 taels per shoe, or 5.43 per cent.....	192.45
Divide by .98	3,155.02
Gives in Shanghai taels currency.....	3,219.41

The premium represents the fineness of sycee, and ranges from 4 to 6 per cent, or from 2 to 3 taels on each shoe of about 50 taels weight. Different reasons are given for the 2 per cent mentioned under No. 3, or the dividing by .98. One is that it is an old custom; another that it represents the kung koo's fees and melter's profits, while a third is that it did not originally exist, but is the arbitrary act of an impecunious viceroy, who desired to fill his exhausted treasury. However, the 2 per cent in no way affects the value of the Shanghai currency.

THE STANDARD OF SYCEE.

The necessity of having a standard of fineness, as well as a working standard, is apparent, particularly as the premium added to the weight of the silver varies, and yet it is difficult to ascertain from the Chinese, with their characteristic disregard for accuracy in such matters, what the standard of sycee is. Some place the standard of sycee at 6 per cent under 1,000 (pure silver); others say it is 998, and still others fix the standard at 916.66. The shipment of sycee to the Indian mints, extending over a long term of years, has made it possible to ascertain with reasonable accuracy the proportion of pure silver in 1,000 taels of Shanghai sycee. While particular shipments varied as much as from one-half of 1 per cent below to one-half of 1 per cent above the usual standard, it was found that 916.66 Chauping taels weight of pure silver was the average output of 1,000 taels of Shanghai currency. This (916.66) is the standard accepted by foreign bankers in China for the Shanghai tael currency—that is, if the Shanghai tael existed as a coin it would contain 916.66 parts of pure silver in 1,000 parts. There is a difficulty, however, in accepting 916.66 as the standard on which the Chinese work their system of premiums. It is necessary to eliminate the 2 per cent "custom," which makes the working standard on which the Chinese calculate the premium to be 935.37. Working on this standard, and assuming the highest premium sycee can bear to be 6 per cent, we arrive at a maximum fineness for Shanghai sycee of 991.50. This is nearly 1 per cent short of being pure silver, but it is above the average fineness of sycee as now met with. To bring it up to pure-silver (1,000) touch, it will require a premium of about 6.91 per cent on the standard named. The original standard of sycee, which must have been founded on the difference between a standard and pure silver, was probably 943.396. Although this standard is much higher than the present working standard, it is believed to be the one on which the currency system of Shanghai was originally founded.

Assuming that this is substantially correct, it shows that "sycee, like everything else connected with coinage in China, has deteriorated very considerably." If the 2 per cent referred to above did not originally exist, but was brought into force when the standard was 943.396, it would reduce the value of the tael to 924.528; or it is not at all improbable that "various squeezes" gradually brought the standard down to 935.374, and, finally, the 2 per cent reduction was made, further reducing the intrinsic worth of the currency tael to 916.66, as it is at present, but leaving the system of premium to be calculated on the previous quality of 935.374.

[For value of standards of currency, weight, and measure see page 2256.]

However this may be, the present Shanghai currency tael contains 916.666 parts of pure silver in 1,000 parts; or, in other words, 1,000 taels of Shanghai sycee ought to contain on an average 916.666 Chauping taels of pure silver. The assays in India practically confirm this standard. The actual weight of sycee required to equal a Shanghai tael varies according to the premium the sycee bears; but actual weighing and experience fix the ratio at 930 Chauping taels to 1,000 taels Shanghai currency. If a Shanghai tael coin were to be issued based exactly on the present tael currency, it would weigh 565.697 grains troy, of which 916.666 parts would be pure silver and 83.334 parts alloy.

THE STATUS OF GOLD IN CHINA.

From the earliest dawn of civilization gold has retained its preeminence among the precious metals. A Chinese author of the second century writes that gold early attracted attention because of its weight and beauty, and gives the following reasons why it has retained superior value and been held in higher esteem than other metals: It does not tarnish with time; it does not become lighter when melted even if it goes into the crucible a hundred times, and it yields without manipulation to the artificer. Writing on the subject a century later Pliny substantially affirms this account of the superior estimate placed upon gold, and says that the superiority of gold is in its losing no weight when in the melting pot or in a funeral pyre on the occasion of a cremation; even when drawn into wire the hands are not soiled by it, as in the case when silver, copper, or lead is handled. It is also capable of being spread out into a thinner leaf than any other metal and is divisible into a greater number of parts, and there is no other metal which can vie with gold in the facility with which it can be spun and woven like wool, so as to take the place among materials which compose textile fabrics. It is related that some of the Roman kings wore golden tunics when they triumphed, and Pliny records that he saw at a naval sham fight at which the Emperor Claudius was present, the Empress Agrippina seated beside him, who wore a robe woven entirely of gold thread.

From the ancient records it can be learned that gold was abundant in Europe and Asia at the earliest date of authentic history. In Europe it was found in the Tagus, the Po, the Hebrus, and in Thrace, during the time of the Roman Empire; while in Asia it was found in the Pactolus, in Asia Minor. The Ganges was famed for its gold. The Persian Monarchy was enabled to use gold for coin because of the quantities brought from the Ural and Altai mountains and the rivers which flowed from them; and in Spain mountains otherwise unproductive were found to produce gold. In China the chief places mentioned as producing this metal are Yunnan and Szechuan, Kiangsi, Canton, Kuangsi, and Fukien.

The Chinese collect gold in the sands of rivers, melt rocky masses, persevering until they separate the metal from its stony envelope. Formerly the Chinese treated the ore in a furnace, but there is no account, until recently, of their using powder to break up rocks, for which both dynamite and powder are now used. The gold mines of China, however, have never been worked according to any system now recognized as effective. The gold which has been extracted has been hoarded or sold to goldsmiths, and its use in buying and selling has been in the form of uncoined metal, sold by weight, its important stability of value having caused it to be everywhere acceptable in payment for commodities.

Translations from the Peking Gazette show that the rich families of Peking are parting with their hoards of gold because of the large price it commands in silver; and as the property holders of China count their treasures in taels of silver, the satisfaction of seeing their wealth apparently increased so rapidly is a temptation they find it difficult to resist. It is related that in Chinese life it is quite common for rich families to become poor, and that in such cases gold ornaments will be exchanged for silver, thus proving that the ambition to count wealth by numbers, without a proper regard for real value, has added to the quantity of gold in the markets of China and increased the amount exported to foreign countries.

As China is a silver-using country, and as there has been no rise in the average prices of native commodities simultaneously with the fall in the value of silver, these facts have naturally stimulated the desire of the Chinese to exchange their gold for silver, thus doubling the purchasing power of their means in the markets of their country. The demands of the gold-using countries have also been felt in the money markets of China, opening wider the door for the exportation of gold, infusing life and activity into the markets, and adding to the advantages in exchange in favor of the resident Chinaman who owned gold and who lived on the native products of China. With such forces at work in business, the purchasing power of gold continued to appreciate, and although the value of silver as compared with gold depreciated, yet, as stated, the purchasing power of silver remained virtually unchanged. In 1866 the price of gold bars of a fixed weight and fineness was 164.50 taels per bar; on July 3, 1894, the price was 341.50 taels per bar, or an advance in taels of 177, or 107 per cent. In July, 1894, a bar of gold would buy 341.50 taels of silver against 164.50 taels in 1866; and, as 100 taels of silver will buy as much now as then in the way of commodities, it follows that a gold bar will buy 107 per cent more of commodities. From the above facts, which have been compiled from a trustworthy source, it is clear that legislation with reference to gold and silver has apparently brought no disadvantage to the laborer in the silver-using country; but this conclusion, in order to be sound, must be supported by another fact, that the wages of labor have proportionately increased in the silver-using countries, which is not the case with China. The Chinaman who has a hundred dollars in gold may buy two hundred Mexican dollars; but the Chinaman who has no gold, and must work to secure enough silver to purchase the necessities of life for himself and family, receives almost the same price in silver for his labor as he did when a hundred dollars in gold would not buy more than one hundred and twenty-five Mexican dollars. These two facts go together in considering the benefits and evils resulting from the monetary changes as such changes affect the labor and commerce of the world.

HINTS TO AMERICAN PRODUCERS AND MERCHANTS.

[From reports of American consuls in China.]

The trade in cotton goods is, of course, one of the most important to American merchants, and it will be noted with pleasure that while there has been so large a decrease in the total importation, this decrease has been in goods from other countries than the United States, and that there has been a marked and steady advance in the American varieties during the period covered by the table. We must not conceal the fact, however, that even American cotton goods suffered a sharp decline during 1895, the number of pieces imported being 704,488 less than in 1894.

Of the whole loss in the value of our trade for 1895, amounting to 5,000,000 taels (\$4,030,000), as above stated, the greater part is to be charged to imports, which fell from 9,263,082 taels (\$7,466,044) in 1894 to 5,093,182 taels (\$4,105,105) in the year under review. There was, however, a loss of over 1,000,000 taels in exports also.

In imports the principal items affected were cotton and kerosene. I have already dealt with the former in a general way. The accompanying table, however, will make the matter clearer:

GOODS.	1894			1895		
	Quantity.	Value.		Quantity.	Value.	
		<i>Taels.</i>	<i>Dollars.</i>		<i>Taels.</i>	<i>Dollars.</i>
Drillspieces..	705,031	2,045,783	1,648,901	518,402	1,760,356	1,418,847
Jeansdo.....	26,008	52,026	41,933	21,798	43,689	35,213
Sheetings.....do.....	1,275,744	3,699,655	2,981,922	762,092	2,286,269	1,842,733
Total cotton.....		5,797,464	4,672,756		4,090,314	3,296,793
Kerosene.....gallons..	51,670,853	5,905,228	4,759,614	23,055,940	3,098,214	2,497,160

It will be seen from this table that the decline in quantity was somewhat atoned for by the improvement in price; but I ought rather to note that the enhanced price was the real cause of the decline in quantity imported. The increased value as measured in taels was doubtless due to the depreciation of silver as compared with gold.

AMERICAN OIL.

The decrease in imports of kerosene is charged to an excessive supply at the close of 1894, and to an insufficient stock, temporarily, in the United States, which led to an advance in price. This reduction in shipments from the United States afforded a fine opportunity to our Russian and Dutch competitors to improve their trade, of which they were not slow to avail themselves, so that for the year under review their imports of kerosene show a remarkable increase. The situation will be best exhibited by a tabular statement, as below:

Year.	American.	Russian.	Sumatran.
	<i>Gallons.</i>	<i>Gallons.</i>	<i>Gallons.</i>
1891.....	39,348,477	10,000,902	
1892.....	31,884,013	8,649,318	
1893.....	36,720,382	13,286,198	
1894.....	51,670,853	17,500,283	534,280
1895.....	23,055,940	26,566,679	2,395,035

Another item of interest to American merchants is flour, and the trade in this article is rapidly expanding. It is entered free of duty. The value of the import doubled during the five years ending with 1895, having risen from 704,000 taels (\$567,424) in 1891 to 1,495,895 taels (\$1,205,691) in 1895, an increase of 377,115 taels (\$303,955) over that for 1894. American flour is growing more and more popular in China.

Notwithstanding the general improvement in foreign trade, the value of our own trade considerably decreased, the whole amount being 20,476,584 taels (\$16,504,127), a loss of more than 5,000,000 taels as compared with the returns of the preceding year, when American trade reached its high-water mark, 25,705,870 taels (\$20,718,931). The comparison, however, is hardly calculated to give a true estimate of the condition of American commerce in China. A review of the eight years (1888-1895) shows that with the exception of two slight reverses, one of which is that under discussion, there has been a steady improvement in the volume of our trade. The figures for the eight years mentioned are:

Year.	Chinese currency.	United States currency.	Year.	Chinese currency.	United States currency.
	<i>Taels.</i>	<i>Dollars.</i>		<i>Taels.</i>	<i>Dollars.</i>
1888.....	12,108,281	9,759,274	1892.....	16,846,555	13,578,323
1889.....	10,889,785	8,777,167	1893.....	17,169,213	13,838,386
1890.....	11,840,805	9,543,689	1894.....	25,705,870	20,718,931
1891.....	16,765,382	13,512,898	1895.....	20,476,584	16,504,127

CARRYING TRADE.

Although our commerce with China, as will be seen by these figures, is not small, there is but an insignificant part of the carrying trade in our hands. The total number of vessels entered and cleared during the year was 37,132, with a tonnage of 29,737,078, of which 92 vessels, with a tonnage of 86,427, were covered by the American flag. The only treaty powers showing a smaller number of vessels were Holland, Hawaii, Italy, Russia (90), Siam, and Spain. Trade was helped by the easy condition of the money market. Interest on advances fell to 6 per cent and on deposit to 4 per cent per annum. There was considerable fluctuation in exchange, but less than in the preceding year. The average value of the tael in United States gold was 80 cents.

DIFFERENCE IN BUSINESS METHODS.

The advance agents for business in China on behalf of European and American companies have different methods for promoting their business success. Within the last twelve months there have been several Americans at this port (Shanghai) soliciting contracts to build railways in China, but, unfortunately, the majority have come with letters of introduction only to their diplomatic and consular representatives and with no legal evidence on record that they represented incorporated companies capable of contracting and executing contracts to the credit of American workmanship. It is not meant to discredit the statements of any of such agents, but I do mean to impress the fact that those who come to China to undertake works of internal improvement should come with the proper credentials for business. It will not do for an agent to adduce letters of introduction, but he must show that he represents an incorporated company of reputation and undoubted solvency. For an American to undertake to build a railroad or develop a mine in China without making his work representative in every particular would work injury to his countrymen and prove an insuperable objection to the employment of other Americans. It is therefore highly important that there should be no mistake in this regard. There is, however, an agent in China, and he is a patriotic American citizen, representing an American company legally incorporated and well known to be financially capable and competent to build railroads and develop China on any other lines; and it is probable

that this agent, properly equipped, will secure some valuable contracts for his company. It will be a mistake to presume that the business Chinaman is incapable of looking through character. He can look quite through the deeds of men as well as other human beings, and the "scalpers in the market" seldom escape his observation. My experience is that our countrymen coming to China for business do not recognize the sound business principles I have indicated to the extent of some of their foreign rivals.

The necessity for an exhibition building at Shanghai in which samples of American machinery and products could be exhibited should be promptly recognized and the means for its establishment as promptly supplied. Ocular proof of an article is what the Chinese prefer before buying. Illustrated circulars do not convey to them the desired information. They want to see a sample of the machinery, and now is the time to build the exhibition hall.

KEROSENE.

[By Consul Smithers, at Chung King.]

I would recommend that the owners of kerosene-oil wells in America, with a view to increase the demand as well as to provide unadulterated oil, establish a depot here for the sale of their product, with, if possible, a foreigner as agent. A great help to the sale of the same would be to give away with each case sold a cheap but noncombustible lamp. A great many fires have resulted through the use of defective lamps, causing the authorities to issue a proclamation stopping importation of the oil into the city. This, however, has now been rescinded, and the oil enters, but a limit is put on the quantity.

OPENING FOR UNITED STATES PRODUCTS.

[From Consul Child, at Hankau, October, 1897.]

The demand for United States textile goods, especially drills, is steadily increasing on account of their superior quality. The inquiry for American bicycles is also increasing, and there are now about sixty in use here; they are considered superior to all others. United States flour is used largely in the Yangtze Valley, as well as all kinds of American canned goods, hams, bacon, cheese, California fruits, etc. An American firm has been located here in the last month, and will do a general export and import business.

In regard to the importation of agricultural machinery, nothing can be done at present; but Professor Brill, of Cornell University, New York, has just arrived at Wuchang for the purpose of establishing a model farm under the auspices of the viceroy, and he will endeavor to introduce the latest agricultural machinery here.

American clocks and lamps are the only ones in use here, the native stores being filled with them. United States axes are coming into general use. Boots and shoes are manufactured by native workmen at less than one-half the cost of the imported article, but they are not so good and are badly finished. The same may be said of clothing. As a general thing, hides and skins are exported, and the leather used here imported, mainly from Europe.

I think that China will shortly become a vast field for American mercantile enterprise, as the goods manufactured in the United States are generally popular.

IMPORTS FROM THE UNITED STATES WANTED.

[By United States consul at Chung King.]

As to other articles of United States manufacture which would find a sale in the city and neighborhood, I would recommend the importation of clocks and watches, locks of every description, and hinges for doors and windows.

The fall in the price of silver, I am told by a local foreign dealer in these articles, will affect the ready sale of the same. The Chinese, not being able to pay over a certain price for the foreign articles which are sold at a gold rate, resort to the native article in consequence, which of course can not be compared to American goods. If some fixed exchange could be adopted between the buyers abroad and the sellers at home, it would help the sale of these goods a great deal.

From my own observation among the natives in general, apart from foreign piece goods and petroleum, their use or consumption of foreign articles is infinitesimal.

The port has been open to foreign trade only about five years, and its long distance from Shanghai and the defective means of communication, except by telegraph, have prevented a demand for articles of foreign manufacture.

There are no direct imports from the United States to Canton. These are effected chiefly through Hongkong. Hence it is a most difficult matter to obtain correct statistics as to the value of these imports; but a rough estimate of these imports for the calendar year of 1896 is given in the subjoined table, believed to be approximately correct.

ESTIMATED VALUE OF IMPORTS FROM THE UNITED STATES TO CANTON.

ARTICLES.	Taels.	United States currency. (a)	ARTICLES.	Taels.	United States currency. (a)

a The reductions to United States currency (round numbers) in this report have been made on the basis of the valuation of the tael given by Vice-Consul Alf-73 cents

In the following table is given the summary of the trade in foreign goods at the port of Canton for 1896:

	Haikwan taels.	United States currency.
Imports—		<i>Dollars.</i>
Hongkong	11,486,169	8,385,200
Japan	79,635	58,100
Cochin China, Tonkin, and Annam	429,879	313,800
Siam	137,913	100,670
Other places	24,161	17,630
Total from foreign countries	12,157,757	8,875,100
Imports from Chinese ports	150,699	109,680
Total foreign imports	12,308,426	8,984,780

Of the above imports the sum of 103,310 haikwan taels (\$79,818) was reexported to foreign countries and Chinese ports, leaving a net total of foreign imports amounting to 12,199,086 taels (\$8,905,000).

AMERICAN WHEAT AND FLOUR IN CHINA.

The use of wheat is increasing in favor every day, but that from California, except when manufactured into flour, is so dear that the merchants have to depend entirely upon the import from the north. Of these articles Siam and Tonkin contribute large shares, and the United States can easily secure the market, provided the prices can be brought down to meet the demand of common people. United States flour is more than 20 per cent higher than that from the northern provinces and Hongkong. However, the rich people prefer the flour and wheat from America to any other, and the prospect for American wheat is better than ever. A perceptible decline in the imports is noticeable on account of the rise in exchange. Hence the return on these articles is placed under the head of "Native sundries."

RIVER TRAFFIC.

[By Consul Smithers, of Chung King.]

As to the question of steam traffic to Chung King up the river Yangtse. In my opinion it would be profitable for some American shipbuilding association to make a detailed survey of a section of the river between Ichang and Kueichow for a distance of 150 miles, which is the only part required to be surveyed.

A British expedition ascended the Yangtse in 1869 as far as Kueichow and reported on the conditions then existing. There are many places in this section of the river which would require the use of dynamite, and if pressure were brought to bear the Government of China would probably employ foreign engineers and conduct these operations, for it would be useless to grant the right to run steamers if rocks can not be removed from the river. Of course there are other difficulties, but it remains to be seen whether they are any greater than those met with on the section of the river between Hankau and Ichang, between which ports steamers of light draft are running. I have reference to the rise and fall of the river, which in summer months is 50 feet more than during the winter, and frequently very sudden. I am of the opinion, however, that a survey should be made, and would result in benefit to those undertaking it.

AMERICAN GINSENG IN GREAT DEMAND.

The United States consul at Amoy, writing to the State Department under a recent date, says: I wish to call especial attention to an article now imported from the United States to a limited extent and from Korea—ginseng. It is a native of Colorado, Wyoming, and Utah, as well as of other mountainous districts of America, also of Korea and northern Asia. I do not exaggerate when I state that it is possible to market annually in China \$20,000,000 worth of these roots. They are now being grown in the United States to a limited extent, and prices obtained by the grower are entirely out of proportion to those realized by the thrifty exporter. It sells in Amoy at from \$25 to \$35 (Mexican) per pound. It costs in America from \$2 to \$3 (gold) or \$4 to \$6 (Mexican). Yet at these figures Amoy handled during 1896 to the value of 109,823 haikwan taels, or \$88,517.34 United States gold (at \$80.6 cents, October, 1896, rate), of these roots from America alone, and from Korea 54,867 haikwan taels, or \$44,222.80 United States gold. The Korean article is much higher priced and more skillfully cured, although not otherwise superior in quality to the United States product. It was formerly bought from the Americans by Chinese dealers at a few cents per pound, and is still regarded as a profitable crop. The discovery that the Chinese were making fortunes from these purchases caused an advance in the price; but the real facts and possibilities in this line seem never to have dawned upon the struggling farmers in the mountainous districts of America, so well adapted to the growth of the plant. I have searched in vain for a report upon the subject which afforded any idea of the field open here for American enterprise. It seems to me that if our people realized that at least \$3 gold could be fairly demanded by the grower for every pound of well-cured root, the market would be practically unlimited, a new mine of wealth affording employment for a vast population would be opened, and the industry would tend to relieve the distress caused by the decline in the value of our carbonates and galenas. The ginseng, a plant of the genus *Aralia*, somewhat resembles the horse-radish root. It grows wild in the mountains. The species *A. quinquefolium* is the article of export. It is used as an invigorating tea by all the wealthy Chinese and as a medicine by the native physicians. It enters largely into the list of presents sent by the wealthy to friends and the articles exchanged between high officials. It is bought by the middle classes throughout the entire Empire, and even the poor peasants give up their hard-earned silver for this national panacea.

TRADE WITH THE UNITED STATES.

[From report by United States consul at Chinkiang, 1897.]

There seems to be a considerable want of knowledge in the United States regarding articles suitable to the natives of China, and I might say a want of enterprise on the part of our merchants in not putting suitable goods forward. I am continually receiving from our merchants price lists of articles, such as bicycles, boots and shoes, beer, etc., of which there is no use or consumption by the Chinese. Even in the case of suitable articles it is hopeless to expect natives to order from price lists, however well illustrated. They want to

see the articles themselves. It is absolutely necessary to send samples. Prices accompanying samples should be inclusive of cost, freight, and insurance to this port, as it is difficult, if not impossible, to calculate these charges on this side.

Chinkiang is a very important center for the consumption and distribution of cloths manufactured abroad. Drills and sheetings are the only articles in which any business has been done heretofore with the United States. Few varieties of American manufactured cloths have been seen here. The whole of the import trade in cotton and woolen piece goods has been done with Shanghai. Country dealers, who are the largest consumers, have not had opportunities of seeing our manufactures. The only way to accomplish this is for manufacturers to send out samples and trial shipments of their cloths. If they will communicate with me, I will see that their samples are put into proper hands. In September last a British firm was established here for the importation of piece goods direct from Manchester, and has been doing a good trade. It is the custom for this firm to receive by every mail samples of all kinds, which are immediately shown to dealers. Their verdict is communicated to the manufacturers, and if it be favorable a trial shipment (say of 10 bales of each) is made of those lines which promise to sell. At first, most likely, there would be a loss on these, for no one can expect to make a profit on new cloths and chops, but as the latter begin gradually to become known the loss would in the same proportion diminish, until the result would be profit. British firms are fully alive to the fact that to introduce goods into China a sacrifice must undoubtedly be made, and it is owing to their recognition of this that they have maintained their supremacy in the commerce of this country. American firms seem to lose sight of this, and consequently have not made the progress they should have made. Another very important factor in the development of our trade is that the qualities of the goods must be consistently maintained. Reports have reached me from several ports in China of shipments of gray sheetings and shirtings having to be disposed of at a loss, owing to inferiority. In one case a Chinese dealer bought 20 bales on a reference sample which arrived by mail. The goods came about a fortnight later, but when they were received the quality was found to be much lower than that of the sale sample. These differences do infinite damage, and at once condemn the quality and chop. A chop on a certain cloth soon becomes well known to buyers, and if cargo is always consistent in quality the cloth can command a substantially higher price than exactly the same article without the chop. Consequently, should at any time a shipment be found inferior, the reputation of the chop is destroyed.

AMERICAN INTERESTS IN CHINA.

[From report by U. S. Consul at Chefoo.]

In the province there are altogether 165 American men, women, and children, all of whom, except one mercantile house (L. H. Smith & Co.) and the members of this consulate, are connected with the various missions.

L. H. Smith & Co. are general agents trading in coal, doing commission work and banking. They virtually control the trade with Russia.

The missionaries are located in Chefoo, Chiningchou, P'angchiachuang, Taianfu, Weihsien, Ichowfu, Chuanfu, Tungchow, Shupei, Hwanghsien, Linghingcho, and Pingtu. To them we owe most of our knowledge of the interior. In their hospitals they treat annually 60,000 patients. Their modern dwellings and hospitals, supplied with all the latest appliances, in some cases heated with steam and lighted with electricity, their dress, food, and superior manner of living, can not but affect favorably the multitudes that come into contact with them in the scattered towns and cities of the interior, in which they live. The native, with this object lesson before him, in time shows a desire to own some of the things that he sees, and then a demand is created.

Since I arrived in China, in 1890, a gradual change for the better has spread over this vast Empire. In 1890 no native official would dream of calling in the services of a foreign medical man; to-day it is a common occurrence. There was then but one short line of railroad; now there are lines in several places, and many more being built or under consideration. There was then but one mill with foreign machinery, that at Ningpo; to-day at Ningpo there are several very large cotton mills, with the latest and best machinery, besides others near by. In Shanghai there are over 100 mills, and scattered all over the Empire tall chimney stacks loom on the horizon. Iron, steel, paper, cotton, in fact every description of a mill, is being erected. In 1890 not a steam vessel of any description was allowed to run in any waters except at the treaty ports; now the rivers are covered with small steamers and steam launches. Telegraph lines run through the most anteforeign provinces.

In 1890 I had a long conversation with a high native official who had then just returned from Hunan, where he had tried unsuccessfully to run telegraph lines under imperial authority. He had to flee for his life, and the telegraph material was destroyed. To-day that province is eagerly pushing forward enterprises of all kinds; schools for the teaching of English are to be found everywhere, thousands of miles from the coast; the electric light is used; bicycles are common; the foreigner is no longer stoned or reviled. For fifty years the missionary has been abused and massacred, but his day has come. He no longer needs go to the Chinaman; the Chinaman now goes to him, perhaps not for religious instruction, it is true, but for advice and to learn modern sciences, inventions, and languages. Thus to-day, in spite of the great disadvantages China is now under, we find a great and growing market for our products and manufactures.

In 1890 there was but one store in China where I could purchase American canned goods, confections, groceries, butter; to-day there is not a store that sells canned goods, dry provisions, or groceries that does not carry a full line of American goods, and many of them—German, Chinese, and English—have larger and better supplies of that character from the United States than from Europe.

In 1890 there was only one line of steamers from the American continent to Shanghai, China—the Canadian Pacific, running a few old ships about once a month; to-day the Canadian Line runs the magnificent Empress steamers. Besides, there are the lines from Tacoma, Portland, Oreg., and San Francisco, and the Japanese Line, and another is shortly to be added.

In 1890 a traveler from the United States was a novelty; now not a week passes but away up here in Chefoo we see three or four.

In 1890 there was not a single American life-insurance company doing business in China; to-day nine-tenths of that business is in the hands of American (New York) companies; and scattered all over the Empire are American engineers, mining experts, prospectors, and men experienced in making steel, in Chinese employ.

Our friends can say what they may, but to-day the American influence in China in all sound business schemes is felt as it never was before, and those men who sit in their offices in New York, San Francisco, or Pittsburg owe whatever prospects they have in China to the American missionary.

While the prestige of the United States has grown wonderfully since 1890, it has not had the increase that it ought to have.

In order to hold our own, we ought to have a consul in every port in China and not a single foreigner in the consulate except the Chinese clerks.

We ought to have commercial museums at Canton, Shanghai, Tientsin, and Hankau similar to that at Caracas, Venezuela. The National Association of Manufacturers of the United States can find no better field in the world now than China. We ought to have, as every consul in China has advocated, a newspaper. Every newspaper in China is owned by Englishmen or Chinese.

To my mind, nothing would help our merchants and manufacturers as much as the following plan:

Let all the boards of trade, chambers of commerce, export associations, and manufacturers' associations subscribe an annual sum, according to the interest they have in the Chinese trade, to establish showrooms, a paper, and a general information bureau in China.

The advertisements alone would pay for the paper, which must be an up-to-date daily, with all the latest American news. This paper would cost but little in China, each subscribing organization would receive a certain number of copies for the use of its members, the staff in China would be able to give information to the Chinese in regard to our goods, and the people at home could obtain the latest expert knowledge of the market here; Americans in China would have a meeting place or exchange, the expenses would be small pro rata, and the benefits would be incalculable.

With this organization in the field we could compete for the building all kinds of mills, mints, railroads, forts, ships, electric works, for furnishing supplies to the Government, for opening mines—in fact, we would be able to compete in enterprises of which we now know nothing. The Americans in China could cooperate. The English have a powerful society—in fact, two; one covering Shanghai, the other, the China Association, all China. This society is first, last, and all the time for British prestige and commerce; all the British merchants belong to it, and all old employees of the Chinese service in England; their head office is in London. This is the most powerful agent the British have; it watches the interests of the humblest merchant or British subject in China as jealously as it guards the great and princely houses. It is strange that Americans have no such organization.

HINDRANCES TO AMERICAN OIL TRADE IN CHINA.

(Consul Bedloe, of Canton, in Consular Reports 1898.)

A few suggestions as to the protection of trade in American oil in China are respectfully submitted for the benefit of our industries.

The recent discovery of petroleum in the very heart of China, in the rich and populous province of Szechuan, is reported by the Tientsin correspondent of the Hongkong Telegraph, as follows:

"Very rich petroleum wells have been found near Chungking, which suggest endless possibilities in this line alone. These oil wells are said to be far superior to those discovered in Kyaochau, and more important than any yet worked by native methods; but they need foreign capital and management, with which, it is thought, they will yield colossal quantities of oil. Of course what would be required to place the product on a sound commercial basis would be a big oil refinery."

This discovery is very important, and, in view of the oil wells in the Japanese island of Formosa, and of other oil wells near the German possession of Kyaochau, in the province of Shantung, our trade in American kerosene is bound to be affected, unless prompt efforts are made to control the output and, and if possible, the trade in the Chinese product.

We have already in this growing district of Canton—which has over three times the area and population it had in 1896, and which comprises the three provinces of Kwangtung, Kwangsi, and Yunan, with more than 80,000,000 of people—two powerful competitors in Russian and Dutch oils, as will be seen by the customs statistics of the trade at Canton. Until 1896 Dutch oil was unknown in China. It comes from Sumatra, and the Royal Dutch Petroleum Company is vigorously pushing it in Hongkong and Chinese coast ports, including the seven treaty ports in this consular district, viz, Swatow, Macao, Hoihow, Pakhoi, Canton, Samshui, and Wuchow. The inland waters of China were opened to the trade of all nations on June 1, 1898, and this extension of markets will afford greater facilities for increasing our commerce in China.

In 1896 the German agents for the Dutch oil purchased a site in Hongkong, built a pier for the use of tank steamers, and constructed several large reservoirs to store oil in bulk, as well as warehouses for canning and boxing the same. Our Dutch rivals in kerosene began to develop their enterprise with characteristic energy, and in 1897, after just one year, had such a demand, that it was necessary to run several tank steamers between Sumatra and Hongkong to supply the constantly increasing market in China for cheap oil. Previous to the erection of these tanks by the Royal Dutch Petroleum Company oil was imported in cases of two cans each.

In these oil works in Hongkong there were canned in 1897 upward of 2,600,000 gallons of oil for the Canton market alone. Customs returns show 2,025,780 gallons of American oil imported into Canton between January, 1894, and January, 1897. Of Russian oil there were imported during the same period 2,703,320 gallons.

The Dutch oil is an inferior article, and much cheaper, of course, than that from America. It is well known that large quantities of Dutch oil are being palmed off on the unsuspecting Chinese as genuine American kerosene. It is canned in Hongkong in old American tins that are bought throughout China for that purpose at 10 cents a tin and are marked with popular American trade-marks of various kinds. The Chinaman is a practical business man, and if he can buy Dutch or Russian oil, or, as is frequently the case, a combination of both these smoky, inflammable, and dangerous oils, made up in a way that will enable him to sell it in China as American "Brilliant," "Comet," "Sunlight," or other popular brands, and at a lower price than the genuine article, he will, of course, jump at the opportunity. At Wuchow (opened to trade in June, 1897), British, German, and other agencies were soon established, and besides "pushing" piece goods, thread, cheap lamps, matches, etc., they introduced Russian and Dutch oil into the innumerable cities, towns, and villages on the great West River and its various branches, where our oil had held the market until last year.

The whole of the great West River and all the inland waters of China are now open to the navigation and the trade of all nations. American exporting firms can establish agencies in the great trade centers of this vast district, which has more than 1,000 miles of seacoast, including the large Island of Hainan, and which extends into the interior as far as Thibet, a distance of over 2,000 miles. This territory is larger in area and in population than that of Austria, Germany, France, and Spain combined, and probably will be as important to United States trade.

The United States is fully able to supply the demands of this great market, and vigorous efforts should be made to do so. We have active and determined competitors in the field. For many years our oil producers supplied China's millions. We can now send our oil hundreds of miles into the interior under the American flag. We should hasten to avail ourselves of this opportunity. With increased competition should come increased effort.

American trade with the far East in recent years has not, in certain lines, increased as rapidly as has that of other countries. In no branch of commerce is this more evident than in oil. In 1894 imports into Shanghai in this line were:

	Gallons.
American oil	36,241,924
Russian oil	4,059,700
Dutch oil	Nil.

In 1897 our oil remained about the same, while Russian oil rose to over 20,000,000 gallons, and Dutch oil, of which there were no exports in 1894, rose to 1,581,000 gallons in 1896 and to 5,570,400 gallons in 1897.

Notwithstanding the great increase in the demand in China during the past four years we have not received our share of the oil trade.

The Dutch product has advantages in freight and difference in exchange. The points whence American oil is shipped to the far East are thousands of miles away. Would it not be advisable to select some point on the Pacific coast for the export of oil to China? We could ship oil in tank steamers across the Pacific to the Chinese markets quicker and cheaper than is possible by sailing ships as at present. The old methods were good when we monopolized the market; now, however, we must find better ones.

NEED OF AN AMERICAN EXPOSITION AND WAREHOUSE IN CHINA.

(From Advance Sheets, Consular Reports 1899.)

Under date of November 19, Consul-General Goodnow, of Shanghai, writes to a correspondent in New York as follows:

I sincerely hope that an American-Chinese exposition will be established in Shanghai. In my report dated April 5 I said:

I would suggest to other American manufacturers looking to the Chinese trade, as well as to the cycle makers, the advisability of establishing a permanent exposition in Shanghai for American goods. Practically all foreign trade for the middle and north of China goes through Shanghai. An exposition here will reach the trade of the Yangtze Valley and of the north.

The customs report of 1897 shows that in many important products the imports from the United States have increased at the expense of imports from other nations. We are nearer to the market, freights are accordingly less, and the feeling of the Chinese people is more friendly to Americans than to the people of any other nation. Now is the time to push our trade on this coast. I do not believe that any other method will give better or more permanent results than an exposition of United States products at Shanghai.

The rapidly moving events of the past year have still more confirmed me in my belief in the advisability of such an exposition of our goods. It will surely pay indirectly through an increase of trade to the exhibitors, and I believe it will pay directly in dividends to the stockholders. It should be built in consultation with the United States authorities, and, if possible, an arrangement should be made by which the consulate-general would be in the exposition building. It ought to be located in the American settlement and become American headquarters, and everything done to emphasize its national character.

I need not impress it upon you that Americans must now push more strongly than ever for the trade of China. You have seen the situation, its possibilities, and dangers. If the trade goes into other hands now it is lost to us for many years to come. Most of our manufacturers, having had a sufficient home market (which is the best in the world), have not felt the necessity of reaching out for this, our next best market, and one yet to be developed. They have been content to do business in a half-hearted way in Asia, and have not taken the trouble to make themselves acquainted with the banking methods, the shipping methods, the various laws in force, the climate, the superstitions, and the details of the needs and customs of the people. In cases which have been brought to my knowledge manufacturers of cotton goods have refused to make any except the width which is best suited for American markets, although the demand here is for another width. This is a peculiar people, who will buy nothing if they can not get exactly what they want, put up and labeled as their customs and superstitions dictate. The supply must fit the demand.

Our people do not realize their opportunities here. A Chinese viceroy, who is considered antipathetic, stated a few days ago that he was always willing to have Americans come into his viceroyalty to open mines, establish manufactures, and do any kind of business, but he did not want other foreigners. "But," he said, "Americans do not ask for these things, while other foreigners are always asking for them."

An exposition here will increase the variety of our trade, which is now largely in a few great staples only. Many of our important manufactures are unrepresented here. You can not buy an American hat in Shanghai. I know of only one store where American shoes are sold, and it has very few for ladies. Collars, stockings, ties, and like articles of gentlemen's wearing apparel of American make are not found in Shanghai. House furniture is very costly, and none comes from America. American underwear can not be bought here, except the coarsest kind. The American magazines are not for sale and do not come here, unless ordered from home. Practically all the books are of English print and are very expensive. A paper-bound book which can be bought at home for from 10 to 25 cents costs \$1.50 Mexican, or 72 cents gold. I asked a member of one of the book firms why he did not bring in some of the cheap American books. He answered: "We are a British firm and prefer to handle British goods." On the other hand, an agent of an American manufacturer said to me: "I would as quickly put my goods into the hands of a German, Englishman, or any other foreigner as into the hands of an American. I have no nationality in business." The shortsightedness of this arises from the fact that those very agents to whom he gave his products for sale have a national feeling in their business, and always, on even terms, push the products of their own country. English prefer to do business with English, Germans with Germans, and French with French; but Americans in this part of the world are lacking in national business pride, and have suffered for it. No European will sell an American manufacture unless he can make much more money out of it than he could from similar goods from his own country. If American manufacturers expect to handle this market as their situation entitles them to do, they must be represented here by Americans. A long step toward this would be the exposition.

I might multiply instances of American business which is done here by men of other nationalities. A leading American commercial body is to-day represented in China by a German, an able, scientific man; but his friends, his thoughts, and his ambitions are all German. Our steel manufacturers are all represented here by firms of foreign nationality, as is also true of our steamship lines. The bulk of our cotton goods is handled by firms of other nationality. Even some of our American firms are officered by Englishmen; and I was told within the week by the head salesman of an American firm, himself an Englishman, that none but the coarsest prints were made in America—that it was necessary to go to England for fine prints.

There is another side of this matter. The Chinese know only the man with whom they come directly in contact. They do not look to the original makers or sellers of the goods, but to the agent whom they personally know. When they become accustomed to trading with a particular man and have found him reliable, they are easily moved by him to take other brands of goods than those

they have been buying upon his assurance that the new brand is better than the one which they have been using. It will be easily seen from this what power to divert our trade we put into the hands of a foreign agent.

Should this exposition be undertaken, the Chinese merchants who are tributary to Shanghai (and that includes middle and northern China) can see for themselves the modern appliances for which America has become famous. The Chinese are now buying bicycles and phonographs in large quantities, and none were sold until samples were brought here and exhibited. We can not expect to sell our goods here on description. It seems to me that an exposition at Shanghai is almost necessary to direct connection between the American manufacturer and the Chinese merchant and consumer.

HONGKONG.

BUSINESS CONDITIONS AND THE OPENINGS FOR GOODS FROM THE UNITED STATES.

[Consul Wildman in Commercial Relations.]

Hongkong being a free port, precise returns of trade can not be compiled, owing to the absence of any statistics of imports and exports, with the single exception of opium.

SHIPPING.

The international importance of Hongkong among the shipping points of the world is shown by the fact that during the year 1896 34,526 vessels entered the ports of the colony, with a total tonnage and cargoes of 8,051,085 tons. Of this number, 56 were American, with a total tonnage of 87,872 tons, as against 3,230 British ships, total tonnage 4,382,546. Of German vessels, 721 entered; of Norwegian, 130, and of French, 120. I have not mentioned the Chinese vessels, which number nearly 30,000.

In order to compare the standing of the port of Hongkong with that of other great ports, it is interesting to note that the total tonnage entering and clearing at Hongkong in 1895 (exclusive of local trade) exceeded the tonnage of 1894 (exclusive of coasting trade) by 775,706 tons; also that, excluding the junk trade, the tonnage in 1895 exceeded the 1894 tonnage at Liverpool (exclusive of coasting trade) by 1,636,008 tons, and of Cardiff by 1,647,195 tons.

IMPORTS.

In 1895, an attempt was made by the harbor master of the colony to prepare a tabulation of imports and exports by name and amount. Although I am informed by leading merchants that it is far from correct, I include it, as showing the articles that are most in demand here and the approximate consumption.

Articles.	Tons.	Articles.	Tons.
Beans	3,848	Opium	2,464
Bones	2,340	Pease	1,060
Coal	536,767	Rice	764,368
Coffee	500	Salt	6,250
Cotton	50	Sandalwood	1,262
Ebony	400	Sapan wood	600
Flour	101,767	Sulphur	500
Hemp	1,200	Sugar	185,616
Kerosene (bulk)	24,450	Tea	20
Kerosene (cases)	42,601	Timber	26,389
Lead	1,350	Vermicelli	800
Oil	3,348	General	1,026,064

Total accounted for, 2,760,954 tons.

It is interesting to note that two of the largest imports into Hongkong are from the United States, namely, flour (mostly Pacific coast), 101,767 tons, which is an increase of 41,517 tons over the previous year; and kerosene, 67,051 tons. Our kerosene oil has held its own since 1890, against the determined attempts of Russian producers to capture the market with a cheaper and inferior article. No oil is too good for the Chinese.

A committee appointed to inquire into the condition of British trade in Hongkong reported on June 6, 1896, stating, among other things: "In this connection the committee wishes to make special reference to the advantages conferred on American cotton piece goods in the China market by the rate of freight charged by the conference steamers from New York to Hongkong and Shanghai, which averages from 25s. to 30s. (\$6 to \$7.30) per ton as compared with 57s. 6d. (nearly \$14) from London and Liverpool outward." The same remarks apply to the shipment of machinery from the United States to China, the freight for which is about 40 per cent lower than that from British ports.

It is evident that other European-made goods are displacing in many directions British goods. This is brought about by German, Belgian, and Japanese firms having representatives on the ground to study the needs and demands of the market, these firms sending consignments on trial and keeping up the quality of the goods. The great trouble in introducing American goods into these markets is the indifference and lax business methods of the Americans themselves. There is a good market here for California wines, Pacific coast redwood and pine, and a limited market for American whisky. The trouble with the introduction of California wines has been that our exporters send a low-grade wine to compete with a good grade French and Italian. There is almost no demand on this coast for a cheap wine. The people want the best and can afford to pay for it. I know of a small shipment of high-grade California wine that was sent on trial to this coast. It met with universal commendation, and a large order was sent to San Francisco in consequence. The second order came and it was absolutely bad. People commented on it as an example of Yankee sharpness. There never has been a third order.

Regarding lumber, which is one of the principal imports, there would be no trouble at all in introducing our best grades if some broad-minded exporter would send a shipment subject to approval. A case has been cited to me where an entire shipload was ordered by one of the largest firms here, with the proviso that it should come up to a very modest standard. The American firm refused to fill the order unless it could draw against it on board ship in San Francisco. Naturally, the buyer refused to take all the chances. Regarding the so-called American whisky that comes to this coast, it ought to be forbidden export by our port officials. It is bad enough for the days of 1849, and yet Americans wonder why our wines and liquors are not popular on this coast.

There is no use in writing report after report, filled with suggestions as to how to capture the Asiatic trade, when our people practice such frauds. There is, of course, another side. Often our goods are too good for the market, or too heavy, like cotton goods, shoes, leather articles, etc. In other words, they are not suitable to this climate. As before said, there are instances in which British manufactures have been entirely ousted by foreign goods, as in the case of llama braids and aniline dyes, while others, such as Spanish stripes and broadcloths, have been in great measure replaced by similar goods imported from Germany.

In other cases, there have been attempts to cut into British trade by foreign imitations, with only a qualified or temporary success. These articles are represented by hosiery, lamps, paper, umbrellas, rubber shoes, soaps, biscuits, beer, locks, files, needles, cutlery, etc., in which Germany and Japan are the principal competitors. Germany is also competing to supply the colony with gold, being greatly aided by lower freight rates from German ports. Belgium supplies most of the bar iron, nail, rod, and scrap iron, and window glass; Australia sends pig lead; Japan supplies cotton waste, washing soda, and sulphuric acid, and is competing in cotton goods, paper, ships, lanterns, and cheap substitutes for cretonnes, blankets, towels, soaps, etc. Among other items, Japan is exporting well-made cotton half hose 50 per cent below the cost of similar goods from Germany; and Japanese cement, though inferior in quality, is cheaper than any European cement that can be imported. From these examples, it will be seen that there is an open field here for all the world, and that other nations are taking advantage of it. Only the disinclination of American manufacturers to study the taste of the consumer keeps them out. Everything is in their favor—a free port, connected with San Francisco by two regular lines of steamers, with Tacoma by one, and with Vancouver by one. No licenses are required for carrying on legitimate business, except a nominal one for hawkers and rickshaws, and there are no regulations of a discriminating character that affect American vessels.

EXPORTS.

As to goods exported from Hongkong to the United States, I can not do better than make a sample exhibit of the digest of the consular invoice book for the fiscal year ending June 30, 1897:

Articles.	Value (gold).	Articles.	Value (gold).
Aniseed oil.....	\$51,390	Preserves.....	\$28,875
Bustles.....	8,610	Provisions, Chinese.....	130,950
Cassia.....	89,555	Rattan and ware.....	20,355
Cassia oil.....	95,315	Rice.....	427,995
China ware.....	12,630	Sauce, Chinese.....	10,730
Clothing.....	96,970	Shoes, Chinese.....	29,730
Essential oil.....	21,985	Silk piece goods.....	43,930
Fans.....	3,495	Sugar, refined.....	321,260
Firecrackers.....	49,125	Tea.....	105,795
Flour.....	23,495	Tobacco.....	34,900

Medicines.....	18,360	Wood and wooden ware.....	10,755
Oil, peanut.....	103,315	Sundries.....	35,050
Opium, prepared.....	65,600	Total.....	1,950,785
Paper.....	16,375		

CURRENCY.

The currency of Hongkong is on a silver basis, and the low price of silver, taken in connection with daily fluctuations of the silver dollar from 43 to 46 cents gold, has had, it is claimed by merchants, a disastrous effect on trade. The newspapers here are now advocating the adoption of a gold currency, but it is pointed out that such a measure will be a very much greater experiment here than in Singapore or Japan, as Hongkong stands at the portal of the greatest silver-using nation in the world—China—a nation that from its very unwieldiness and vastness could not lay down new currency laws with any hope of their becoming effective within the next decade.

I think, however, that the question will have the early consideration of the colonial legislature. The matter will be watched with interest by all.

POSTAL RATES.

The postage rates in Hongkong are as follows (Mexican currency):

	Letters, per one- half ounce.	News- papers, per 2 ounces.
	Cents.	Cents.
Union countries.....	10	2
Nonunion countries.....	10 to 20	2 to 5
Local.....	2	2

The mail is delivered by Government carriers at Government expense.

QUARANTINE.

The quarantine regulations are much the same as those of any other great port. Ships with infectious or contagious diseases aboard are compelled to go to the quarantine station, while persons aboard are sent to the hospital ship *Hygeia*. The regulations are strictly enforced and have proven effective.

THE PORT OF SHANGHAI AND THE TRADE OF CHINA.

The port of Shanghai having two-thirds of the entire foreign imports into China, the following statement of its commerce and carrying trade, by the United States consul-general at that point, is republished from the United States Consular Reports, 1896:

As China comes more under the influence of western civilization and commercial enterprise, Shanghai will increase in importance as a distributing center of foreign trade. It is now the commercial capital of the Empire, and it will then be a center of political, military, and diplomatic influence. At present it is a port of call for tourists and the starting point for all who, for pleasure, information, or business, seek to penetrate the interior of China. In this respect the unique position of Shanghai lends importance to the inquiry as to how the visitors and settlers from Europe and America are conveyed to China, and the routes likely to be patronized in the future.

There are at present eight steamship companies engaged in this passenger traffic: The Peninsular and Oriental Steam Navigation Company (British), the Compagnie des Messageries Maritimes (French), the North German Lloyd (German), the Austrian Lloyd (Austrian), the Canadian Pacific (British), the Pacific Mail, and the Occidental and Oriental Steamship Company.

The Peninsular and Oriental Steamship Company possess a fleet of fifty-five vessels (including seven now building or fitting out), with a total registered tonnage of 264,257 tons. This company maintains a fortnightly service to Shanghai, but passengers coming hither by it from Europe have to be transferred at Colombo from the best ships of the fleet to others of smaller dimensions and inferior accommodations, but fairly comfortable.

The Messageries Maritimes have a fleet of fifty-nine vessels, with a total gross tonnage of 195,933 tons. They render a fortnightly service between Marseilles and Shanghai, alternating with the Peninsular and Oriental. But the Messageries Maritimes passengers are not subjected to the inconvenience of a transfer from one ship to another. With the exception of the *Ernest Simons*, the tonnage of the French vessels employed on the China route does not exceed 4,259 tons.

The North German Lloyds have a fleet of thirteen vessels, with a total registered tonnage of 213,351 tons. Of this fleet, nine come to Shanghai from Bremen, their tonnage ranging from 5,316 to 6,613. The service is monthly.

The Austrian Lloyds have a fleet of seventy-four vessels, with a total gross tonnage of 138,273 tons. The service of this line to Shanghai, which is also monthly, is performed by eleven ships, of which the *Marquis Bacquehem* has the highest tonnage (4,409) and the *Berenice* the lowest (2,625). The service is an accelerated one between Trieste and Bombay, where passengers to China are transferred to one of the eleven ships referred to.

In addition to the first-class companies conveying mails and passengers to and from Europe through the Suez Canal, there are four others on the same route, which, while chiefly carrying freight, afford passenger accommodations to a limited extent. They are the Glen Line, the Shire Line, the Ocean Steamship Company (Blue Funnel Line), and the China Mutual.

Regular direct communication between Shanghai and the American continent is maintained by the three steamers of the Canadian Pacific Railway Company—*Empress of India*, *Empress of China*, and *Empress of Japan*, all three of 6,000 tons. The service performed by this line consists of fifteen voyages each way in twelve months.

From the foregoing it will be seen that the passenger traffic to Shanghai is well catered for by the leading European countries and Canada, and, in this connection, it may be pointed out that the first-class steamship companies named are subsidized by their governments, who do all in their power to foster the carrying trade under their respective flags.

With reference to vessels flying the American flag, the facts are: There are three American steamship companies carrying mails and passengers across the Pacific to China—two from San Francisco, viz, the Pacific Mail and the Occidental and Oriental, which, however, have a working arrangement which makes their interests identical, and the Northern Pacific Steamship Company, whose port of departure is Tacoma.

Not oftener than once a year has a steamer of the San Francisco lines anchored off Woosung or Shanghai. Indeed, it is not easy to obtain reliable information here about them, the agency being in the hands of a Japanese steamship company, the Nippon Yusen Kaisha.

The Pacific Mail and the Occidental and Oriental have between them a fleet of eight ships, several of which are as fine as those of any line, large, and all comfortable, but the aggregate gross tonnage I do not know. These steamers bring passengers and mail to Japan, where those destined for Shanghai are transferred to the steamship lines from Japan to Shanghai.

The Northern Pacific (Tacoma) Company have a fleet of three vessels of a gross tonnage of 9,310 tons; to these must be added two chartered steamers, and there is a prospect of the fleet being increased at an early date. These steamers, however, only call at Shanghai during the summer months, when inducements are offered, the prescribed route being Tacoma, Victoria, British Columbia, Yokohama, Kóbé, and Hongkong. During the winter they never touch at Shanghai, and homeward passengers are not even booked from here, but have to find their way first to Japan as best they can.

That the future route to China, with or without the Nicaragua Canal, will be across the Pacific is a fact admitted here even by persons interested in and connected with the carrying trade through the Suez Canal. The question is into whose lap the fruit now ripening will drop. Every natural advantage is on the side of America. The Canadian Pacific steamers accomplish the voyage from Vancouver to Shanghai in nineteen days, and could reduce the time to seventeen. The Tacoma and San Francisco lines should be able to make equally good time. The time required to Marseilles, via the Suez Canal, is thirty-three days. A passenger bound from Shanghai to London, via Vancouver, over the American continent and across the Atlantic, would reach his destination four days earlier than if he traveled by way of the Suez Canal. The fares by the Pacific route compare favorably with those of the British and French lines, and could possibly be still further reduced, for the North German Lloyd Company states that passengers to China from Europe by way of America can obtain through tickets in Bremen at prices considerably lower than those charged in New York.

It would seem from the above facts that the time has come when something should be done to modify the present disparity between the United States and European countries in the carrying trade of Shanghai. Freight will follow in the wake of passenger traffic, and it should be remembered that half of the whole trade of China in foreign vessels is credited in the official returns to Shanghai.

POPULATION OF PRINCIPAL CITIES OF CHINA.

[From Century Dictionary and Cyclopedia.]

LEASE OF KIAO-CHOU TO GERMANY. DETAILS FROM OFFICIAL REPORTS.

Consul Fowler, of Chefoo, in August, 1898, forwarded to the State Department the following official reports relating to the seizure and subsequent lease of Kiao-Chow Bay and vicinity, saying that the exclusive mining and railroad privileges granted in Shantung province are very valuable.

GERMANY'S PROCLAMATION.

[Translated from the Chinese.]

A PROCLAMATION ISSUED BY ADMIRAL VON DIEDERICH, COMMANDING HIS IMPERIAL GERMAN MAJESTY'S NAVAL FORCE ON THE ASIATIC STATION.

To all concerned, with reference to a cession (of territory).

I, high commissioner, in obedience to the commands of His Imperial German Majesty, have landed a force of marines, and have taken and occupied Kiao-Chow Bay, with the cluster of islands to the left, within the boundaries as set forth below:

On the west, in a straight line from the coast through Tungshan to a point 18 li (7½ miles) from Kiao-Chow, on the west at high tide; thence in a northerly direction to Tapuerh, where a custom-house is situated; thence to the confluence of the two rivers Kiao and Ta-koo, and proceeding eastward to the seacoast and on to the center of Laoshan Bay; the eastern boundary to run from the said center southward to the Chia Ti and Chalien islands.

The above-described territory is to be held by Germany for occupation, owing to the murder of German missionaries in the province of Shantung; and, as it is but right that China should be called upon to make due reparation, the said territory is therefore taken as a guaranty that it will be given as my Government may desire.

This proclamation is accordingly issued for general information, and merchants and others of the various towns in Ch'ing Tao are expected to understand that they are to pursue their usual avocations, and not give a willing ear to the inflammatory rumors of evil doers.

I also have to observe that relations of amity and friendship have always existed between my Empire and China, and, in the interruption of peace some days since, Germany made every effort in coming to the rescue, exhibiting thereby a spirit of neighborly friendliness.

The landing of a force at present must not be construed as an act of hostility to China, and you need not harbor any misgivings or suspicions (on this point); moreover, it will be the duty of the officials of my Government to protect all law-abiding people, to the end that tranquillity and peace may be attained. On the other hand, severe punishment, in accordance with Chinese law, will be inflicted on all evil doers creating a disturbance. Should there be any fierce ruffians daring to injure German subjects (or interests), it will rest with Germany to take measures for their protection, and no interference will be permitted. A willful violation of this not only will be of no advantage, but calamity may overtake the evil doer.

The officers of the Chinese Government will, however, still continue to exercise their official functions within the territory occupied by German forces; but hereafter, should there be appeals and for cases which can not be disposed of by them, they should be presented to the governor and the brigadier-general at the military yamèn for their attention and adjustment.

As regards the buying and selling of land, it will not be permitted unless the sanction of the governor be first obtained.

GERMAN EMPIRE, October 19, 1897.

Proclamation posted at the port of Kiao-Chow.

STATEMENT OF THE CHINESE GOVERNMENT.

[Extract from Shanghai Gazette of May 30, 1898.]

The following is a translation of the official memorandum of the Tsungli Yamèn with reference to the settlement of the German claims in Shantung:

An amicable arrangement of the missionary troubles at Tsaichowfu, Shantung, having been arrived at by Germany and China, the two powers immediately interested, China makes the following concessions as a mark of friendly feeling toward Germany, in the hope that the good relations existing between the two countries may always continue, that they may become more intimate, and that

their mutual commerce may expand and prosper to their mutual advantage. The first concession is the leasing of Kyao-chau and adjacent territories to Germany, to which the following conditions appertain:

I. His Majesty the Emperor of China, being desirous of preserving the existing good relations with His Majesty the Emperor of Germany and of promoting an increase of German power and influence in the Far East, sanctions the acquirement under lease by Germany of the land extending for 100 li at high tide (at Kyao-chau).

His Majesty the Emperor of China is willing that German troops should take possession of the above-mentioned territory at any time the Emperor of Germany chooses. China retains her sovereignty over this territory, and, should she at any time wish to enact laws or carry out plans within the leased area, she shall be at liberty to enter into negotiations with Germany with reference thereto; provided always that such laws or plans shall not be prejudicial to German interests. Germany may engage in works for the public benefit, such as waterworks, within the territory covered by the lease, without reference to China. Should China wish to march troops or establish garrisons therein she can only do so after negotiating with and obtaining the express permission of Germany.

II. His Majesty the Emperor of Germany being desirous, like the rulers of certain other countries, of establishing a naval and coaling station and constructing dockyards on the coast of China, the Emperor of China agrees to lease to him for the purpose all the land on the southern and northern sides of Kiao-Chou Bay for a term of ninety-nine years. Germany is to be at liberty to erect forts on this land for the defense of her possessions therein.

III. During the continuance of the lease China shall have no voice in the government or administration of the leased territory. It will be governed and administered during the whole term of ninety-nine years solely by Germany, so that the possibility of friction between the two powers may be reduced to the smallest magnitude. The lease covers the following districts:

(a) All the land in the northeast of Lienhan, adjacent to the northeastern mouth of the bay, within a straight line drawn from the northeastern corner of Yintao to Laoshanwan.

(b) All the land in the southwest of Lienhan, adjacent to the southern mouth of the bay, within a straight line drawn from a point on the shore of the bay bearing southwest by south from Tsipeshan.

(c) Tsipeshan and Yintao.

(d) The whole area of the bay of Kiao-Chou covered at high water.

(e) Certain islands at the entrance of the bay, which are ceded for the purpose of erecting forts for the defense of the German possessions.

The boundaries of the leased territory shall hereafter be more exactly defined by a commission appointed jointly by the Chinese and German Governments and consisting of Chinese and German subjects. Chinese ships of war and merchant ships and ships of war and merchant ships of countries having treaties and in a state of amity with China shall receive equal treatment with German ships of war and merchant ships in Kiao-Chou Bay during the continuance of the lease. Germany is at liberty to enact any regulations she desires for the government of the territory and harbor, provided such regulations apply impartially to the ships of all nations, Germany and China included.

IV. Germany shall be at liberty to erect whatever light-houses, beacons, and other aids to navigation she chooses within the territory leased and along the islands and coasts approaching the entrance to the harbor. Vessels of China and vessels of other countries entering the harbor shall be liable to special duties for the repair and maintenance of all light-houses, beacons, and other aids to navigation which Germany may erect and establish. Chinese vessels shall be exempt from other special duties.

V. Should Germany desire to give up her interest in the leased territory before the expiration of ninety-nine years, China shall take over the whole area and pay Germany for whatever German property may at the time of surrender be there situated. In case of such surrender taking place, Germany shall be at liberty to lease some other point along the coast. Germany shall not cede the territory leased to any other power than China. Germany shall pay a reasonable price to the native proprietors for whatever lands her Government or subjects require.

The second important concession by China to Germany is the railway and mining concession, the principal provisions of which are as follows:

I. The Chinese Government sanctions the construction by Germany of two lines of railway in Shantung. The first will run from Keao-Chou and Tsinan-fu to the boundary of Shantung province, via Wei-hsien, Tsinchow, Pashan, Tsechuen, and Suiping. The second line will connect Keao-Chou with Chinchow, whence an extension will be constructed to Tsinan through Laiwuhsien.

II. In order to carry out the above-mentioned railway works, a Chinese-German company shall be formed, with branches at whatever places may be necessary, and in this company both German and Chinese subjects shall be at liberty to invest money, if they so choose, and appoint directors for the management of the undertaking.

III. All arrangements in connection with the works specified shall be determined by a future conference of German and Chinese representatives. The Chinese Government shall afford every facility and protection and extend every welcome to representatives of the German railway company operating in Chinese territory. Profits derived from the working of these railways shall be justly divided pro rata between the shareholders without regard to nationality. The object of constructing these lines is solely the development of commerce. In inaugurating a railway system in Shantung, Germany entertains no treacherous intention toward China, and undertakes not to unlawfully seize any land in the Province.

IV. The Chinese Government shall allow German subjects to hold and develop mining property for a distance of 30 li from each side of these railways and along the whole extent of the lines. The following places where mining operations may be carried on are particularly specified: Along the northern railway from Keao-Chou to Tsinan, Wei-hsien, Pa-shan-hsien, and various other points, and along the southern Keao-Chou-Tsinan-Chinchau line, Chinchau-fu, Laiwuhsien, etc. In trying to develop mining property in China, Germany is actuated by no treacherous motives against this country, but seeks solely to increase commerce and improve the relations between the two countries.

If at any time the Chinese should form schemes for the development of Shantung, for the execution of which it is necessary to obtain foreign capital, the Chinese Government, or whatever Chinese may be interested in such schemes, shall, in the first instance, apply to German capitalists. Application shall also be made to German manufacturers for the necessary machinery and materials before the manufacturers of any other power are approached. Should German capitalists or manufacturers decline to take up the business, the Chinese shall then be at liberty to obtain money and materials from other nations.

THE CHINESE EMPIRE.

ITS GOVERNMENT, AREA, POPULATION, RELIGION, INSTRUCTION, FINANCE, DEFENSE, PRODUCTION, INDUSTRIES, COMMERCE, INTERNAL COMMUNICATION, MONEY, WEIGHTS AND MEASURES.

[From Statesman's Yearbook, 1898.]

Tsait'ien, Emperor—*Hwangti*—of China; was born 1871; the son of Prince *Ch'un*, seventh brother of the Emperor *Hien-Fêng*; succeeded to the throne by proclamation, at the death of Emperor *T'ung-chi*, January 22, 1875, reigning under the style of *Kwangsi*, the ninth Emperor of China of the Manchu dynasty of Ts'ing, which overthrew the native dynasty of Ming in the year 1644. There exists no law of hereditary succession to the throne, but it is left to each sovereign to appoint his successor from among the members of his family of a younger generation than his own. The late Emperor, dying suddenly in the eighteenth year of his age, did not designate a successor, and it was in consequence of arrangements directed by the Empress Dowager, widow of the Emperor *Hien-Fêng*, predecessor and father of *T'ung-chi*, in concert with Prince *Ch'un*, that the infant son of the latter was made the nominal occupant of the throne. Having become of age, the young Emperor nominally assumed government in March, 1887, but did not assume full control of the Government till February, 1889, when the Empress Dowager withdrew. [NOTE.—The Emperor on September 22, 1898, resigned his power to the Empress Dowager, who resumed the conduct of the affairs of the Empire.]

GOVERNMENT.

The laws of the Empire are laid down in the *Ta-ts'ing-hwei-tien*, or "Collected Regulations of the Ts'ing dynasty," which prescribe the government of the State to be based upon the government of the family.

The supreme direction of the Empire is vested in the *Chün Chi Ch'u*, the Privy Council, or Grand Council. The administration is under the supreme direction of the *Nei-ko* or Cabinet, comprising four members, two of Manchu and two of Chinese origin, besides two assistants from the *Han-lin*, or Great College, who have to see that nothing is done contrary to the civil and religious laws of the Empire, contained in the *Ta-ts'ing-hwei-tien* and in the sacred books of Confucius. These members are denominated "*Ta-hsio-shih*," or ministers of state. Under their orders are the *Ch'i-pu*, or seven boards of government, each of which is presided over by a Manchu and a Chinese. These boards are: (1) the board of civil appointments, which takes cognizance of the conduct and administration of all civil officers; (2) the board of revenues, regulating all financial affairs; (3) the board of rites and ceremonies, which enforces the laws and customs to be observed by the people; (4) the military board; (5) the board of public works; (6) the high tribunal of criminal jurisdiction; and (7) the admiralty board at Tientsin, established in 1885.

Independent of the Government, and theoretically above the central administration, is the *Tu-ch'a-yuen*, or board of public censors. It consists of from 40 to 50 members, under two presidents, the one of Manchu and the other of Chinese birth. By the ancient custom of the Empire all the members of this board are privileged to present any remonstrance to the sovereign. One censor must be present at the meetings of each of the Government boards.

The *Tsungli Yamèn*, or foreign office, was created by a decree of January 19, 1861, and comprises among its members all those of the council of state and six other officials of the highest rank. It controls not merely the matters with foreign nations, but also those institutions in which foreigners form part of the working staff, such as the maritime customs, Peking University (*Tung Wên Kwan*), etc.

Local government.

Each of the 18 provinces is ruled by a governor or governor-general, who is responsible to the Emperor for the entire administration—political, judicial, military, and fiscal. He is assisted by a council and various other officials, such as the treasurer, the subcommissioner, and the literary chancellor. Each province is subdivided into departments ruled by prefects, and each department into districts, each with a district ruler. Two or more departments are sometimes united into a *tau*, the ruler of which is called a *tautai*. Each town and village has also its governing body, and among the various rulers there is regular gradation of rank, each being responsible to his immediate superior. Political office in the general administration of the Empire is less sought after than the position of viceroy or governor in the provinces, where the opportunities of acquiring wealth, not from official salaries, but from gifts, etc., are abundant.

AREA AND POPULATION.

Hitherto the population has been much overestimated. A recent estimate of the population of China proper will be found below. The following table gives a statement of the area and population of the whole of the Chinese Empire according to the latest estimates:

	Area.	Population.
	<i>Eng. sq. miles.</i>	
China proper	1,336,841	386,000,000
Dependencies:		
Manchuria.....	362,310	7,500,000
Mongolia	1,288,000	2,000,000
Tibet	651,500	6,000,000
Jungaria.....	147,950	600,000
East Tarkestan.....	431,800	580,000
Total	4,218,401	402,680,000

According to official data referring to 1842, the population of the 18 provinces of China proper and Formosa was 413,000,000; other estimates gave 350,000,000. In the following table the figures with an asterisk (*) are from Chinese official data for 1882; those with a dagger (†) have the population of 1879. Fukien is estimated on the basis of the census of 1844.

PROVINCES.	Area (English square miles).	Population.	Population per square mile.
Chili.....	58,949	17,937,000	304
Shantung.....	53,762	36,247,835	557
Shansi.....	56,268	12,211,453	221
Honan.....	66,913	22,115,827	340

The island of Formosa was ceded to Japan in accordance with the terms of the treaty of peace ratified and exchanged at Chefoo on the 8th of May, 1895. The formal transfer of the island was effected on the 2d of June, 1895.

In December, 1897, the Germans seized the port of Kiau-Chau, on the east coast of Shantung, and in January, 1898, obtained from the Chinese a 99 years' lease of the town, harbor, and district. The harbor of Port Arthur, by agreement with the Chinese Government, has been occupied by the Russians.

According to a return of the imperial customs authorities, the total number of foreigners resident in the open ports of China was 10,855 at the end of 1896. Among them were 4,362 British subjects, 1,439 Americans, 852 Japanese, 933 Frenchmen, 870 Germans, 871 Portuguese, 410 Spaniards, and 407 Swedes and Norwegians, all other nationalities being represented by very few members. About one-half of the total number of foreigners resided at Shanghai.

RELIGION.

Three religions are acknowledged by the Chinese as indigenous and adopted, viz, Confucianism, Buddhism, and Taoism.

The Emperor is considered the sole high priest of the Empire, and can alone, with his immediate representatives and ministers, perform the great religious ceremonies. No ecclesiastical hierarchy is maintained at the public expense, nor any priesthood attached to the Confucian religion. The Confucian is the State religion, if the respect paid to the memory of the great teacher can be called religion at all. But distinct and totally separate from the stated periodic observances of respect offered to the memory of Confucius as the holy man of old, and totally unconnected therewith, there is the distinct worship of heaven (t'ien), in which the Emperor, as the "sole high priest," worships and sacrifices to "heaven" every year at the time of the winter solstice at the Altar of Heaven, in Pekin. With the exception of the practice of ancestral worship, which is everywhere observed throughout the Empire and was fully commended by Confucius, Confucianism has little outward ceremonial. The study and contemplation and attempted performance of the moral precepts of the ancients constitute the duties of a Confucianist. Buddhism and Taoism present a very gorgeous and elaborate ritual in China, Taoism (originally a pure philosophy) having abjectly copied Buddhist ceremonial on the arrival of Buddhism one thousand eight hundred years ago. Large numbers of the Chinese in middle and southern China profess and practice all three religions. The bulk of the people, however, are Buddhist. There are probably about 30,000,000 Mohammedans, chiefly in the northeast and southwest. Roman Catholicism has long had a footing in China, and is estimated to have about 1,000,000 adherents, with 25 bishoprics besides those of Manchuria, Thibet, Mongolia, and Korea. Other Christian societies have stations in many parts of the country, the number of Protestant adherents being estimated at 50,000. Most of the aboriginal hill tribes are still nature worshipers, and ethnically are distinct from the prevailing Mongoloid population.

INSTRUCTION.

Education of a certain type is very general, but still there are vast masses of adult countrymen in China who can neither read nor write. There is a special literary class, who alone know the literature of their country, to the study of which they devote their lives. There are boarding schools and day schools for boys and young men, the latter being held in the entrance halls of temples and in the spare chambers of guilds, and in all the important cities there are colleges for training candidates for degrees. Examinations, mainly confined to moral philosophy and literature, are held in the prefectorial cities of each province twice in three years for the lower degree necessary as a passport to the public service, but of the six or seven thousand candidates who come forward not more than sixty can be admitted to the degree of literary chancellor. For the higher degree examinations are held in each provincial capital once in three years, and the successful candidates are subjected to a third and a fourth examination, those who finally emerge being divided into four classes to wait for appointments to offices of different grades. There are, however, other means (e. g., military service) by which such appointments may be obtained. In 1887, for the first time, mathematics were admitted with the Chinese classics among the subjects of examination, and schools for the propagation of western science and literature are now on the increase. The "Tung Wên Kwan," or College of Foreign Knowledge, at Pekin, is a Government institution, where the English, French, German, and Russian languages and mathematics, chemistry, physiology, etc., are taught by European and American professors, while the Chinese education of the pupils is intrusted to Chinese teachers. There are, besides, numerous Catholic and Protestant mission schools and colleges at

Shanghai and other ports, where the English language and lower branches of western science are taught. The Chinese Government has of late years established naval and military colleges and torpedo schools in connection with the different arsenals at Tientsin, Nanking, Shanghai, and Foochow, in which foreign instructors are engaged to teach such young Chinese as intend to make their career in the army or navy of their country western modes of warfare, besides western languages and literature. Seven Chinese newspapers are published at Shanghai, and the success they have achieved has led to the establishment of others at some of the other treaty ports.

FINANCE.

No general statement of the revenue and expenditure of China is made public, and such estimates as have been formed by Europeans are founded on financial reports of provincial governors published in the Pekin Gazette. Except the foreign maritime and a few native customs, the entire revenue is collected by provincial agents. The board of revenue at Pekin issues annually to each of the provincial governors a statement of the amount required from his province for the following year, and when to this amount is added the sum necessary for local administration, civil and military, the revenue to be provided by each collector is ascertained. The amount actually levied, however, greatly exceeds this, and the surplus, which may amount to 50 or 70 per cent of the total, disappears in the form of costs, or in presents to official superiors, or remains in the hands of the collectors. The following estimate, taken from a report by Consul Jamieson, of Shanghai, is based on figures for the three years preceding the Japanese war, and shows the sums accounted for by the provincial authorities:

SOURCES OF REVENUE.		Amount.
		<i>Taels.</i>
Land tax, silver.....		25,088,000
Land tax, grain.....		6,562,000
Salt duty and likin.....		13,659,000
Likin on merchandise.....		12,952,000
Foreign maritime customs (1893).....		21,989,000
Native custom-houses.....		1,000,000
Duty and likin on native opium.....		2,229,000
Miscellaneous duties.....		5,550,000
Total.....		88,979,000
BRANCHES OF EXPENDITURE.		Amount.
Remittances:		<i>Taels.</i>
Metropolitan administration, Manchu garrisons, and the imperial household.....		19,478,000
Board of admiralty (Peiyang squadron).....		5,000,000
Southern naval squadrons.....		5,000,000
Forts, guns, and coast defense.....		8,000,000
Defense of Manchuria.....		1,848,000
Kansuh and central Asia.....		4,800,000
Aids to Yunnan and Kweichow.....		1,655,000
Interest and repayment of foreign loans.....		2,500,000
Railway construction.....		500,000
Public works, river embankments, sea wall, etc.....		1,500,000
Customs administration, including maintenance of light-houses, beacons, and revenue cruisers.....		2,478,000
Administration of 18 provinces, including cost of troops.....		36,220,000
Total.....		88,979,000

The land tax varies in different provinces from 10d. or 1s. to 6s. 6d. or more per acre. The rate of incidence is theoretically fixed, but under other names additional taxes are imposed on land. Salt is a Government monopoly, all producers being required to sell to Government agents, who, at a price which covers the duty, resell to merchants provided with "salt warrants." Likin is a tax imposed on merchandise in course of transportation, payable at appointed barriers; with it is now united a producers' tax.

The collection of the revenue on the Chinese foreign trade and the administration of the lights on the coast of China are under the management of the imperial customs department, the head of which is a foreigner (British), under whom is a large staff of European, American, and Chinese subordinates, the department being organized somewhat similarly to the English civil service. It has an agency in London.

The receipts amounted to 7,872,257 haikwan taels, or £2,361,677 (ex. 6s.), in 1864, and, gradually increasing, have risen to 21,989,300 haikwan taels (including 5,362,733 taels, opium likin), or £4,329,143 (ex. 3s. 11½d.), in 1893; to 22,523,605 haikwan taels (including 5,050,303 taels, opium likin), or £3,601,430 (ex. 3s. 2½d.), in 1894; to 21,385,389 haikwan taels (including 4,104,145 taels, opium likin), or £3,497,402 (ex. 3s. 3½d.), in 1895; to 22,579,366 haikwan taels (including 3,919,759 taels, opium likin), or £3,763,227 (ex. 3s. 4d.), in 1896.

The existing debt of China has arisen almost entirely out of the recent war with Japan. In 1887 there was contracted a German loan of 5,000,000 marks in gold at 5½ per cent. In 1894 a foreign silver loan of £1,635,000 was raised at 7 per cent, and in February, 1895, a gold loan of £3,000,000, both on the security of the customs revenue, while other advances, on the same security, amounting to over £2,000,000 were obtained from local banks and foreign syndicates. Internal loans were also obtained amounting to nearly £5,000,000. The war indemnity to be paid to Japan amounted to 200,000,000 kuping, or imperial treasury, taels, and the compensation for the retrocession for the Leao-tong peninsula to 30,000,000 taels. Consequently, in 1895, another foreign loan was raised amounting to £15,820,000 at 5 per cent, and in March, 1896, an Anglo-German loan of £16,000,000 at 5 per cent was contracted. The outstanding amount of the foreign debt is put at about £38,800,000.

During 1897 negotiations were carried on for the issue of a new loan of £16,000,000, and had not been concluded in January, 1898.

DEFENSE.

The army of China comprises—

1. The Eight Banners, nominally containing about 300,000 men, descendants of the Manchu conquerors and their allies. The number maintained on a war footing is from 80,000 to 100,000. The whole force is subdivided into three groups, consisting, respectively, of Manchus, Mongols, and Chinese, and forms a sort of hereditary profession within which intermarriage is compulsory. About 37,000 are stationed in garrisons in Manchuria; the Imperial Guard at Pekin contains from 4,000 to 6,000.

2. The Ying Ping, or National Army, called also the Green Flags and the Five Camps (five being the unit of subdivision). This army consists of 18 corps, one for each province, under the governor or governor-general. The nominal strength is from 540,000 to 660,000 men, of whom about 200,000 are available for war, never more than one-third being called out. The most important contingent is the Tientsin Army Corps, nominally 100,000 strong, really about 35,000, with modern organization, drill, and arms, employed in garrison duty at Tientsin, and at Taku and other forts.

Besides these forces there are mercenary troops, raised in emergencies, and Mongolian and other irregular cavalry, nominally 200,000 strong, really about 20,000, but of no military value. The total land army on peace footing is put at 300,000 men, and on war footing at about 1,000,000, but the army, as a whole, has no unity or cohesion; there is no proper discipline, the drill is mere physical exercise, the weapons are long since obsolete, and there is no transport, commissariat, or medical service.

The Chinese navy, during the war with Japan, disappointed those who regarded it as an effective fighting force. At the opening of hostilities, on July 25, 1894, when the *Kowshing* transport was sunk, an engagement took place between the Japanese cruiser *Yoshino* and the *Tai Yuen*, with other vessels, and the small Chinese cruiser *Kuang Yi* was driven ashore and destroyed. In the battle of the Yalu (September 17), or in immediate consequence of that action, the barbette armor-clad *King Yuen*, 2,850 tons, and the cruisers *Chih Yuen*, 2,300 tons, *Chao Yung*, 1,350 tons, *Yang Wei*, 1,350 tons, and *Kuang Ki*, 1,030 tons, were sunk or burned. Subsequently, at Wei Hai Wei, the barbette ship *Ting Yuen* and the cruiser *Ching Yuen* were sunk, and the armor-clad *Chen Yuen* was captured. The Chinese fleet is organized in district squadrons, which are severally raised and maintained by the provincial viceroys. At the conclusion of the war the *Chen Hai* and the *Kang Chi* alone remained to China of her effective Pei Yang squadron. Some smaller vessels had been put in hand of the torpedo class, and have since been added to the fleet. Among these are the torpedo cruisers *Feiyang*, 850 tons, and the *Feiting*, 1,000 tons. The small cruiser *Hai Yung*, 2,950 tons, has been launched at Stettin, where two sister ships are being constructed. Messrs. Armstrong launched a protected cruiser of 4,300 tons, the *Hai Tien*, in November, 1897, and have a sister ship in hand.

PRODUCTION AND INDUSTRY.

China is essentially an agricultural country, and the land is all freehold, held by families on the payment of an annual tax. Lands and houses are registered, and when a sale takes place the purchaser, on informing the district ruler, receives, besides the document given by the seller, an official statement of the transfer, for which he pays at the rate of 6 per cent of the purchase money. Land, however, can not be sold until all the near kindred have successively refused to purchase. The holdings are, in general, small; the farm animals are oxen and buffaloes; the implements used are primitive; irrigation is common. Horticulture is a favorite pursuit, and fruit trees are grown in great variety. Wheat, barley, maize, and millet, and other cereals, with pease and beans, are chiefly cultivated in the north, and rice in the south. Sugar, indigo, and cotton are cultivated in the south provinces. Opium has become a crop of increasing importance. Tea is cultivated exclusively in the west and south, in Fu Chien, Hupei, Hu Nan, Chianghsi, Cheh Chiang, Anhui, Kuangtung, and Szech'wan. The culture of silk is equally important with that of tea. The mulberry tree grows everywhere, but the best and the most silk comes from Kuangtung, Szech'wan, Cheh Chiang, and Kiangsu. An important feature in the development of the Chinese industries is the erection of cotton mills in Shanghai, and of silk filatures in Shanghai, Canton, and elsewhere. Two native cotton mills were started in 1890, and recently four foreign mill companies have been successfully floated.

All the eighteen provinces contain coal, and China may be regarded as one of the first coal countries of the world. The coal mines at Kaip'ing, northern Chihli, under foreign supervision, have been very productive. At Hankow coal mines have also been worked. There are also considerable stores of iron and copper remaining to be worked, and in Yunnan Japanese mining engineers have been employed to teach the people how to apply modern methods to copper mining, which is an industry of some antiquity in that province.

COMMERCE.

For details of commerce see statements of imports and exports in accompanying tables.

INTERNAL COMMUNICATIONS.

China is traversed in all directions by numerous roads, and, though none are paved or metaled, and all are badly kept, a vast internal trade is carried on partly over them, but chiefly by means of numerous canals and navigable rivers. The railway from Tientsin to Pekin, a distance of 73 miles, has been completed, and was opened to public traffic on June 30, 1897. The construction of the Shanghai-Woosung railway (12 miles) has already been commenced, and will be completed by the spring of 1898. A small railway was constructed from the Kaip'ing mines for conveyance of coal to Hokau, situated on the Petang, a river 10 miles north of the Peiho, and was subsequently extended to deep water on the Petang. A continuation has been completed from Petang, via Taku, to Tientsin and Linsi, and is being carried on to Shanhaikwan. The imperial Chinese telegraphs are being rapidly extended all over the Empire. There is a line between Pekin and Tientsin, one which connects the capital with the principal places in Manchuria up to the Russian frontier on the Amur and the Ussuri; while Newchang, Chifu, Shanghai, Yangchow, Suchau, all the seven treaty ports on the Yangtze, Canton, Wuchau, Lungchau, and all the principal cities in the Empire are now connected with each other and with the capital. The line from Canton, westerly, has penetrated to Yunnanfu, the capital of Yunnan Province, and beyond it to Manwyne, near the borders of Burmah. Shanghai is also in communication with Fuchau, Amoy, Kashing, Shaoshing, Ningpo, etc. Lines have been constructed between Fuchau and Canton, and between Taku, Port Arthur, and Seoul, the capital of Korea, and the line along the Yangtze Valley has been extended to Chungking, in Szechuen Province. By an arrangement recently made with the Russian telegraph authorities the Chinese and Siberian lines in the Amur Valley were joined in the latter part of 1882, so that there is now direct overland communication between Pekin and Europe.

The postal work of the Empire is carried on, under the minister of war, by means of post carts and runners. In the eighteen provinces are 8,000 offices for postcards, and scattered over the whole of the Chinese territories are 2,040 offices for runners. There are also numerous private postal couriers, and during the winter a service between the office of the foreign customs at Pekin and the

outports. The imperial Chinese post-office was opened on February 2, 1897, the management being confided to the inspector-general of the imperial maritime customs. China has also notified the Swiss Government of her intention of joining the Universal Postal Union.

MONEY, WEIGHTS, AND MEASURES.

The sole official coinage and the monetary unit of China is the copper cash, of which about 1,600—1,700 = 1 haikwan tael, and about 22 = 1 penny. The silver sycee is the usual medium of exchange. Large payments are made, by weight, of silver bullion, the standard being the liang or tael, which varies at different places. The haikwan (or customs) tael, being one tael weight of pure silver, was equal in October, 1896, to 3s. 4½d., or 5.95 haikwan taels to a pound sterling.

By an imperial decree, issued during 1890, the silver dollar coined at the new Canton mint is made current all over the Empire. It is of the same value as the Mexican and the United States silver dollars, and as the Japanese silver yen. Foreign coins are looked upon but as bullion, and usually taken by weight, except at the treaty ports.

WEIGHT.

10 sze	= 1 hu.
10 hu	= 1 hao.
10 hao	= 1 li (nominal cash).
10 li	= 1 fun (candaren).
10 fun	= 1 tsien (mace).
10 tsien	= 1 liang (tael) = 1½ oz. avoirdupois by treaty.
16 liang	= 1 kin (catty) = 1½ lbs. avoirdupois by treaty.
100 kin	= 1 tan (picul) = 133½ lbs. avoirdupois by treaty.

CAPACITY.

10 ko	= 1 sheng.
10 sheng	= 1 tou (holding from 6½ to 10 kin of rice and measuring from 1.13 to 1.63 gallons). Commodities, even liquids, such as oil, spirits, etc., are commonly bought and sold by weight.

LENGTH.

10 fun	= 1 tsun (inch).
10 tsun	= 1 chih (foot) = 14.1 English inches by treaty.
10 chih	= 1 chang = 2 fathoms.
1 li	= approximately 3 cables.

In the tariff settled by treaty between Great Britain and China, the chih of 14½ English inches has been adopted as the legal standard. The standards of weight and length vary all over the Empire, the chih, for example, ranging from 9 to 16 English inches, and the chang (= 10 chih) in proportion, but at the treaty ports the use of the foreign treaty standard of chih and chang is becoming common.

VALUE OF HAIKWAN TAEI IN EACH YEAR FROM 1874 TO 1899.

The value of the Haikwan tael, obtained from the average price of silver for each year, as computed by the Director of the Mint, has been as follows: 1874, \$1.52242; 1875, \$1.47896; 1876, \$1.38588; 1877, \$1.43082; 1878, \$1.37331; 1879, \$1.338; 1880, \$1.36318; 1881, \$1.34796; 1882, \$1.35193; 1883, \$1.31993; 1884, \$1.32224; 1885, \$1.26797; 1886, \$1.18413; 1887, \$1.16602. Since 1887, the value of the Haikwan tael, as computed by the Director of the Mint on January 1 of each year, has been as follows: 1888, \$1.15,1; 1890, \$1.14,8; 1891, \$1.27; 1892, \$1.13,7; 1893, \$1.01; 1894, \$0.84,9; 1895, \$0.74,9; 1896, \$0.80,8; 1897, \$0.78; 1898, \$0.69,7.

CUSTOMS TARIFF OF CHINA.

[Published at Shanghai June 1, 1887, by order of the inspector-general of the customs and statistical department.]

MONEY, WEIGHTS, AND MEASURES.

MONEY: Tael = 72.2 cents (approximate value = 10 mace or 100 conderin or 1,000 cash).

WEIGHTS: Picul = 133½ pounds avoirdupois. Catty = 1½ avoirdupois.

LENGTH: Chang = 2 fathoms.

					Yellow metal (<i>see</i> Metals, copper, etc.).				

a Proportionate duty is to be charged on extra width in woollens.

NOTE.—The present tariff, in which the import and export divisions of the original tariff of 1858, and the lists of duty-free, of exceptional and of contraband goods have been amalgamated and arranged alphabetically is applicable in Chinese ports which, at different dates, have been opened to commerce. These ports, known as treaty ports, are the following: Shanghai, Nanking, Kelang, Taiwan, Ningpo, Foochow, Amoy, Canton, Swatow, Chinkiang, Chefoo, Newchwang, Tientsin, Hankau, Kiungchow, Tamsui, Takow, Ichang, Wenchow, Pakhoi, Kiukiang, Wuhu, and Chung King.

The assimilation of import with export duties results from the regulations annexed to the treaties concluded by China with Austria-Hungary, Belgium, Denmark, France, Germany, Great Britain, Italy, Japan, the Netherlands, Portugal, Spain, and the United States of America.

N. B.—Customs permits are necessary for the shipment and discharge of whatever is not allowed to accompany passengers as personal baggage, e. g., duty-free goods, treasure, parcels, etc., and all such articles must be entered on the manifest of the vessel concerned.

TREATY PORTS OF CHINA.

Tochau	Hunan	do	18,000			
Chinwang	Chihli	do	37,000			

NOTE.—Kowloon and Lappa are customs "stations" at which goods passing from Hongkong and Macao, respectively, to Canton pay customs duties, and are therefore included in the lists of ports where customs are collected, but are not usually classified as treaty ports. Kongmoon, Kumchuk, Shihing, and Takhing, on the West River, have been established as "stages" or "places of call" for the landing and shipping of passengers and goods by steamers furnished with a special six-months' river certificate.

[For value of standards of currency, weight, and measure, see page 2256.]

Population, 402,680,000; area, 4,218,401 square miles.

a English plain goods.—The falling off is entirely in gray goods (very largely in common T cloths), no doubt owing to the increased importation of Indian yarn, coupled with American competition.

b Indian goods and yarn.—In 1897 Indian imports were not kept separately by the customs. The importation of Indian goods was probably very small, but business in yarns had already become important; the weight imported in 1887 was probably about 300,000 piculs, since increased fourfold.

c American plain goods.—The increase of 121 per cent in quantity, as against an increase of only 59½ per cent in value, shows plainly that American manufacturers are now competing with Manchester in lower-grade goods, which formerly they did not touch; in fact that, whereas ten years ago America contented herself with simply exporting the surplus of her domestic manufactures, she is now laying herself out for direct competition with the Lancashire export trade.

d English fancy goods.—The discrepancy between increase in quantity and increase in value shows how the tendency of this trade is running in the direction of turning out common fancy goods to meet the Chinese requirement for cheapness.

e 1 picul = 133½ pounds.

f Indian yarn.—The difference between the percentages of increase in quantity and value shows how enormously the cheapness of Indian low-count yarns has stimulated this trade.

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

VALUE OF CARRYING TRADE FOR THE MONTH OF APRIL, 1898 AND 1899.
Distribution, by Flag of Carrying Vessel, of the Value of Imports and Exports of Merchandise.
